"Death in anonymity is the ultimate insult to human dignity."
— Kathy Reichs

Taceant colloquia. Effugiat risus. Hic locus est ubi mors gaudet
succurrere vitae.
Let conversation cease. Let laughter flee. This is the place where
death delights to help the living.
— Latin proverb

MANAGEMENT SUMMARY

Between February 21 and March 3, 2011 Chicora Foundation personnel conducted historical research and field assessments at cemeteries located at the Florida State Hospital in Chattahoochee, Florida. This institution is Florida's oldest mental institution, founded in 1876. Prior to that it served as Florida's first penitentiary from 1868 to 1876 and even earlier it was a U.S. army.

The work was funded by the Florida Department of Children and Families with assistance from the Florida Department of Corrections. The goal of the study was to compile historical documents concerning the various cemeteries used by the institutions on the property and evaluate the conditions of the various burial grounds. Another goal was to develop long-range preservation plans and recommendations for the properties.

Perhaps most significantly, this work was able to revise and supplement the map of Cemetery 3, as well as create a map for Cemetery 4. It was also possible to compile a list of burials in Cemeteries 2, 3, and 4. For the first time families will be able to obtain relatively complete and authoritative information concerning the burial of their loved ones at the Florida State Hospital.

The investigations were assisted by a ground penetrating radar study conducted by GEL Geophysics of Atlanta, Georgia under contract to Chicora Foundation.

The research identified five cemeteries. All of the hospital's cemeteries until recently were segregated by both sex and race. All had a simple, gridded organization and all appear to have received little thought about long-term care or needs.

Cemetery 1 (8GD138) is most likely associated with the penitentiary which is known to have had 26 deaths, although the names of only

three individuals are known. This cemetery was damaged by construction in the 1950s and again in 1978. Skeletal remains were encountered both times; these remains were in good condition and they have the potential to address a wide range of significant bioanthropological questions. The site is recommended eligible for inclusion on the National Register of Historic Places. Given the past damage to the site and the potential for future damage, we recommend that the burials be disinterred.

Cemetery 2 (8GD1001) began as a hospital cemetery in 1897 and ceased use in 1911. There is compelling evidence that the remains were disinterred in 1923 and reburied somewhere on the 75.9 acre Richardson Place. The ground penetrating radar study at this cemetery fails to reveal consistent anomalies, supporting the belief that the burials have been removed. Nevertheless, it is critical to verify the removal, as well as assess the effectiveness of the disinterments. It is also necessary to determine where these burials were relocated.

There is no conclusive evidence where the 579 deaths predating the establishment of Cemetery 2 are located, although one possibility is the southwest corner of Cemetery 3. This area includes some marked graves pre-dating 1897.

Cemetery 3 (8GD741) was begun about 1905 and continued in use until about 1927. This cemetery is also known to contain the graves of two Army officers who died during the construction of the U.S. Arsenal in Chattahoochee. Careful analysis of the records also reveals burials in this cemetery dating to at least 1885, suggesting that either early hospital burials occurred here or that burials were moved here from elsewhere. Cemetery 3 is recommended eligible for inclusion on the National Register of Historic Places. Our recommendations focus on making the cemetery accessible, maintaining the property's historical

integrity, and ensuring that it represents a place of dignified and proper burial.

Cemetery 4 (8GD1002) was begun about 1926 and continued until about 1931. In most respects this cemetery was very similar to Cemetery 3. Although more recent than Cemetery 3, Cemetery 4 slipped very quickly into obscurity. Shortly after it was closed, several families sought to move their loved ones from this location to Cemetery 5 so they would be more accessible. Cemetery 4 is recommended eligible for inclusion on the National Register of Historic Places. Our recommendations here also focus on issues of accessibility, vegetation removal, and long-term management as a cemetery.

Cemetery 5 (8GD1003), which began use in 1931, is still being used by the Florida State Hospital and, as such, it is in the best condition of the cemeteries examined. Nevertheless, we have recommended improvements in maintenance and management.

Our recommendations are broken into three priorities. Priority 1 items are those activities that should be done during the 2011-2012 or 2012-2013 fiscal years. Priority 2 items should be conducted during the fiscal years 2013-2014 or 2014-2015. Priority 3 items should be completed by end of the 2015-2016 fiscal year.

While the various activities considered critical for the long-term preservation of these cemeteries totals about \$366,550, Priority 1 items at Cemeteries 3-5 account for less than \$25,000. Priority 2 activities account for only \$52,900. Priority 3 tasks are minor, adding only an additional \$4,500. All of these activities can be readily integrated into existing budgets, even during these difficult economic times.

Of course, these figures do not include the most costly activities. Estimated at \$230,000, the removal of burials at Cemetery 2 will be an expensive activity. Nevertheless, after two episodes of disregard and damage, it is inappropriate to allow these burials to remain in an area where they are virtually certain to eventually be again disturbed.

An additional \$30,000 is budgeted for a study to attempt to ascertain where the burials

from Cemetery 2 were relocated. It is to be regretted that these funds must be spent, but unfortunately the Florida State Hospital failed to document the reinterment location in 1923 – so the location has become lost over the years.

An additional \$20,000 is budgeted to permit a final and conclusive determination on the presence of human remains in Cemetery 2. This funding is based on the ground penetrating radar identifying several anomalies. These may be unmoved burials, trees, or even holes excavated for the removal process. Only an archaeological study will be able to identify the nature of the anomalies. This work is critical since in the future this area will continue to be developed.

Introduction

In November 2010 Ms. Jennifer Wood with the Land Administration and Utilities Division of the Florida Department of Corrections (DC) contacted Chicora explaining that they had identified a cemetery on their property in Chattahoochee, Florida and requested advice on how to handle the discovery. As discussions progressed, we determined that there were actually several cemeteries, and the Florida Department of Children and Families (DCF) were also involved since they had one or more cemeteries on their property.

Eventually an agreement was signed between Chicora and DCF to conduct a cemetery assessment of the various properties. This work was to involve not only the assessment of needs and development of a preservation plan for the cemeteries on DCF and DC property, but it would involve historic research and the use of ground penetrating radar (GPR) to assist in determining boundaries on several of the cemeteries.

Initial background research was conducted from February 18-19, 2011. This included on-line research, examination of a large amount of materials already gathered and forwarded to us by Ms. Wood, and information obtained from the Division of Historic Resources. A total of 16 person hours were devoted to this work.

The assessment was conducted from February 21 through March 3, 2011 by the authors, Michael Trinkley, Debi Hacker, and Nicole Southerland. The work involved 117 person hours of historic research at the Florida Archives of Florida and the State Library of Florida. The field investigations were conducted from February 27 through March 2. This work involved 33 person hours and included not only investigations at the various cemeteries, but also further research into

the records still housed by the Florida State Hospital.

This assessment ultimately examined five cemeteries associated with the Florida State Hospital including one on the River Junction Work Camp grounds leased to DC by DCF (identified as Cemetery 1), one on the hospital grounds (identified as Cemetery 2), and three east of Chattahoochee (identified as Cemeteries 3-5).

Chattahoochee

Chattahoochee is a small town in the northwest corner of Gadsden County, situated in the Florida panhandle. It borders the Florida-Georgia state line to the north, the Apalachicola River to the west, Liberty County and Lake Talquin on the south, and the Ochlockonee

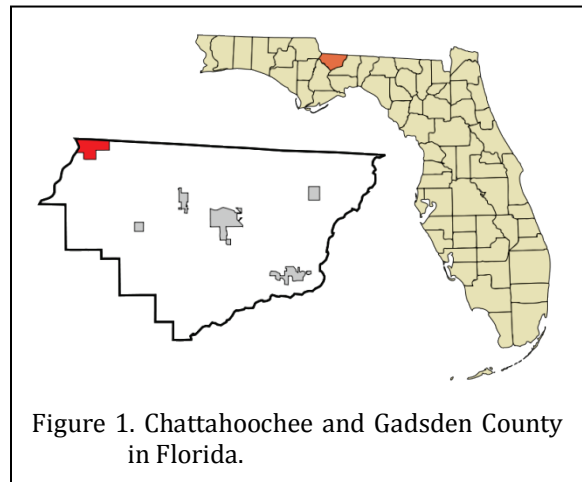

Figure 1. Chattahoochee and Gadsden County in Florida.

River on the east. Quincy, which is on US 90 about midway between Pensacola and Jacksonville, is the county seat. Chattahoochee is north of I-10 and about 45 miles west of Tallahassee. Chattahoochee is part of the Tallahassee, Florida Metropolitan Statistical Area that consists of Gadsden, Jefferson, Leon, and Wakulla counties.

Most of Gadsden County is located within the Tallahassee Hills physiographic region. Named by Cooke (1939) to identify the series of topographic hills lying between the Georgia line on the north and the coastal terraces closer to the Gulf on the south. The region extends from the Withlacoochee River on the east to the Apalachicola River on the West. The region is thought to be of deltaic origin, with hill tops composed largely of resistant clayey sands, silts, and clays (Vernon 1951). Others have called this region the Tifton Uplands District (Weatherspoon and Liudahl 2009). That is further divided into the Tallahassee Hills subregion to the east and the Apalachicola Bluffs and Ravines.

In Gadsden County, elevations range from about 100 feet above mean sea level (AMSL) in the southern portion of the county to nearly 330 feet AMSL near the Florida-Georgia line. In Chattahoochee elevations range from at least 150 to 235 feet AMSL.

Why Preserve The Nature and Value of Cemeteries

Cemeteries are different from all other types of historic sites. Most fundamentally they contain the physical remains of past generations and are considered sacred, consecrated ground. The right to a decent burial has long been recognized in common law. So, too, is the duty to continue a cemetery once begun. Thus a governmental entity, opening a cemetery, creates a duty of the entity through its officials to execute the trust and maintain the cemetery for the benefit of the public, those buried there, and their descendants.

Cemeteries are also artistic sites, such as a sculpture garden or outdoor museum that contains a collection of three-dimensional artifacts. The monuments trace changes in both designs and social attitudes toward religious and moral views, death and eternity. They provide examples of the largely disappeared art of stone carving, illustrating numerous famous artisans.

They are permanent collections, but must be considered finite and irreplaceable.

Even institutional cemeteries exhibit changing styles of markers and these may reflect changes in administration and the history of the agency. While the markers used may not be “high style” and may even be “vernacular,” they remain artifacts worthy of protection.

These collections are archives, having the same value and importance to the community as any archives. They are storehouses of genealogical information that often cannot be identified through any other means. They provide information concerning both the individual and collective pasts.

Part of this archive is the archaeological and bioanthropological information they contain – even if the site is never excavated. The graves and tombs can provide information on mortuary behavior, such as the coffins and hardware chosen either by the agency or by relatives. The human remains can provide information on diet, disease, and burial practices – information that is available from no other source.

Cemeteries are also scenic landscapes, similar to parks or open spaces, except they are much more. They are far more fragile and susceptible to damage and deterioration. As such, they require distinctly different care.

Thus, cemeteries are important social, historic, architectural, and archaeological artifacts. When there is little else physically remaining of a community’s earliest history, there will often be a cemetery that provides a unique tie to the community’s collective past that would otherwise be lost.

Statutory Requirements

Chapter 253, *Florida Statutes* (“State Lands”) directs that agencies prepare plans that describe how “fragile non-renewable resources, such as archaeological and historic sites” will be managed. Chapter 267, *Florida Statutes* also requires agencies to administer historic resources

“in a spirit of stewardship and trusteeship.” According to 267.061(2), *Florida Statutes*, agencies are given a broad range of responsibilities in the care of historic properties, including the need to consider the effect of their undertakings on these properties, to establish a program to locate these sites, and to ensure that the resources are not allowed to deteriorate.

Florida law requires that the management of state lands ensure that the use of the property is “minimally destructive of resource values” and while this may be easily evaluated in the context of an archaeological or historical site, it is not so simple when dealing with cemeteries since they are far more complex.

For example, while allowing an archaeological site to grow up in woods is often an appropriate means of green-spacing, allowing a cemetery to revert to woods is generally not appropriate. Silvicultural management may result in damage to graves, loss of grave markings, and a drastic reduction in the value of the cemetery landscape. Cemeteries, by their very nature, also require careful archival management of associated records. If those records become lost or fragmented, then the integrity of the cemetery itself suffers.

Preservation or Restoration?

Individuals often speak in terms of “restoring” a particular resource, such as a cemetery. Preservation, however, is *not* restoration. Restoration means, very simply, making something “like new.” Restoration implies dramatic changes of the historic fabric, including the elimination of fabric that does not “fit” the current “restoration plan.” Restoration is inherently destructive of patina and what makes a property historic in the first place. The “restorer” of a property too often knows little of the Secretary of the Interior’s Standards for Preservation and may care even less.

One of the most important early writings was that of nineteenth century art critic and observer John Ruskin. In *The Seven Lamps of Architecture* published in 1849 and in particular,

“The Lamp of Memory,” Ruskin introduces us to the issue of trusteeship where he explains,

it is again no question of expediency or feeling whether we shall preserve the buildings of past times or not. We have no right whatever to touch them. They are not ours. They belong partly to those who built them, and partly to all the generations of mankind who are to follow us.

Ruskin also crisply stated the difference between restoration and repair, noting that “restoration” means,

the most total destruction which a building can suffer: a destruction out of which no remnants can be gathered: a destruction accompanied with false description of the thing destroyed.

In contrast, preservation (or conservation for that matter) can be defined as preventing or delaying loss, depletion, waste, or harm. Preservation seeks to limit natural deterioration.

Preservation will respect the historic fabric, examine the variety of options available, and select those that pose the least potential threat to the property. Preservation (as well as conservation) will ensure complete documentation, whether it is of cleaning, painting, or repair. Preservation treatments will ensure that the work done today does not affect our ability to treat the object tomorrow.

Preservation Fundamentals

Preservation is not an especially difficult concept to grasp, although the key principles are not always clearly articulated. The fundamental concepts are well presented in the Secretary of the Interior’s Standards for Preservation (see Table 1).

This document reminds us – at least at a

general level – of what caregivers need to be thinking about as they begin a cemetery preservation plan. Those responsible for the care of the hospital cemeteries should be intimately familiar with the eight critical issues it outlines.

For example, all other factors being equal, a cemetery should be used as a cemetery – not to walk dogs, not as a playground, not to store equipment, and not as a park. And until the caregivers are able to do what needs to be done, it is their responsibility to make certain that the site is preserved – it must not be allowed to suffer damage under their watch.

Caregivers must work diligently to understand – and retain – the historic character of the cemetery. In other words, they must look at the cemetery with a new vision and ask themselves, “what gives this cemetery its unique, historical character?” Perhaps it is the landscape, the old and stately trees, the large boxwoods, or the magnificent arborvitae. Perhaps it is the very large proportion of complex monuments, or the exceptional hand-made markers. It may simply be that it is a unique representation of a cemetery type rarely seen in a rapidly developing urban setting. Whatever it is, those undertaking its care and preservation become the guardians responsible for making certain those elements are protected and enhanced (whether they are particularly appealing to the caregivers or not).

Whatever conservation efforts are necessary must be done to the highest professional standards; these conservation efforts must be physically and visually compatible with

Table 1.
Secretary of the Interior’s Standards for Preservation

1. A property will be used as it was historically, or be given a new use that maximizes the retention of distinctive materials, features, spaces, and spatial relationships. Where a treatment and use have not been identified, a property will be protected and, if necessary, stabilized until additional work may be undertaken.
2. The historic character of a property will be retained and preserved. The replacement of intact or repairable historic materials or alteration of features, spaces, and spatial relationships that characterize a property will be avoided.
3. Each property will be recognized as a physical record of its time, place, and use. Work needed to stabilize, consolidate, and conserve existing historic materials and features will be physically and visually compatible, identifiable upon close inspection, and properly documented for future research.
4. Changes to a property that have acquired historic significance in their own right will be retained and preserved.
5. Distinctive materials, features, finishes, and construction techniques or examples of craftsmanship that characterize a property will be preserved.
6. The existing condition of historic features will be evaluated to determine the appropriate level of intervention needed. Where the severity of deterioration requires repair or limited replacement of a distinctive feature, the new material will match the old in composition, design, color, and texture.
7. Chemical or physical treatments, if appropriate, will be undertaken using the gentlest means possible. Treatments that cause damage to historic materials will not be used.
8. Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken.

the original materials; these conservation efforts must not seek to mislead the public into thinking that repairs are original work; and the conservation efforts must be documented for future generations. If the caregivers aren’t conservators, it is their responsibility as the stewards of the property to retain a conservator appropriately trained and subscribing to the Code of Ethics and Standards of Practice of the American Institute for Conservation (AIC).

The Secretary of the Interior reminds those responsible for the resources that each and every cemetery has evolved and represents different styles and forms. Few, if any, cemeteries are “frozen in time.” It is the responsibility of care-givers to care for all of these modifications and not seek to create a “Disney-land” version of the cemetery, tearing out features that don’t fit into their concept of what the cemetery “ought” to look like.

Likewise, caregivers are reminded that there will be designs, monuments, and other features that characterize the cemetery – and the caregivers are responsible for identifying these items and ensuring their preservation. Caregivers must be circumspect in any modifications, ensuring that they are not destroying what they seek to protect (a problem with virtually all “restoration” efforts).

Before acting, those responsible for preservation are required as good and careful stewards to explore and evaluate the property, determining exactly what level of intervention – what level of conservation – what level of tree pruning – is actually necessary. And where it is necessary to introduce new materials – perhaps a pathway – into the cemetery, they must do their best to make certain these new elements are not only absolutely necessary, but also match the old elements in composition, design, color, and texture. In other words, if the cemetery has soil pathways, they would be failing as good stewards if they allowed concrete pathways – especially if the only justification was because concrete was less expensive or easier to maintain.

Where conservation treatments are necessary, the Secretary of the Interior tells stewards that they must be the gentlest possible. However phrased – less is more – think smart, not strong – caregivers have an obligation to make certain that no harm comes to the resource while under their care. And again, one of the easiest ways to comply is to make certain that caregivers retain a conservator subscribing to the ethics and standards of the American Institute for Conservation.

Finally, the caregivers must also recognize that the cemetery is not just a collection of monuments and the associated landscape – the cemetery is also an archaeological resource. They must be constantly thinking about how their efforts – whether to repair a monument, put in a parking lot, or resurface a path – will affect the archaeological resources – archaeological resources that are the remains of people buried at the cemetery by their loved ones.

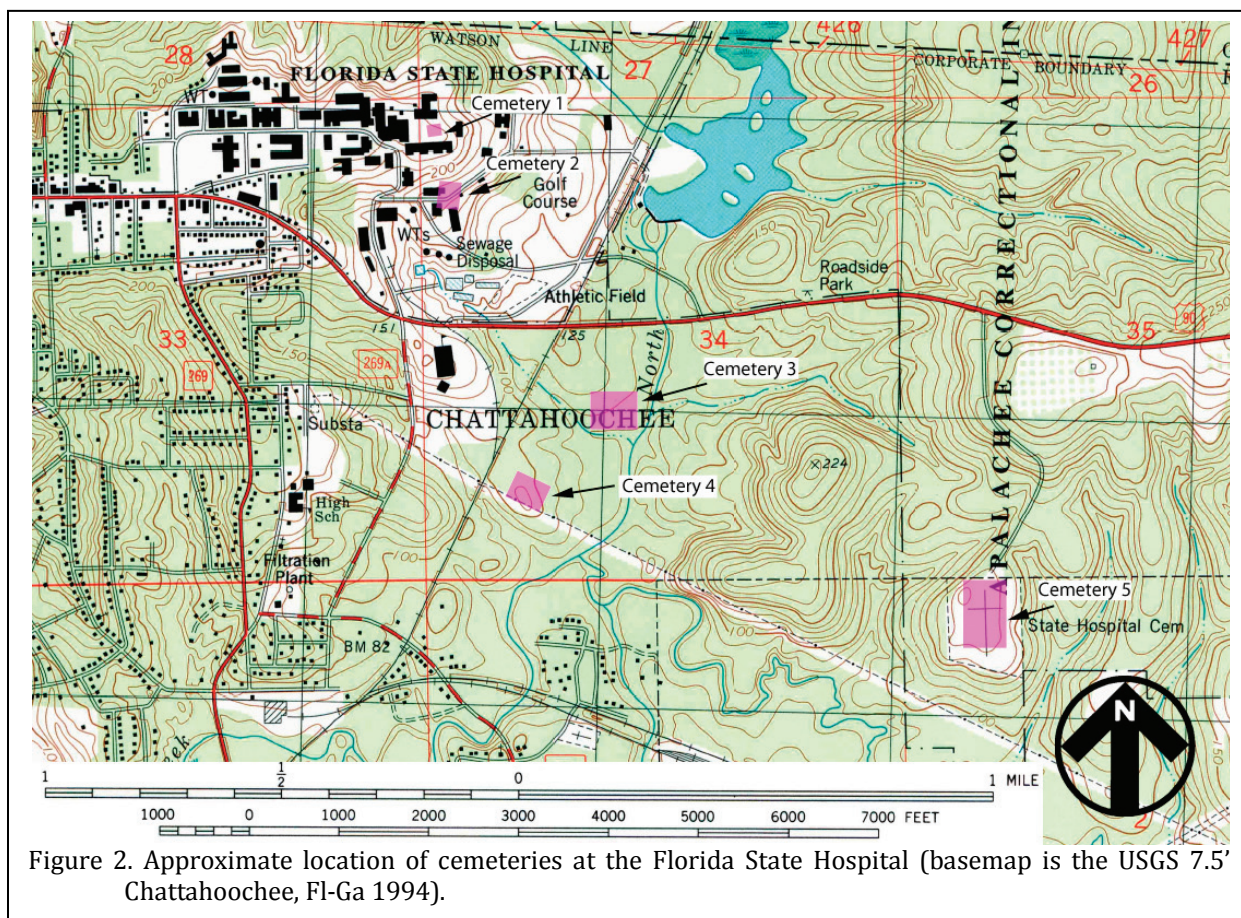

Our first recommendation, therefore, is that those assuming care for the cemeteries, become thoroughly familiar with the Secretary of the Interior’s Standards for Preservation and reaffirm their responsibility as stewards of these historical resources to ensure that future preservation efforts are consistent with sound preservation principles and practices. These standards must become “talking-points” for all future discussions and decisions made concerning the cemeteries.

The Cemeteries, Their Setting, and Context

As previously explained, this study eventually incorporated five different cemeteries. All of these properties are found within Census Tract 204 in Gadsden County. This is essentially the northwestern quadrant of the county west of Gretna and north of Greensboro.

Cemetery 1 is posited to be that burial ground used by the Florida Penitentiary from about 1868 through 1876. It is situated on tract 1-34-4N-6W-0000-00200-0100 (Figure 3) listed in the name of the Florida State Hospital, although it is occupied by River Junction Work Camp, part of the Apalachee Correctional Institution. Since the boundaries of this cemetery are not well established, it may extend westward into tract 1-33-4N-6W-0000-00110-0000. This burial ground has been impacted by the construction of several structures, as well as other prison facilities.

Cemetery 2 was recorded in some detail in 1923 and therefore its placement is well established on Florida State Hospital tract 1-34-4N-6W-0000-00200-0100 south of River Junction and the structure known historically as the “Negro Building” (today Structure 37; Figure 4). This cemetery was used between about 1897 and 1904, but may have been moved in the late 1930s. There is still the possibility that human remains exist on the tract. Unfortunately, most of this cemetery has been extensively developed. Many of the buildings and the roads suggest considerable grading or excavation prior to

construction.

Cemetery 3 was begun immediately after the abandonment of Cemetery 2 and is thought to date from about 1904 through 1928. It is situated on parcel 1-34-4N-6W-0000-00100-0100 (Figure 5). While the property card identifies the property as owned by the Florida State Hospital, technically it is owned by the State of Florida Trustees of the Internal Improvement Fund (TIITF). Both DCF and DC lease their lands from TIITF. This cemetery is still intact although heavily wooded. Graves are distinct and many are still marked. The identification of graves is relatively easy and it is possible to ascertain with some accuracy the names of individuals in specific graves.

Cemetery 4 was used from about 1928 through 1931. A few burials have been disinterred from this cemetery and reburied at Cemetery 5 (as have, inexplicably, a few burials from Cemetery 2).

It is also situated on parcel 1-34-4N-6W-0000-00100-0100 (Figure 5). A power line easement has been cut through the southern edge of this cemetery. These graves are generally not well marked, but are quite distinct and easily recognizable.

Cemetery 5, begun about 1931, is still being used today. It is situated on parcel 2-02-3N-6W-0000-00220-0000 (Figure 6), although the access road cuts through tract 1-35-4N-6W-0000-00500-0000. Both parcels are listed as owned by DC but the cemetery is managed and maintained by the Florida State Hospital.

The Gadsden County Department of Growth Management identified Cemeteries 1 through 4 as falling into their land use category of "municipal." Cemetery 5 is in an area identified as "public" with agricultural 3 land use to the south.

northern edge of the cemetery, where whites were buried, and slopes down to an elevation of about 85 feet AMSL where African American patients were buried.

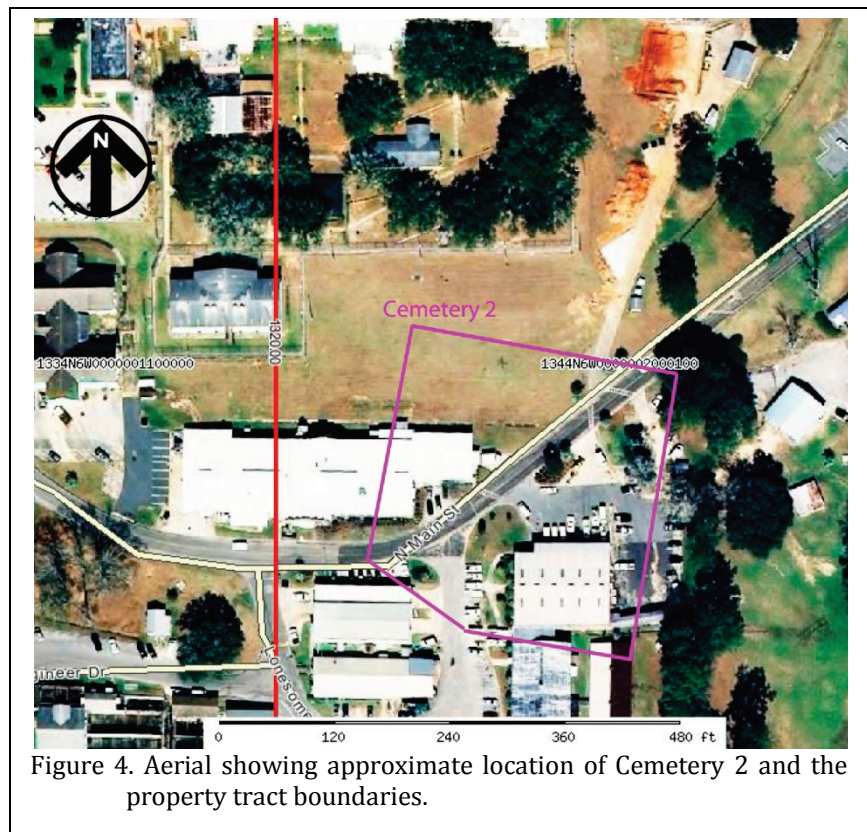

To the south, Cemetery 4 is situated on a southeast facing ridge top. Elevations in the center of the hill are about 110 feet AMSL. The topography drops to the north, south, east, and west where elevations are typically about 90 feet AMSL.

The still active Cemetery 5 is situated on a south facing ridge overlooking South Mosquito

As Figures 3-6 illustrate, these cemeteries are either situated in areas of the hospital and associated prison facilities that are heavily developed already or they are in fairly rural areas with little adjacent development.

The original topography in the vicinity of Cemetery 1 is difficult to determine although it appears to have been at the eastern edge of an east-west running ridge, at an elevation of about 220 feet above mean sea level (AMSL). In contrast, Cemetery 2 was on the southern slope of this ridge, at an elevation of about 180 to 200 feet AMSL.

Cemetery 3 is situated in an area of relatively poor drainage. Elevations range from about 95 feet AMSL at the

Figure 5. Aerial showing approximate location of Cemeteries 3 and 4, and the property tract boundaries.

Creek. Elevations in this area range from about 100 feet along the eastern edge of the cemetery where there is a slope into an intermittent creek to about 120 feet at the western edge.

Elevation can affect cemetery preservation in a variety of ways. Slopes can promote erosion and limit access; low areas with poor drainage may affect the preservation of wood markers; elevation differences can also make it more difficult to detect trespassers.

A variety of soils are represented at the different cemeteries, largely based on their

topographic setting (Weatherspoon and Liudahl 2009). Cemetery 1 consists primarily of Orangeburg and Norfolk soils. These soils are generally well drained and exhibit moderate permeability. Plowed Orangeburg soils have an Ap horizon of brown (7.5YR 4/4) loamy sand about 0.5 foot in depth. This overlies an E horizon to a depth of about 0.9 foot that consists of a reddish brown (5YR 4/4) loamy sand. The Bt1 horizon of red (2.5YR 4/8) sandy clay loam is found to about 2.8 feet. Below this is a Bt2 horizon of red (2.5YR 4/6) sandy clay loam, often to a depth of 4.6 feet. The Norfolk sands are similar with an Ap horizon about 0.5 foot in depth consisting of a brown

Figure 6. Aerial showing approximate location of Cemetery 5 and the property tract boundaries.

(10YR 4/3) loamy fine sand. The E horizon is missing and instead the Norfolk soils go directly into a Bt1 horizon of strong brown (7.5YR 5/6) sandy loam to a depth of about 0.9 foot. This is followed by the Bt2 horizon of strong brown (7.5YR 5/6) sandy clay loam to a depth of 2.1 feet. The Bt3 horizon extends to 3.7 foot and consists of a strong brown (7.5YR 5/6) sandy loam.

Cemetery 2 is found in an area of moderately well drained soils with moderate to slow permeability. The soils are classified as the Cowarts-Nankin Complex with 8-15% slopes. The Cowarts soils have an Ap horizon of dark brown (10YR 3/3) loamy fine sand that is perhaps 0.3 foot in depth. The underlying BE horizon, to a depth of about 0.7 foot, consists of a strong brown (7.5YR 5/6) fine sandy loam and this overlies a Bt1 horizon of strong brown (7.5YR 5/8) sandy clay loam to 1.3 feet. The Bt2 horizon extends to 2.4 feet below surface and is a yellowish red (5YR 5/8) sandy clay loam. The Bt3 horizon extends to 3.3 feet and is a strong brown (7.5YR 5/6) sandy

clay loam. The Nankin soils are somewhat less complex. An Ap horizon about 0.7 foot in depth consists of dark grayish brown (10YR 4/2) sandy loam. This lies over a Bt1 horizon of strong brown (7.5YR 5/6) sandy clay loam to about 1.1 feet. The Bt2 horizon is found to 2.3 feet and consists of a yellowish red (5YR 5/6) sandy clay. The Bt3 horizon is a mix of red (2.5YR 4/6), light yellowish brown (2.5Y 6/4), and yellowish red (5YR 5/6) sandy clay loam to a depth of 3.2 feet.

Cemetery 3 consists primarily of the Ousley, Rutlege and Pinckney soils in the lower elevations

with Telogia sandy loams on higher elevations. The Ousley, Rutlege, and Pinckney soils are classified as somewhat poorly drained. While there is generally no ponding of water, the soils may be flooded from December through April and from August through September. A seasonal high water table may be found at 3 feet and this undoubtedly limited the ability to satisfactorily bury individuals in some parts of the cemetery. The Telogia sandy loams are classified as somewhat poorly drained and they, too, may exhibit seasonal water tables that would limit burials.

The Ousley, Rutlege and Pinckney soils are all fundamentally similar. The Ousley and Rutlege soils have fairly shallow (0.8 to 1.1 feet) A horizon soils that range from a gray (2.5Y 6/1) to black (10YR 2/1) sand. These overlie a C horizon that may vary from a light yellowish brown (2.5Y 6/4) to a dark gray (10YR 4/1) sand, depending on drainage. The Pinckney soils have a somewhat

better developed A horizon that may extend to a depth of 2.9 feet and consist of a black (10YR 2/1) sand. The Telogia soils have an A horizon 0.5 foot in depth that consist of very dark gray (10YR 3/1) sandy loam. Below this is a Bt1 horizon of light olive brown (2.5Y 5/3) clay loam to about 1.5 feet. A Bt2 horizon extends to 2.1 feet and is a similar light olive brown (2.5Y 5/3) clay loam. The Bt3 horizon is found to 2.9 feet and also consists of a light olive brown (2.5Y 5/3) clay loam

Cemetery 4 consists entirely of the Cowarts-Nankin Complex, similar to Cemetery 2 except that at Cemetery 4 the slopes are from 2-5%.

Finally, the soils at Cemetery 5 consist primarily of Orangeburg loamy sand on 2-5% slopes.

Cemeteries 1, 2, 4, and 5 are not within the FEMA identified 100 or 500 year flood zones, although access to Cemetery 4 would likely be cut off by a 100 year flood event. Most of Cemetery 3, however, is within the flood zone (Figure 7). So, too, is the current access road for Cemetery 3.

Gadsden County is not likely to be affected by hurricane surge events, although some property may be at risk from a storm surge that is pushed through the Apalachicola River from the Gulf of Mexico. The potential for these cemeteries to be affected is unknown.

As previously mentioned, the Florida State Hospital cemeteries are situated in Census Tract 204 of Gadsden County. This is a relatively poor area of Florida. While the state's household median income is \$38,819, Gadsden County's is only \$31,248, and in the census tract the median income is slightly lower, \$30,969. Moreover, while statewide only 12.5% of the individuals are below the poverty level, 18.6% are below the poverty level in Tract 204. This is actually slightly lower than for the county as a whole, where it is 19.9%.

Although Florida is certainly ethnically

Figure 7. FEMA flood map for the area of Cemeteries 3 and 4.

diverse, this diversity is clustered. For example, statewide 78% of the population is white. Gadsden County, however, has a very large African American population and only 37.8% is identified as white. Gadsden is, in fact, the only predominantly African-American county in Florida. In Census Tract 204 51.1% of the population is identified as white and 45.7% is listed as African American.

The median value of housing in Census Tract 204 is \$52,300 and 73% are owner occupied. Countywide the median value is \$70,100 and statewide it is \$105,500. The population in the vicinity of the cemeteries is fairly stable with nearly two-thirds of the residents in 2000 living in the same house for the past five years.

Just under 80% of Florida residents are high school graduates. About 70.7% of Gadsden County residents have a high school education and 73% of those in Census Tract 204 have a high school degree. Relatively few, however, have a college education (7.8%).

Florida's economy, like much of the

United States, has been affected by the recent recession with unemployment state-wide at 11.8% (January 2011, seasonally unadjusted). Gadsden County, however, has demonstrated some stability and the unemployment rate there is slightly lower at 10.9%.

Florida's 2009 violent crime rates (the most recent data available) are somewhat higher than nationwide, at 604.9 per 100,000, compared to 429.4 nationwide. Gadsden County's rate of 867.2 per 100,000 is higher than the average for Florida and more than double the national average.

Of greater importance in terms of gauging the potential threat to the cemeteries are property crimes. This data is more reassuring. While the national average is 3,727 per 100,000 and Florida's rate is 3,792.7, the rate for Gadsden County is 1,718.4 per 100,000 – significantly less than either the national rate or the rate for Florida. In Gadsden County the rate is made up about equally of burglaries and larcenies.

The Florida State Hospital does have its own security department, in addition to the police department for the City of Chattahoochee and the Gadsden County Sheriff's Department.

Factors Affecting Landscape Character

As previously explained, most of Gadsden County falls into what has been called either the Tallahassee Hills or, more recently, the Tifton Uplands. The characteristics of this region change markedly from west to east and it contains a heterogeneous mosaic of mixed forest, pasture, and agricultural land. The region's gently-rolling hills having broad rounded summits and are situated between the low-lying Dougherty Plain to the north into Georgia and Gulf Coastal Lowlands further to the south.

Dendritic drainage of many surface streams dissects the hills and forms deeply incised valleys and ravines. The Tifton Upland ends abruptly at the Apalachicola River where bluffs

expose Miocene to Holocene sediments.

In the west there are few natural lakes, but many small ponds and reservoirs created on stream channels. Gadsden boasts only one spring, Chattahoochee Spring, in the August K. Gholson City Park, south of Boliver Road and U.S. 90. This small spring drains into a concrete enclosure that was once used for swimming. From there it drains into the Apalachicola River (Scott et al. 1977:454-455)

The region is dominated by the Southern Mixed Forest. Presettlement forests were savanna woodland fire types and these survive today only as scattered relic (Kuchler 1964). Today the vegetation is largely post-logging, successional mixed pine-hardwoods. Climax vegetation is identified as medium-tall to tall forests of broadleaf deciduous and needleleaf evergreen trees. Most abundant are loblolly pine, shortleaf pine, and other southern yellow pine species. Common associates include oak, hickory, sweetgum, blackgum, red maple, and winged elm. Dogwood, viburnum, and numerous woody vines are common.

The climate in the vicinity of the studied cemeteries is characterized as humid subtropical. The average annual temperature is 67°F; in winter the average is 53°F, with an average minimum of 42°F in January. In summer, the average temperature is 80°F and the average daily maximum temperature is 90°F in July. The urban areas, however, serve to store heat so they can have temperatures 5 to 10°F higher than rural areas.

The total annual precipitation is typically in excess of 57 inches. Of this, 43 inches, or about 75%, usually falls in March through November, the growing season for most crops. Figure 8 reveals that while rainfall is in general adequate, significant droughts have occurred between 2007 and 2009. Florida's combination of strong solar heating and a nearby source of warm humid air flowing in from the Gulf of Mexico and the Atlantic Ocean creates a situation that encourages strong summer thunderstorms. The Gadsden County area has an average of 80 per year. Tornadoes,

occurring during similar weather conditions, are also numerous with an average of 46 per year in Florida.

The average growing season for the Gadsden County area is 307 days (generally between February 17 and December 21). Figure 9 shows that Gadsden County is entirely within Plant Hardiness Zone 8b (with minimum temperatures of 15 to 20°F).

Virtually all of Florida falls into the zone where hot climate grasses thrive. Typical turf grasses include Bermuda, Bahia, centipede, carpet, St. Augustine, and zoysia. Only Cemetery 5, however, exhibits a turf. The remainder of the properties are wooded with no evidence of a planned landscape.

A factor not only affecting the landscape but also stone preservation is the level of pollutants. Based on EPA monitoring in northern Florida, the annual mean of NO_2 is 0.09 ppm and the annual mean of SO_2 is 0.002 ppm. These levels result in acid rain (see Figure 10) and deterioration of marble and many sandstones.

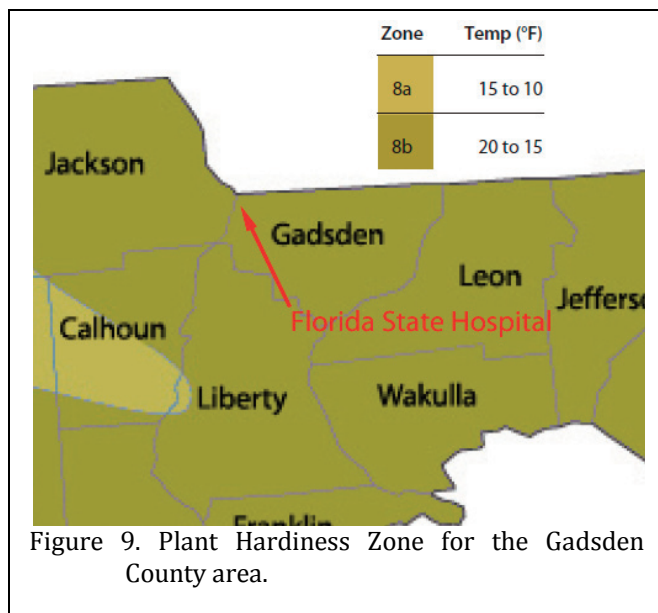

Figure 11 also reveals that very high

chloride levels dominate the Gadsden County area. These can lead to the corrosion of iron. This affects not only iron fences, but also the ferrous pins that were commonly used in die on base stones. While sea-salt certainly contributes to these levels, they also appear to be related to a variety of man-produced pollutants.

Brief Consideration of the Cultural Landscape

Where the spatial organization is obvious, such as at Cemeteries 3, 4, and 5, they all exhibit a formal grid arrangement, often with evidence of one or more narrow lanes dividing the landscape. At Cemeteries 3 and 4 much of this organization is difficult to detect without careful examination because the properties have been taken over by

vegetation.

All of the cemeteries reveal an arrangement that was typical of municipal and churchyard cemeteries because it maximized the available burial space. This arrangement was adopted by institutional (hospital and prison)

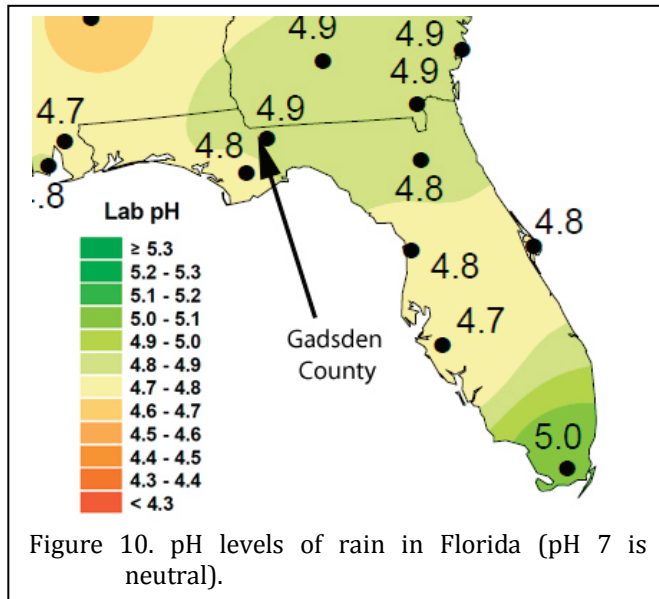

Figure 10. pH levels of rain in Florida (pH 7 is neutral).

cemeteries for similar reasons. In a similar fashion none of the burial grounds exhibit any clustering. Their internal arrangement is by race and sex, with burials in more-or-less date of death order.

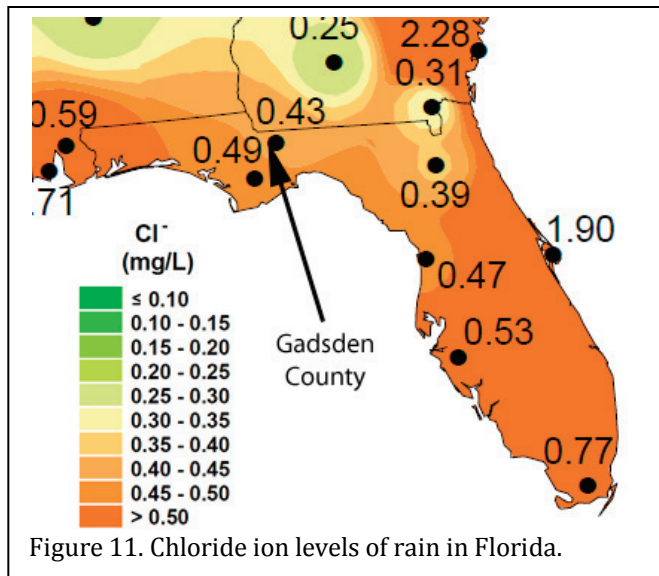

Figure 11. Chloride ion levels of rain in Florida.

The setting and environment of the cemeteries, at least in their original setting, also appears quite similar. All were placed at the outskirts of the institution. None were worked into the design or layout of the facilities. There are some differences in micro-environmental settings. For example, Cemetery 2 was established on a

relatively pronounced slope and Cemetery 3 was located on very low, wet ground. Both locations were likely considered waste tracts suitable for little else at the time they were selected. Today Cemeteries 1 and 2 are built over and are part of the urban hospital setting. Cemeteries 3-5, on the other hand, are clearly rural. Two (Cemeteries 3 and 4) are woodlots, while Cemetery 5 gives the appearance of a memorial park cemetery, absent the statuary and plantings.

The differences in settings are reflected in the different vegetation – urban versus rural. None of the cemeteries have clearly intentional plantings with the exception of some plantings lining the drives of Cemetery 5.

Topography of the cemeteries varies, but in general it appears that a relatively flat topography was sought in order to maximize burial space and minimize logistical issues. Cemetery 2 is the exception to this and it may be that this initial cemetery effort was a learning experience that directed future plots toward areas with easier access. Since none of the now closed cemeteries appear to have been maintained past their period of use, it seems unlikely that the topography was chosen to assist with long-term care. Similarly, the low topography of Cemetery 3 suggests that relatively little investigation of topography was conducted prior to the burial locations being selected.

Circulation (where it is still obvious) fits well with the formal, gridded design. The roads appear to be placed to serve two functions – provide access to the different areas and to divide the different sections containing males and females, whites and blacks. It appears that none of the roads were paved or otherwise improved and none were more than a single lane. Utilitarian roadways such as these seem to be the norm for institutional cemeteries.

In spite of the strong institutional or functional appearance, none of the cemeteries had their boundaries well (or at least permanently) marked. While several had hog wire fences while in use, these were quickly lost and never replaced. Cemetery 5, currently in use, has only a fence

façade. As a result boundaries for most of the cemeteries are not well defined today.

None of the cemeteries ever appear to have had any sort of building, structure, or other features. These would have taken up space and reduced the burial space available.

Site furnishings are severely limited. Most of the burials, prior to Cemetery 5, were marked with wooden headboards. Most of these have disappeared over the years. In Cemetery 5 the Hospital converted to concrete markers with stamped aluminum numbers. More recently, as these earlier monuments required replacement, the Hospital has begun using granite. Each cemetery that is still extant exhibits a small number of graves where family or friends have sought a more permanent and individualistic marking. These remain scattered in Cemeteries 3 and 4. In Cemetery 5 the Hospital, apparently to allow easier maintenance, has (with one exception) set these markers flush with ground.

The earliest of the burial grounds, Cemetery 1, has on several occasions exhibited clear and compelling bioanthropological evidence. It seems likely that all of the cemeteries will exhibit similarly intact archaeological features.

Historic Synopsis

This research is based largely on records available at the State Archives of Florida and the State Library of Florida. Additional information was provided from the files of the Department of Corrections, as well as the Department of Children and Families. An effort was made to evaluate records that might be held at the National Archives, but it was not possible to visit that institution. This should be viewed as an initial research effort since it was limited and did not fully explore all of the possible resources.

Context for Gadsden County

Publications such as Womack's *Gadsden: A Florida County in Word and Picture* (Womack 1976) and Cox's *The Early History of Gadsden County* (Cox 2008) provide ample background for those interested in the development of Gadsden and should be consulted for specific research interests.

Pre-Columbian Gadsden

The history of the area, of course, begins with the Native Americans and Milanich (1994) provides a good overview. Research has found that Paleoindians, the first humans in Florida (at least 10,000 to 12,000 years ago), clustered around water holes that helped concentrate game. The Chattahoochee area is in a marginal zone that "could have provided perched water sources in flat-bottomed penneplain lakes and prairies" (Milanich

1994:41). By the Late Archaic beginning about 3,000 B.C. regionalization had occurred and in northwest Florida researchers have found small occupations away from the coast in interior forests, as well as larger sites in wetland areas (Milanich 1994:95). Fiber tempered pottery was introduced shortly after 1,700 B.C. and many of these Late Archaic groups were sedentary with wetland resources and the nearby forests providing the resources necessary for this lifestyle.

Regionalization continued with the following Deptford and Swift Creek cultures. By about A.D. 750 the region was dominated by the Wakulla that developed out of Weeden Island and included the adoption of maize agriculture (Milanich 1994:194). In northwest Florida the Mississippian Period is recognized by the presence of the Fort Walton culture that developed out of the late Weeden Island Wakulla

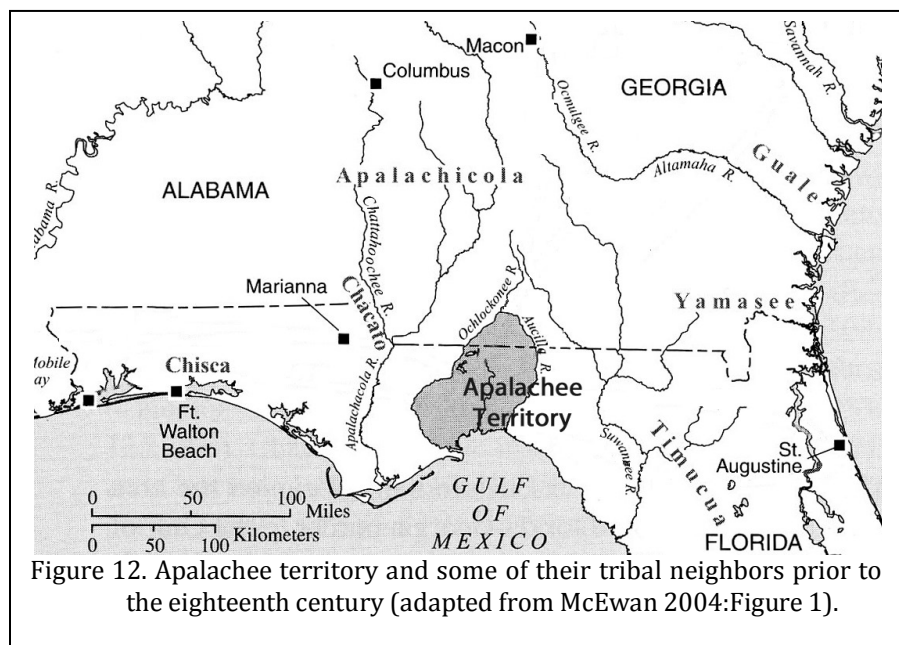

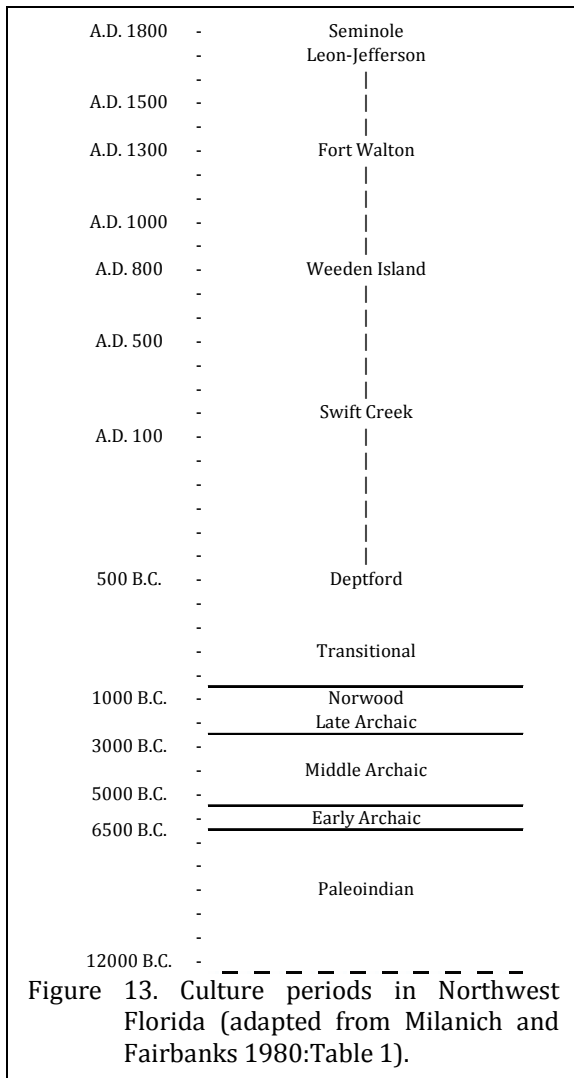

Figure 12. Apalachee territory and some of their tribal neighbors prior to the eighteenth century (adapted from McEwan 2004:Figure 1).

culture. These people practiced mound building, intensive agriculture, and hierarchical settlements (Milanich 1994:355). Milanich notes that there are a variety of regional variations found in the Apalachicola River valley, the Tallahassee Hills, the Marianna Lowlands, and the Gulf coastal region (Milanich 1994:358). Weeden Island, however, begins about A.D. 1,000 and extends to the colonial period.

Early Spanish Activities

Cox (2008:17-24) provides a brief defense of Swanton's de Soto route through Gadsden County and refutation of Hudson's route north from Tallahassee through Georgia.

Regardless, de Soto's 1540 venture did not have any lasting effect on the area's native groups and it wasn't until the 1630s that the Spanish settled the province of the Apalachee between the Aucilla and Ochlockonee rivers (Figure 12).

In 1639 the Spanish were able to make peace between the Apalachee and their neighbors to the east, the Chacato. The Spanish became increasingly aware of the "Apalachicola" (Lower Creeks) to the north and the groups further west. The Chacato were quickly included in the Spanish trade network and by 1674 two mission villages were established in the vicinity of Marianna. Good relations, however, were short lived and the Chacato revolted in 1675 as a result of pressure to become Christian (Cox 2008:31-33; Lankford 2004:664). Peace was created, but was shortlived and by 1677 the Chacato were again at war with the Spanish (Cox 2008:33-34). Eventually the Chacato fled northward.

Meanwhile the Spanish were successful in having at least some Apalachicola move southward to the forks of the Apalachicola, Chattahoochee, and Flint rivers, where the settlement of Santa Cruz de Sabacola was established (Cox 2008:30-33).

Nevertheless, relations between the Spanish and Apalachicola deteriorated as the English influence spread into the area. The Spanish ultimately led a series of raids against the Apalachicola. By 1693 virtually all of the Apalachicola, including those at Sabacola, relocated northward to the Ocmulgee River area. The following year the Apalachicola and their allies struck southward, destroying the Spanish mission at San Carlos. Cox comments that this "ended forever Spanish efforts to settle at the forks of the Apalachicola, Chattahoochee and Flint Rivers" (Cox 2008:35).

The Eighteenth Century

During the first few years of the eighteenth century the English persuaded the Apalachicola (now called Creeks) to attack Spanish missions. By 1704 the Spanish had been pushed back to St. Augustine in the east and

Pensacola in the west. Meanwhile many Apalachees and Chacatos fled westward, taking up residence with the French in the Mobile Bay area (Lankford 2004:664). By 1715, however, the Apalachicola no longer trusted the English and joined with the Yamassee in the Yamassee War (1715-1717). As the Cherokee turned the tide in favor of the English many of the Creek abandoned the English settlements and again shifted south, back to the traditional Apalachicola lands on the Chattahoochee River in the vicinity of Gadsden County. Contact was again opened with the Spanish and the Creeks remained in the area (at Fort Apalachicola in the Lake Seminole area) until about 1740 (Cox 2008:46).

The French and Indian War (1754-1763), known elsewhere as the Seven Years' War, pitted Great Britain against France. In North America many Native American groups allied with the French. Initial French successes were reversed by 1760. In North America the war ended with the Treaty of Paris in February 1763. As a result, France ceded French Louisiana west of the Mississippi River to its ally Spain in compensation for Spain's loss to Britain of Florida. The loss of Florida, however, was short-lived and Spain reacquired the property in 1783 as a result of its alliance with the fledgling United States during the American Revolution (Cox 2008:49).

The boundary between the United States and Spanish Florida was set by the 1796 Treaty of San Lorenzo. The boundary would begin on the Mississippi River at the 31st degree north latitude and continue due east to the middle of the Chattahoochee River. From there it would follow the middle of the river to the junction with the Flint River and from there straight to the headwaters of the St. Marys River. From that point it would follow the middle of the river to the Atlantic Ocean. Unfortunately, as good as this sounded on paper, it resulted in considerable uncertainty on-the-ground (Cox 2008:49-50). Cox details the effort to establish this boundary, including the creation of what is known as Ellicott's Observatory at Chattahoochee in 1799 (Cox 2008:57).

The Nineteenth Century

The War of 1812 (1812-1815) between the United States and Great Britain was largely fought in the northeast. In the South, the war largely involved U.S. forces and Native Americans. Most historians view the resulting Creek War as part of the War of 1812 since the Creeks were supported by the British. Regardless, the stage was set by the development of a nativist movement among the Creek in late 1812. What began as essentially a civil war among the Creek spread to whites during the summer of 1813. By the Spring of 1814 Andrew Jackson led a force of U.S. regulars, Tennessee militia, Choctaw, and Cherokee against the Creek at Horseshoe Bend, Alabama. The Creek were decisively defeated with at least 800 Native Americans killed. Never before or since have so many Indians lost their lives in a single battle. Jackson pursued the surviving Creek until they surrendered.

Meanwhile the British established a small fort on a low bluff of the Apalachicola River about 30 miles north of the bay (Prospect Bluff). As Creeks were defeated at Pensacola, the outpost became a refuge for both Native Americans and African Americans fleeing slavery (Cox 2008:61). By November 1814 the British advanced northward to the Gadsden County area, establishing what is known as Nicolls' Outpost on the east side of the Apalachicola just below the confluence of the Chattahoochee and Flint rivers. While the fort has never been found, Cox suggests that it was in the immediate area of Chattahoochee, perhaps just north of the U.S. 90 bridge (Cox 2008:64). American plans to attack the fort were thwarted by the signing of the Treaty of Ghent, which ended the War of 1812. By May 1815, Nicolls' Outpost was abandoned (Cox 2008:69).

Both the U.S. and Spain anticipated that the fort downriver would also be abandoned, but soon learned that it had been taken over by African Americans wearing British uniforms. While the United States waited for Spain to deal with the "Negro Fort," the 4th U.S. Infantry established an outpost known as Fort Gaines on the Chattahoochee at the mouth of

Cemochechobee Creek (Cox 2008:77).

In anticipation of an assault on the “Negro Fort,” a second US post, Fort Scott, was established downriver from Fort Gaines at the confluence of the Chattahoochee and Flint rivers.

between Fort Scott and Chief Neamathla of Fowltown, a Mikasuki village about 15 miles east of the fort, boiled over. On November 22, 1817 the Mikasukis were driven from their village – beginning what is known as the First Seminole War.

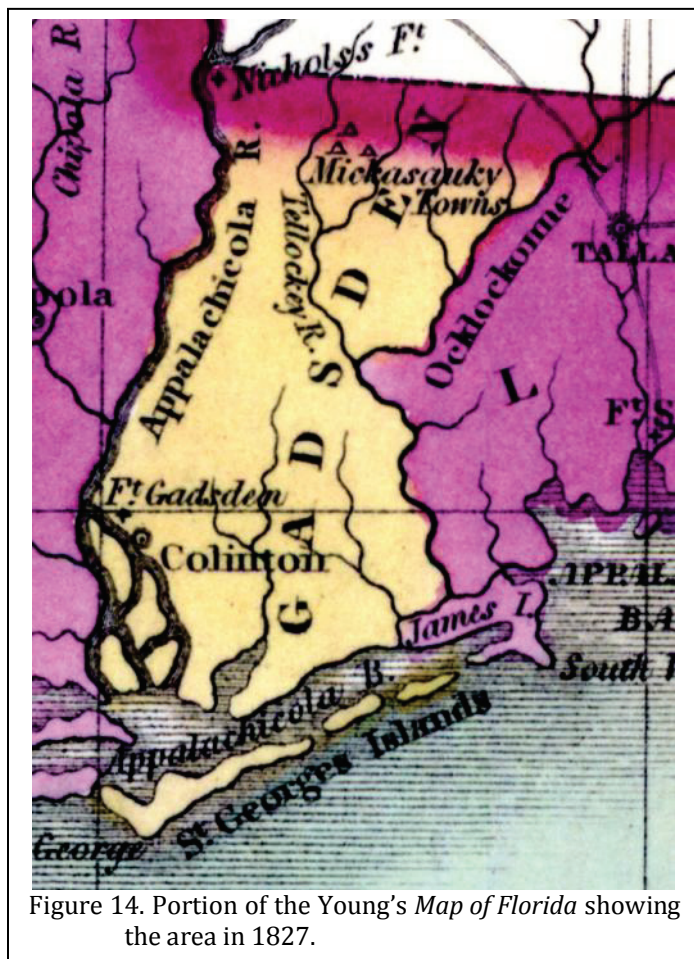

Figure 14. Portion of the Young's Map of Florida showing the area in 1827.

The assault on the “Negro Fort” at Prospect Bluff began on July 27, 1816 and ended abruptly as one of the first American cannon shots hit the fort’s powder magazine, destroying the fort and killing outright about 270 men, women, and children in the fort. Only eight occupants escaped without injury (Cox 2008:85).

The destruction of the Prospect Bluff fort did not, however, bring peace. White settlers intruding into Spanish Florida caused resentment among the Native Americans. Meanwhile tensions

A few weeks later a boat carrying supplies for Fort Scott, under the command of Lt. R. W. Scott, was attacked on the Apalachicola River by Seminoles. Most of the boat’s passengers were killed, resulting in the description of the event as a massacre (Cox 2008:93).

The United States retaliated by sending Andrew Jackson once again into Indian territory. He gathered around 3,000 troops and friendly Indians at Fort Scott and proceeded down the Apalachicola River to the site of the old “Negro Fort.” There they built a new fortification, called Fort Gadsden, before setting out to destroy a variety of Mikasuki villages around Lake Miccosukee, including the Indian town of Tallahassee. Eventually Jackson reached St. Marks in April of 1818. From there Jackson went east to the Suwannee River and then back westward to take Pensacola from the Spanish (Cox 2008:104).

Spain ceded east Florida to the United States and renounced its claim to western Florida (which had already been seized by the U.S.) as a result of the Adams-Onís Treaty of 1819. The treaty was ratified by Spain in 1820 and by the United States in 1821. Cox notes that even before this treaty American settlers had begun drifting into Florida and establishing farms and plantations.

In an effort to thwart further Indian uprisings a delegation of U.S. commissioners met the Indian groups at Moultrie Creek south of St. Augustine in September 1823. They succeeded in arranging a treaty whereby the Seminole gave up their lands in eastern Florida for a large reservation in Central Florida. Neamathla, at the time the most influential Indian in the region, and five other chiefs were allowed to keep their

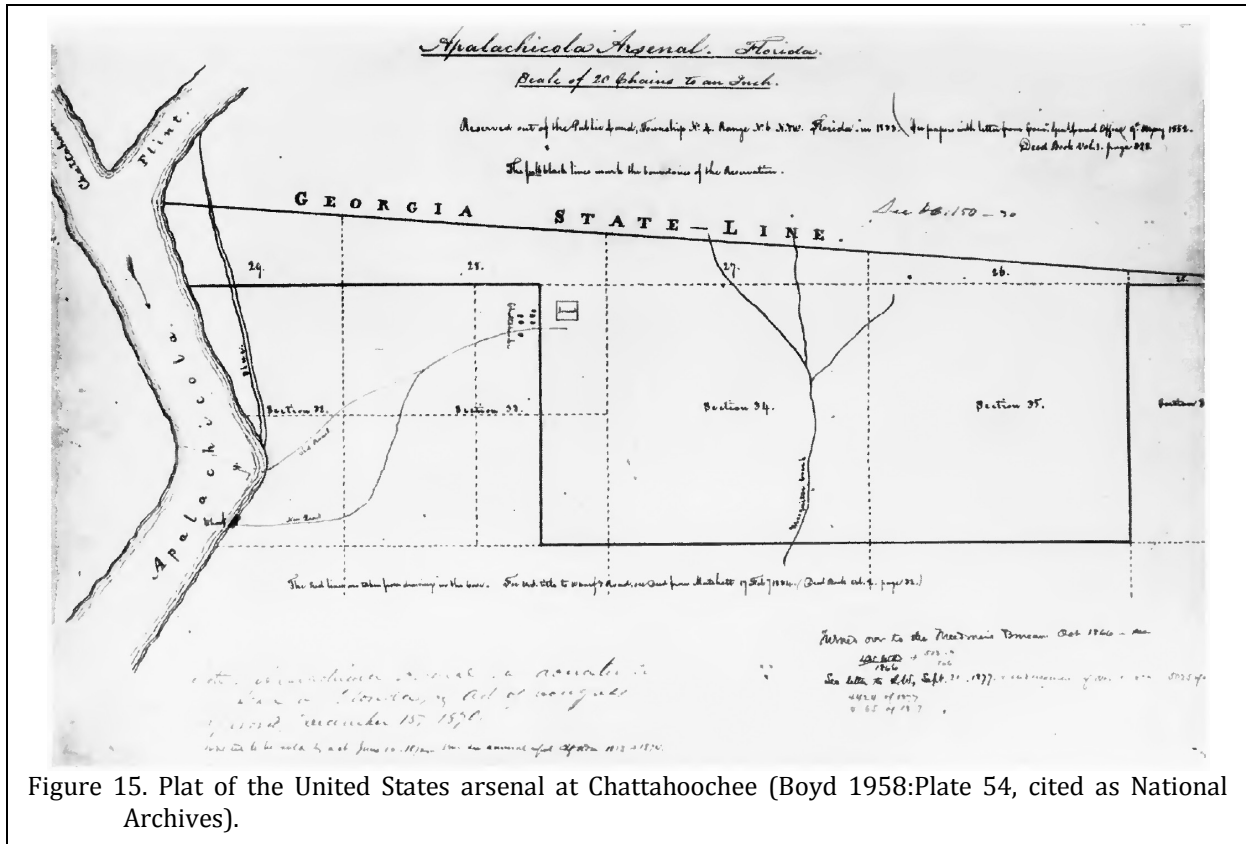

Figure 15. Plat of the United States arsenal at Chattahoochee (Boyd 1958:Plate 54, cited as National Archives).

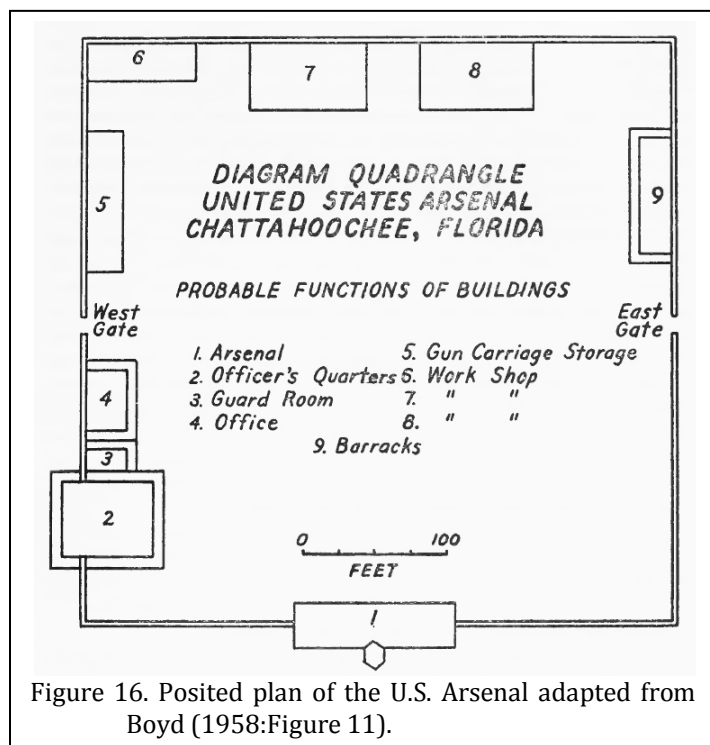

villages along the Apalachicola River (Cox 2008:111-112). Neamathla was to leave his Tallahassee lands and move to Gadsden County, but chose not to do so. Eventually he left Florida, moving to the Creek Nation in Alabama (Cox 2008:116).

The Seminoles slowly began moving to central Florida in late 1824 and early 1825. By 1826 most were on the reservation, but life was not going well for them. Drought destroyed their crops, game was hard to find and by 1828 many began wandering off the reservation. Fear of the Seminole joining with runaway slaves became more pronounced and by 1830 the solution as far as the U.S. government was concerned was for the Seminole to be moved westward to Oklahoma and the Indian Removal Act was passed.

The Second Seminole War began in December 1835 when Indians ambushed the command of Major Francis L. Dade, which was moving from Fort Brooke to reinforce Fort King.

During this war American forces were far less successful in destroying the Native American will and the war drug on until 1842 when those Seminoles not captured and sent west were given an informal reservation in southern Florida. Throughout this war, however, Gadsden County was relatively quiet since the military had established a series of small posts in order to keep the Indians out of northern Florida.

In fact, in 1827 Gadsden County was described as “an oasis which appears to have been formed by nature in one of her sportive and festive moods” (quoted in Rivers 1991:2). Gadsden was established as a county in 1823 by the Florida Territorial Council and the village of Quincy became the county seat. Rivers notes that by 1829 there were 30 residents with tracts of 500 acres or more. A decade later that number had increased to 50. Slavery was a significant characteristic of the newly formed county; in 1829 939 blacks were listed out of a taxable population of 1,219 (Rivers 1991:3).

The history of the arsenal has been briefly recounted by a variety of historians (Boyd 1958:276-287; Cox 2008:159-166; Stanley 1948:50-52; Turnage 1987:5-6; Womack 1976:26-27). Of these only Boyd has sought to make use of what may be voluminous information in the Military Branch of the National Archives. Unfortunately, he failed to provide citations for much of the research, making recovery of the documents difficult.

Visited in 1838 by Francis de Castelnau, a sketch of the arsenal was included in his 1842 *Vues et souvenirs de l'Amerique du Nord* (Figure 17). Castelnau described the arsenal as “a rather fine building built of lilac colored brick . . . surrounded by quite a high wall (quoted in Boyd 1958:277). The brick for the arsenal were fired locally – a twentieth century account claims that the brick came from “the ravine back of the ball park” (“A History of the Towns of River Junction and Chattahoochee,” *River Junction Tribune*, June 23, 1939). Another historian claims that the kilns were located in the swamp between the Jim Woodruff Dam and Victory Bridge (“ACI Brick Plant – A Little Bit of History,” *Twin City News*, September 26, 1985).

20

in coming as were bricks from the selected contractor. The first officer given responsibility for construction, Captain John Hills, died on February 25, 1835. His replacement, Lieutenant Charles Petigru, arrived on April 13, 1835. Petigru died on October 6, 1835. His replacement, Lieutenant John Williamson, arrived on November 28, 1835. The arsenal was finally completed late in 1839, at a cost of \$226,932.50 (Boyd 1958:283; this is approximately \$5,278,000 in 2009 dollars).

In spite of the human – and financial – cost, it doesn't appear that the arsenal was ever particularly active. By 1858 it was observed that

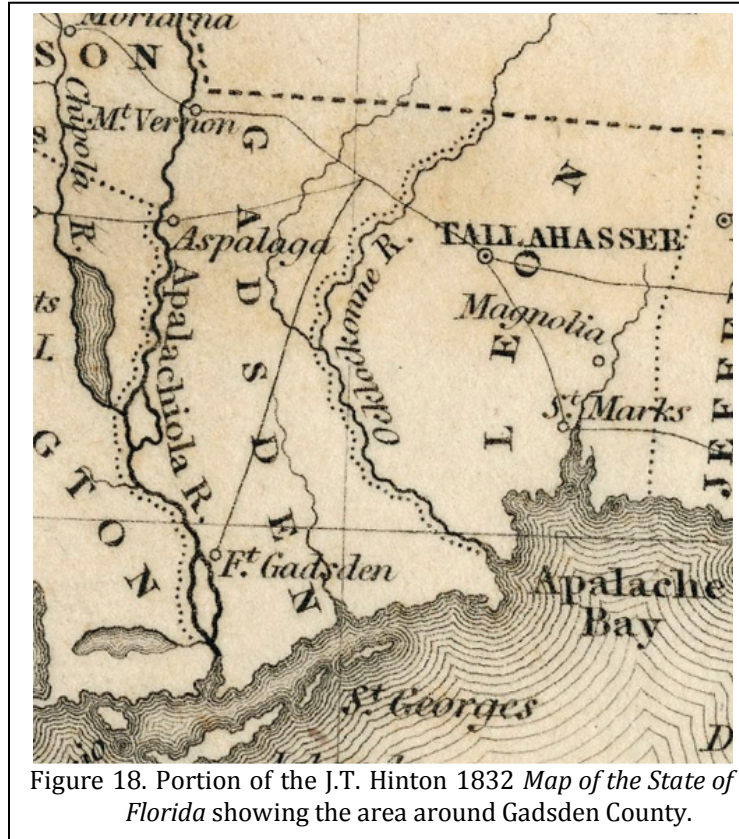

Figure 18. Portion of the J.T. Hinton 1832 *Map of the State of Florida* showing the area around Gadsden County.

the arsenal had “laid inoperative for many years at a general cost to the United States” (quoted in Boyd 1958:284).

In addition to Hills and Petigru, Boyd reports at least one additional death while the arsenal was under construction, that of a workman. We know that Hills and Petigru were buried a mile to the east-southeast on the east

side of South Mosquito Creek (Cemetery 3). We have found no information on why this remote, low area was chosen. While Turnage (1987:6) reports that the burial site was “along an old road that led east from Chattahoochee to a crossing point on that creek,” the burial site is nearly 1,000 feet south of the road.

Gadsden Before the Civil War

Initially sugar was Gadsden's cash crop. In 1826 the Tallahassee *Intelligencer* observed that “a number of [sugar] mills we are told are erecting in Gadsden County” (quoted in Cox 2008:128). Sugar, however, faded quickly and by 1831 the Tallahassee *Floridian* reported that Sea Island cotton was replacing sugar, observing that cotton was equally profitable and could be grown with less effort (Cox 2008:129).

Something of the agricultural history of the county can be seen in the growth of slavery (Figure 19). In 1830, about 58% of the county's 461 families were slave owners. By 1860 the proportion had actually fallen to 46%, while the total number of enslaved African Americans increased from 2,501 to 5,409. In 1860, slaves accounted for nearly 58% of the county's total population. Rivers observes that while yeoman farmers and others who owned few slaves controlled local politics, it was the large planters who dominated the area's economic and social life (Rivers 1991:7-8).

Rivers were inadequate for the movement of crops since long stretches were not navigable. Apalachicola was about 100 miles away, placing it out of easy reach for most planters. Thus Rivers notes that most Gadsden County farmers carried their crops by wagon to Tallahassee and then shipped the crops on the Tallahassee-St. Marks Railroad to the St. Marks terminal (Rivers 1991:3; see Figure 18).

Tobacco was introduced into the Gadsden

County area from both Cuba and Virginia in the late 1820s. Pando reports that the early tobacco quickly lost its flavor, but the leaves also became thin, making them desirable for wrapper leaf (Pando 2003:17). Tobacco production boomed with an inevitable bust after the bumper crop of 1845 and it took several years for the crop to stabilize.

Rivers argues that throughout its history tobacco prices exceeded cotton, making tobacco the preferred cash crop in Gadsden County prior to the Civil War (Rivers 1991:10). Gray explains that,

Florida planters succeeded in producing tobacco for cigar wrappers which sold for 20 to 25 cents a pound in the New York market. About 1845 depression in the cotton industry resulted in a considerable expansion in the Florida tobacco industry, further stimulated by process of 40 to 80 cents per pound. The industry became overexpanded, and the price fell to 12½ cents (Gray 1958:2:756).

Even at a low of 12½¢, tobacco was more profitable than cotton.

The Civil War

Rivers observes that while many Gadsden residents did not own slaves, slavery was deeply rooted in the culture. As a result, virtually everyone had “immediate and personal reasons to fight to defend the institution that had bequeathed to them such gentle lives” (Rivers 1991:19).

The U.S. Arsenal at Chattahoochee was again thrust into the forefront of attention as tensions rose in 1860-1861. Florida Senators

David L. Yulee and Stephen R. Mallory wrote the Acting Secretary of War, Joseph Holt, requesting information on the ordnance and stores at Chattahoochee. Although Holt acquired the information, he refrained from sending the information on to Senators Yulee and Mallory, instead noting to them that the “interests of the service forbid that the information you ask should be made public” (Boyd 1958:284). In actuality the arsenal contained relatively little, only a single 6 pounder and 57 flint lock muskets and a small quantity of powder, shot, and cartridges.

Nevertheless, Florida Governor Madison S. Perry issued secret orders to the commander of the Quincy Guards, a local militia force, to seize the arsenal. Thus, early on January 6, 1861 a force approached the arsenal and demanded that it be surrendered. The federal force included an Ordnance Sergeant and three men (Boyd 1958:285). Four days later, on January 10, 1861, Florida seceded from the Union.

There seems to be little indication that the arsenal was ever used to any degree by the Confederacy. Boyd notes that Governor John Milton repeatedly recommended to the legislature that the facility be used, indicating that the forges were idle and that “at one time permission had been granted for its temporary occupation by Confederate forces on application of the Commanding Officer of the military district,” but the legislature never approved any substantive use (Boyd 1958:286).

Cox (2008:207-212) briefly recounts the history of the *C.S.S. Chattahoochee*, a twin-screw steam gunboat built at the Confederate navy yard at Saffold, Georgia in February 1863. Plagued by machinery problems, within three months the boiler exploded, killing 18 (Naval OR, vol. 2, pg. 531). The dead were taken to Chattahoochee and buried; a monument that is reported to mark the burial site is found just south of U.S. 90.

The ship was moved to Columbus, Georgia for repairs, new engines and boiler. By this time, however, the Confederates had sunk obstacles in the Apalachicola River, making it

only 157,000 pounds of tobacco – less than a third from a decade earlier. Nevertheless, 75% of this tobacco in 1870 came from Gadsden County (Pando 2003:18).

By 1890 tobacco was firmly rooted in Florida and Gadsden County. Statewide production reached 1,500,000 pounds with Gadsden growing nearly a quarter of that. Owl Cigar Company had extensive operations in the county, growing Havana and Sumatran leaf on nine plantations totaling 17,000 acres. The company owned 146 large tobacco barns and 210 “tenements” for their laborers (Pando 2003:20).

Table 2.
Agricultural Production in Gadsden County, 1870-1890

	Acres of Land		Cash Value								Value of Livestock	Corn, bu	Tobacco, lbs	Cotton, bales
	Improved	Unimproved	Farms	Implements	Horses	Mules	Milk Cows	Other Cattle	Sheep	Swine				
1870	66,237	135,218	601,484	45,097	691	603	2,319	559	4,572	1,605	7,360	-	118,790	3,258
1880	66,887	158,960	545,658	92,963	960	528	1,873	5,453	973	11,869	172,429	26,286	6,677	4,696
1890	54,531	100,075	600,060	42,930	1,180	253	2,597	5,673	1,036	13,373	398,220	215,467	355,461	3,304

impossible for the *C.S.S. Chattahoochee* to make it to the ocean. In 1864 she was moved up river and eventually scuttled as Union troops approached Columbus, Georgia (Naval OR, vol. 1, pg. 251).

On September 28, 1864 Florida Governor John Milton wrote the Confederate States Secretary of War J.A. Seddon that Marianna had fallen to Union forces. Two unarmed militia companies were captured, prompting the Governor to observe that “if we had arms and ammunition we might have resisted.” After pleading for assistance he warned, “unless promptly assisted, West Florida, with abundant supplies of corn, bacon, &c., will be irrecoverably lost” (OR, vol. 111, pg. 375).

Postbellum Recovery

Pando, like other Reconstruction historians, note that the Civil War – or rather the loss of slave property – “devastated the region’s tobacco economy” (Pando 2003:18). Operating capital no longer existed and credit from factors and export agents dried up. Northern customers had been forced to find alternatives to Florida tobacco, looking to imports from Cuba and other West Indies islands. In 1870, Florida produced

Table 2 shows the fluctuations in Gadsden’s agricultural production after the Civil War. In general, production gradually increased throughout the recovery. For example, the value of livestock soared from only \$7,360 in 1870 to nearly \$400,000 in 1890. Corn production, absent in 1870, increased to 215,467 bushels by 1890. Tobacco increased from just under 119,000 pounds in 1870 to 355,461 pounds in 1890. Nevertheless, cotton was generally stagnant, increasing only 46 bales between 1870 and 1890, and the value of the farms was likewise little changed during the late nineteenth century.

By 1890 over half of Gadsden’s 1,257 farms were owner occupied. While only 3.9% of the farms in Gadsden were 500 acres or larger, owners held 6.2% of these large tracts. Most of the farms – about a third – were 20-50 acres in size. Fully half of the owner-occupied farms, however, were between 100 and 500 acres.

Meanwhile the town of Chattahoochee was slowly growing up around the Florida State Hospital. By the mid-1870s there were only three residences outside the limits of the hospital. There

were “no churches or schools for the whites,” although African Americans had two churches in the small community. By 1871 the J.M. & P. (later the Seaboard) railroad was completed to Apalachicola and by 1882 the Florida & Western (later the Atlantic Coast Line) was completed. The Pensacola & Atlanta Railroad spanned the river with a bridge, creating the River Junction terminal (“Early Day Frontier Events Background Chattahoochee’s Growth in More Recent Years,” *Gadsden County Times*, February 7, 1946).

Victory Bridge opened across the Apalachicola River on June 20, 1922 (“Early Day Frontier Events Background Chattahoochee’s Growth in More Recent Years,” *Gadsden County Times*, February 7, 1946) and was replaced in 1956 (“Chattahoochee Has a Memory Like an Elephant,” *Tallahassee Democrat*, January 30, 1956). The Spanish Trail, also known as State Road 1 (today U.S. 90) was not paved until 1923 (“A History of the Towns of River Junction and Chattahoochee,” *River Junction Tribune*, June 23, 1939).

Much of Gadsden’s postbellum recovery consists of the history of Florida’s penitentiary and the Florida State Hospital, both of which are discussed below.

Chattahoochee Prison

Creation

After the Civil War the U.S. Arsenal at Chattahoochee was again federal property. It was rather quickly transferred from the Ordnance Bureau to the Freedmen’s Bureau in 1866 (Boyd 1958:286). We have not identified documents describing the condition of the arsenal, but it seems likely that it was in a state of decay. Holt reports that the property was ransacked by local residents who took anything of value (Holt 2005:32). One inspector commented that the buildings were “little better than ruins” (quoted in Holt 2005:33).

Meanwhile the 1866 elections in Florida firmly established a Republican government that quickly began spending money to rebuild the

state. New schools were constructed for blacks and whites; railroads were repaired and extended. Newspapers began to complain that the state’s jails were unsatisfactory. “Evil doers” were given free rein and the existing jails were laughable (Holt 2005:29, Roberts 1981:32).

Florida citizens, however, objected to paying taxes for any purpose, most especially for prisons that would certainly be filled with blacks (Holt 2005:30). In 1866 a representative of the Freedman’s Bureau in Florida, Colonel Thomas W. Osborn, expressed a willingness to turn the Chattahoochee arsenal over to the state for use as prison, if the legislature was to “abolish the ‘cruel punishment’ of pillory and whipping inflicted on so many freedmen” (Holt 2005:30). Governor David S. Walker sought, unsuccessfully, to convince the Florida legislature to end whipping. When General John G. Foster, the Assistant Commissioner of the Freedman’s Bureau, was told of the legislators’ inaction he declared, “this terminates my desire to give them the arsenal” (quoted in Holt 2005:30).

Meanwhile Florida’s debt continued to escalate, largely as a result of railroad guarantee bonds. The interest alone kept the state’s treasury empty. By September 1868 the prison issue again surfaced. Then Governor Harrison Reed traveled to Washington and this time was successful in giving the State control of the property at no cost (Anonymous 1869, Holt 2005:31). The Governor envisioned a self-supporting prison system with the inmates using the 400 acres surrounding the prison to grow their own food (Roberts 1981:33).

The prison was to be under the direction of the Adjutant General and oversight of the Board of Commissioners of Public Institutions. The prison’s chief administrator, selected by the Governor, was Malachi Martin, a moderate Republican and ex-Union army officer (Fryman 1978). As Roberts (1981:34) notes, Martin became a lightning rod for contentious political struggles. He was accused of abusing prisoners and stealing money from the State. He was vilified by J.C. Powell’s *The American Siberia, or Fourteen Years’ Experience in a Southern Convict Camp*. A review by Fryman, however, characterizes

American Siberia as consisting of “legends and half truths” (Fryman 1978:338).

By June 1869 Martin, given the rank of Colonel, had charge of 14 guards, mostly African American Union veterans, and 42 convicts, also mostly African Americans. They were being housed in the arsenal in open rooms since the legislature refused to allocate funds for the construction of cells (Roberts 1981:34). The bill in Congress approving the transfer of the property was approved on December 15, 1870 and the Act to approve the prison was passed by the Florida legislature on January 26, 1871 (Anonymous 1871:17, Boyd 1958:287).

Operation

The prison guards operated under military discipline, wore uniforms, had U.S. Army equipment, and were assigned military rank. A prison surgeon was assigned the rank of Captain and provided medical care. Martin reported that,

When the buildings came into possession of the State they were dilapidated, the widows and shutters gone, doors pulled off hinges and carried to different places in the neighborhood, and the lead [sic] pulled off nearly all roofs, and the buildings little better than ruins (quoted in Boyd 1958:287).

He set about repairing buildings, placing new sills under all of the porches, repairing the barracks, reglazing the windows, trimming the trees, and cleaning up the grounds (Boyd 1958:287). About 400 acres of pasture were fenced, and vegetables and corn were planted (Fryman 1978:324). Mosquito Creek was dammed, a sawmill and gristmill were constructed, and a brick-making plant was established (Boyd 1958:287, Holt 2005:36).

The efforts were less than perfect. No cells were provided, so prisoners were chained together at night. It proved difficult to find guards willing to submit to military discipline (civil

control was established in 1871) and there was never adequate funding. In fact, by 1869 Florida began exploring the possibility of leasing prisoners to private enterprise, thereby transferring the financial burden to private companies (Holt 2005:37).

Martin and his prison came under scrutiny at least six times. In July 1869 the Governor and local sheriff conducted an inspection resulting in his exoneration on charges of cruelty. A second inspection occurred in March 1871 and again the results exonerated Martin of any wrong-doing. Further inspections occurred in January 1872 and again in early 1874. In March 1874, a special investigator visited the prison to examine the condition of federal prisoners. There were 81 inmates, most working under guard at the prison farm. Living conditions were “filthy” and vermin-ridden, but there seems to have been no fallout that affected Martin (Fryman 1978:331). An inspection in early 1877 recommended renewed attention to the hiring out of convicts, “upon the most advantageous terms that can be obtained” (Fryman 1978:334). Unfortunately, the results of these various inspections are only imperfectly known since none of them resulted in a surviving publication – they are known only through newspaper accounts and brief mentions in legislative documents.

Efforts to make the prison self-sufficient were never realized. As Roberts notes, every advance was off-set by an increase in the number of prisoners (Roberts 1981:36). Another problem is illustrated by Holt, who notes that while the cultivation of the 400 acres provided most of the prison food, rising costs of food, clothing, and guards, “always exceeded profits realized from the prisoner’s production of tobacco and cotton” (Holt 2005:47).

Early convict leasing programs were equally unsuccessful. Holt reports that an agreement was made to lease Southern Railroad 42 prisoners. However, the cost to the State for guards and transportation resulted in a financial loss to the State. In addition, the State never collected the money due it for the prisoners’ work under the contract (Holt 2005:48).

Table 3.
Prison Deaths, 1869-1876 (Anonymous 1879:21)

Year	Deaths	Notes
1869	2	
1870	5	
1871	10	
1872	2	
1873	1	Sam Yates
1874	2	Frank Johnson, William Williams
1875	1	
1876	3	
Total	26	

Deaths

It is likely that yearly deaths were reported by the Surgeon, although relatively few of these reports still survive. The first we have identified is the 1873 death of Sam Yates of "general dropsy," a term for heart problems or renal failure (Anonymous 1873:32). A presumably complete tally is provided in Table 3. The 26 deaths seem almost miraculous given the poor conditions at the prison. Unfortunately, only three of those who died can be identified by name.

Although we can identify the number that died at Chattahoochee, the available records are entirely silent regarding where these individuals were buried.

Closing the Prison

Roberts notes that with the fall of the Republican administration and "redemption" of the State by Democrats, the prison system was almost immediately dismantled (Roberts 1981:37). In March 1877 a new convict leasing law was passed by the legislature, authorizing the assignment of all the state's prisoners to private contractors. The office of warden was also abolished (Holt 2005:50). All of the prisoners, regardless of age, sex, or condition, were leased to private contractors.

Seeking additional ways of cutting costs, the Democrats hit on the idea of creating an insane asylum. Florida did not have an asylum and the Board of Commissioners housed mentally ill patients in asylums elsewhere in the South for a

yearly cost of \$25,000. The Democrats hoped that creating their own asylum would dramatically reduce this cost. In 1879 the Florida Legislature authorized the conversion of the prison into a hospital for the insane.

The Asylum for Indigent Lunatics

Creation

An act that appropriated funds for the repair of the buildings in Chattahoochee to be used as an asylum for indigent insane was approved on March 2, 1877. A second act establishing the superintendence and management was approved that same day (Anonymous 1879:8-9).

Dr. W.B. Foreman was hired and placed in charge of the new institution. Based on the report of the Adjutant General, J.J. Dickison, conditions were abysmal,

On taking charge of the buildings for the Asylum March 6, 1877, I found much to do before they could be made comfortable for the lunatics. Having been used as a State Prison for 8 or 9 years, they were in a dilapidated condition. Mr. A.J. Fish was employed to repair them. He completed a large portion of the work early in July, having in good order for comfortable occupation one building for white females, one for colored females, and one for the white males – the latter building having been entirely abandoned, with not even a floor, sash, or blinds.

The large building known as the barracks was put in order for the colored males, rooms being made for them on the second floor. I purchased furniture and such supplies as was needed at that

time (Anonymous 1879:9).

In addition the grounds were enclosed, a small brick building was converted to house the most violent females, and the grounds were laid out in walks. Fences were also erected to segregate males and females, as well as whites and blacks; additional fencing was erected to prevent patients from having access to the staff accommodations. Almost immediately both the “white male department” and the “colored females” ran out of available space.

Dr. Foreman’s report, covering the period from March 2, 1877 through December 31, 1877 reported 12 deaths at the asylum – although no mention was made of burial (Anonymous 1879:14).

Nineteenth Century

There, unfortunately, has been no comprehensive history prepared for the Chattahoochee asylum and such a task is beyond the purpose of this study. Nevertheless, the surviving reports of the Superintendent and Adjutant General do provide a broad overview of activities.

Funds were always a problem, as was space at the facility. The report for 1885-1886 noted that while a hospital was badly needed (it seems difficult to imagine a mental institution being operated without one), one had not been built because of a lack of funds (Anonymous 1886:37). The institution was not even provided with adequate water. By 1885 the institution already housed as many “inmates” as possible and the administration was pleading for additional construction, noting that,

an outlay of \$6,000 would be none too much and none more than absolutely necessary. It is a charity that appeals to all and needs no especial advocacy on my part to the people of Florida to urge that the Asylum be put in a better condition (Anonymous 1886:32).

Very early the hospital administration reported that the death rate was affected by their receipt of “patients of an extreme old age and in a low state of health physically, who, in my opinion, could be better treated in a hospital for the sick than for the insane” (Anonymous 1888:53). Surviving is the report that in 1890 a Mrs. Brown submitted a claim, demanding that the state pay the \$10 in burial expenses of her son, Francis Joseph Brown, who died at the asylum. The Board of Commissioners of State Institutions approved the claim and also established that \$10 would be maximum allowed (Governor’s Letter Books, Vol. 1, Minutes, May 14, 1890, pg. 652). The implication of this entry are not clear and we found no further mention of such claims.

In 1896 the Superintendent reported spending \$95.98 per patient, down from \$105.06 the previous year. By 1898 the amount had declined to \$76.33 and at the turn of the century the amount was only 33½¢ per person, per day – reflecting just over \$122 a year (Anonymous 1897a:30, 1899:35, 1905:13-14).

At least by 1897 the institution developed a manual of rules and regulations that included instructions on what to do when a patient died,

the Supervisors shall see that the remains are prepared for burial with the greatest pains, and in the most becoming manner possible; and the clothing of the deceased is promptly returned to their friends (Anonymous 1897b:27-28).

An October 1, 1898 letter from the hospital physician, Dr. Louis Blocker, to the Board of Commissioners of State Institutions, reported that the number of deaths had spiked in the third quarter. He explained,

This quarter is always the most trying to us, and we generally have a depletion of the old chronic broken down patients who we have managed to carry along through the year. The

debilitating and enfeebling influences of the long summer heat is more keenly felt by them, and the least additional ailment or an acute attack of their old troubles result seriously (Board Of Commissioners of State Institutions - Insane Asylum - Admin Correspondence RG 890, 1878, 1885-1899 Box 1 Folder 1).

Clearly the institution was concerned about those who died, but there is otherwise no detail regarding burial practices or, more importantly, where burials took place. It seems unlikely, however, that they were in the immediate confines of the hospital grounds. Two plans are available from this period - one from 1895 and another from 1899. Neither shows a burial ground and it seems likely that burials would have occurred outside the main campus, consisting of the walled arsenal enclosure (Figures 20 and 21). Figure 22 illustrates the 1895 plan with a modern aerial photograph overlaid. This reveals that what we are calling Cemetery 1, and thought to represent the earlier penitentiary cemetery, would have been situated well outside the asylum walls and south of the cow stalls and feed house. It was likely in an area of fields. Even at the turn of the century, this setting would have been isolated from the hospital.

The surviving records indicate that some deaths at the institution stirred considerable controversy. For example, in June 1895 the Superintendent, J.W. Tramwell, wrote the Board of Commissioners of State Institutions,

Robert Williams (colored) was admitted from Duval County Jan. 5, 1895 in a hopeless pitiful condition, and on January 11th, 6 days later, he died. That part of my question papers that seeks to obtain the name of a relative or friend of patients in order to notify them of emergencies, was ignored in filling out the several blanks in Williams' case, which rendered me unable to recall any

person interested or else I would have promptly notified his people of his condition and death. His people were at fault in this respect (Board of Commissioners State Institutions - Insane Asylum - Correspondence re patients, RG 890, 1886-1897 Box 1 Folder 6).

Problems were not limited to the institutions' African American population. In February 1896 Superintendent Tramwell was forced to refute angry acquisitions from the widow of a white patient, Adolph Stetcher,

at, or within a few minutes of 5-o'clock on that morning, Dec 5th, he died. I had promised to wire Mrs. Stetcher in case of an unfavorable change in her husband's condition. But the slightest change did not occur until some hours after the telegraph office had closed for the night, and the death having occurred at 5-o'clock in the morning, I could not notify the wife immediately, but did so soon as possible. My telegram having been sent to the telegraph office before nine o'clock A.M. If it was not delivered to the addressee promptly, I am not responsible for that. Mrs. Stetcher's first reply to my notice was not delivered to me until 9,11 A.M. on the 6th, or the day after date of my notice to her, and not hearing from her after ample time, my undertaker buried the body at, or just after 6 o'clock P.M. the 5th. Burying the dead after dark is practiced not only by the management here, but in many other similar institutions, because we wish to save our living patients the gloom of seeing corpses carried out before their eyes in daylight,

and I am sorry the lady thinks we had a dark 'inhuman' motive in not making an exception of the case in controversy. Before 9-o'clock of the morning the patient died, I sent to the telegraph office, a message notifying Mrs. Stetcher, whose reply I did not receive until 9 11 A.M. the next day. Thirteen hours after death the body was buried in a neat wood coffin (Board Of Commissioners of State Institutions - Insane Asylum - Correspondence re patients RG 890, 1886-1897 Box 1 Folder 6).

Twentieth Century

In the new century the Superintendent remarked that, "the privilege of holding post mortems on those very interesting cases of the unclaimed dead will prove of inestimable value in the study of the insane and in preventative treatment (Anonymous 1901:22). The hospital embarked on a period of significant expansion, but the process was not without controversy. Just as the State Penitentiary was frequently the subject of investigations concerning cruelty and malfeasance, so too was the new hospital.

In June 1905 a committee was appointed to inspect the hospital after numerous complaints were lodged concerning "practices and doings" at the institution. The results were shocking and newspapers reported that mistreatment was found and that, "death resulted from the cruelty practiced upon [the patients]." Conditions were so bad they could not appear in print, maintenance funds were wasted, and the conditions were unsanitary (*Weekly True Democrat*, Tallahassee, June 2, 1905). The *St. Augustine Record* demanded a thorough "housecleaning from cellar to garret" and charged, "immorality and vice on the part of attendants, and cruel and inhuman treatment of the inmates." The State was even accused of hiring illiterates who "butchered and botched" every document, misspelling words, including patient names. The disgrace of the institution "brought the blush of shame on every citizen."

By 1919 the name of the institution was changed from the Florida Hospital for the Insane to the Florida State Hospital. Over its history the hospital has owned and managed large amounts of land. In the mid-1950s the hospital owned over 10,300 acres, with only 2,571 acres in Gadsden County (Florida State Archives, RG 841, S-1092, Administrative Files, Box 2, Land Purchases). During its history the hospital has sold a variety of commodities, including scrap metal, timber, and even swill. In 1946-1947 alone the hospital netted \$70,500 from timber sales.

In the late twentieth century the hospital is perhaps best known for its involvement in the 1975 *O'Connor v. Donaldson* Supreme Court decision that gave momentum to the deinstitutionalization movement in the United States. Kenneth Donaldson, a patient at the hospital, sued the hospital and staff for confining him for fifteen years against his will. The decision essentially found that it is unconstitutional to commit for treatment a person who is not imminently a danger to himself or others and is capable to a minimal degree of self-living.

Sadly, there is no comprehensive history of the Florida State Hospital and these discussions will focus on aspects that have some bearing on the property's cemeteries.

The Sewing Room

The hospital began producing shrouds on-site in 1901, when 34 were sewn. In 1902 the number declined to 26 (Anonymous 1903). By 1914 the number of shrouds produced by the sewing room had increased to 182 (Anonymous 1915:70). In 1918 the hospital sewing room produced 470 shrouds for the 285 deaths that year (Anonymous 1919). None of the discussions indicate the purpose of these shrouds, but we presume they were being used on patients who were buried in the hospital cemetery.

In the nineteenth century a shroud, among Christian populations, was a backless garment with sleeves, usually with ruffling to decorate the front, that covered the body from neck to feet. Being backless, they were easily

placed on the corpse, giving it the appearance of being clothed while minimizing the labor involved. This, of course, is very different from Jewish shrouds, or tahrim (also tachrichim), that include a shirt, pants, head and face covering, and belt. In both religions, however, the shroud, lacking pockets (for the accumulation of wealth) and being of a relatively standard form, provided equality in death and avoided the embarrassment at not being able to afford lavish burial clothes. These have historically been made of linen (which, at least early on, reflected the religious belief that Christ was buried in linen), cotton (in the South probably a matter of socioeconomic status since it was so common and affordable) or occasionally wool.

For a hospital of indigents, a shroud would have simplified the burial process and provided some degree of dignity. The cost would have been negligible since it was produced on-site using patient labor.

In 1926 the Sewing Room was producing casket linings, ruffles, puffs, and pillows, as well as shrouds (Anonymous 1929:32). By 1928 the Industrial Shop also began producing "casket linings," making 33 in 1928 and 35 in 1929 (Anonymous 1931). These were likely metal linings intended to prevent leakage when bodies were shipped. Thus, they probably reflect a few caskets made and set aside for those bodies being shipped home.

Caskets

In 1920 the Superintendent appeared before the Board of Commissioners, urging them to stock caskets, noting that "the ones they were now able to secure for the price fixed for same were entirely too cheap looking" (Board of Commissioners of State Institutions, Minute Book F, RG S-431, January 20, 1920, pg. 75). The Board, not ready to commit, instructed the Superintendent to investigate what price he could obtain by handling them at the hospital, compared to the best price he could obtain by providing an exclusive contract.

A few identified receipts still present at

the hospital reveal that in 1915 caskets were being purchased from Scarborough & Company in Chattahoochee. One purchased on August 3, 1915 was invoiced at \$16 (Figure 23). Another invoiced on June 18, 1915 cost the hospital \$25. An additional \$3 was charged for a "robe" – a modern adaptation of the shroud.

While \$16 in 1915 is the equivalent of \$350 in 2011\$, this reflects a retail price. The mark-up on caskets was extraordinarily high and the \$16 casket probably cost Scarborough & Co. little more than \$4 (Trinkley and Hacker 2004:14-15). Thus, describing them as "cheap" is probably reasonable.

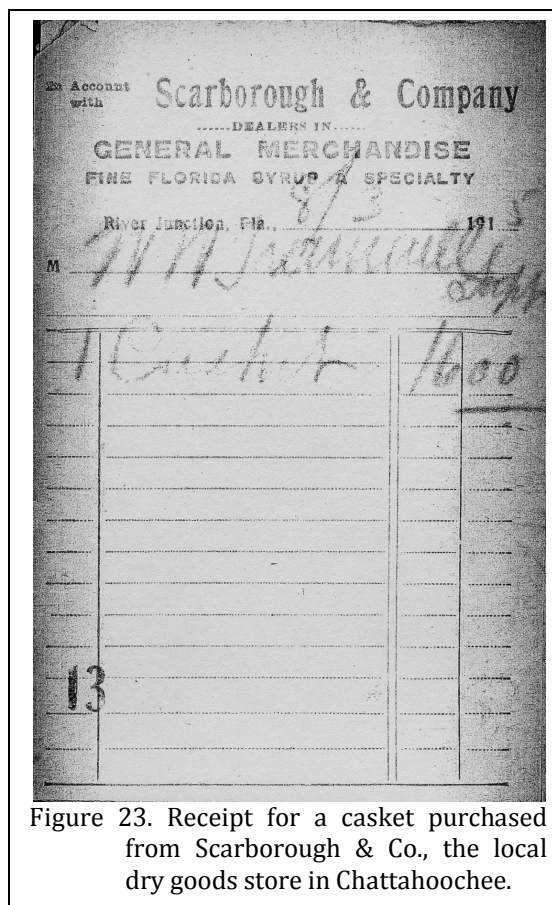

Figure 23. Receipt for a casket purchased from Scarborough & Co., the local dry goods store in Chattahoochee.

There seems to be no further discussion of this issue, although there are numerous bills from the Florida Casket Company in Jacksonville, Florida. Since the company provided sundries, such as embalming fluid, it isn't certain that all of

the invoices are for caskets, but at least some were.

In 1923 the Industrial Department began producing coffins with 22 manufactured that year and 253 produced in 1924 (Anonymous 1925:40). It wasn't, however, until February 1926 that the Board of Commissioners of State Institutions authorized the manufacture of caskets by the hospital – and the creation of a “Casket Factory”. The resolution provides interesting details concerning how the hospital was dealing with death,

Whereas, the Superintendent of the Florida State Hospital reports that embalming of all deceased inmates of the Hospital is now done by one of the employees of the institution at a moderate cost to relatives, guardians, etc., of inmates who die at the Hospital, thereby affecting quite a savings to said relatives and guardians, as well as being a great convenience to them and the Institution, and

Whereas, The Superintendent also reports that all burial caskets that may be needed at said Institution can be satisfactorily manufactured by the Industrial Plant at said Hospital, enabling said Institution to supply this need, furnishing employment that will be beneficial to those patients that may be ascertained to be suitable for this work, assisting the tax payers of the State in the cost of the maintenance of the Institution, and also that portion of the tax paying public procuring said caskets, therefore

Be it Resolved, That the Superintendent be directed to make suitable arrangements to manufacture at the Florida State

Hospital such burial caskets as may be needed for said Institution to be used for burial of such deceased inmates as may be buried at the Institution, and also a sufficient number and of such character to supply the needs of the relatives, guardians, etc., of patients who die at the Hospital and whose remains are desired to be buried elsewhere, at a moderate cost, thus enabling the Institution to furnish all that will be necessary in the preparation of the bodies of such deceased inmates as are to be transported for burial (Board of Commissioners of State Institutions, Minute Book H, RG S-431, February 2, 1926, pg. 347-348).

In the Board's discussions they explained that by approving this change they were furnishing beneficial work to the patients, provided a “convenience” to the hospital, and would save both the state and the relatives of patients money.

Part of the old magazine was converted into a casket factory (Anonymous 1927:28). Up to this time the magazine had been used for storing “refuse.” The structure had caught fire in 1920, completely gutting the interior and destroying the roof. In 1922 the decision was made to “restore” the structure by constructing a “cement roof.” With this done a portion of the structure had been used for storing “sweet potatoes, syrup, and like commodities.” Another portion was floored and used as a smoke house (Anonymous 1923:24).

By 1926 the old magazine had apparently grown too small for the casket operation and the Superintendent requested funds to erect a new building. Although no specific amount was authorized, the Board did approve the idea days later (Board of Commissioners of State Institutions, Minute Book I, RG S-431, August 17, 1926, August 30, 1926, pg. 29, 45). By 1927 \$20,000 was set aside to purchase the equipment the Superintendent determined was necessary in

order to begin manufacturing caskets for commercial sale to local establishments and the Board further instructed the Superintendent to build the new structure using concrete blocks (Board of Commissioners of State Institutions, Minute Book I, RG S-431, April 19, 1927, June 28, 1927, pg. 264, 327).

Between July 1926 and June 1928 the newly formed Casket Factory produced 436 caskets and 434 coffins, four metal lined shipping cases, 447 wood shipping cases, and 358 paper casket covers. The distinction between caskets and coffins, while common in the trade, is not entirely clear-cut. In general, coffins were hexagonal and did not have hinged lids, while caskets were rectangular (sometimes with rounded corners) and usually with a hinged lid and other fittings. Paper casket covers appear to be just what is implied and the covers were used to protect caskets in shipping. For the first two years of operation the Casket Department spent \$11,595.27 (Anonymous 1929:27-28).

In the next report, covering the following two-year period, the Casket Factory produced 325 adult caskets, 14 child caskets, 546 coffins, seven metal lined shipping cases, 351 wood shipping cases, 15 oil cloth casket covers, and 339 paper casket covers, suggesting that business was thriving (Anonymous 1931:21).

From 1930-1932 the Casket Factory also produced 290 "Cemetery lot markers." These were presumably headboards, but the report offers no details (Anonymous 1933:40).

Between 1932 and 1934 the Casket Factory was consolidated with the Construction Department and was being operated in conjunction with the Carpenter Shop (Anonymous 1935:44). This does not seem to have reduced overall production since 480 "pauper caskets painted and lined," 179 "cloth finished caskets," one metal lined shipping case, 189 wood shipping cases, 48 paper casket covers, and 13 oil cloth casket covers were produced. It is interesting that two qualities of caskets are mentioned, suggesting that the "pauper caskets" were likely used by the hospital for their own patients, while the cloth

covered caskets were sold locally (cloth covered caskets were a fairly traditional lower-end commodity often sold by rural undertaking firms). For the first time "coffins" were no longer being produced.

The same range of caskets were itemized in the following report (Anonymous 1937:65). This report, however, also provides greater financial details and we learn that while the Casket Factory was costing the State \$2,276.02 in operating costs (most of this salaries, \$1,499.31 and supplies, \$762.53), the produced caskets were sold for only \$667.62, leaving a net deficit of \$1,608.40 (Anonymous 1937:99).

While a great many caskets were being manufactured, the hospital continued to receive bills from casket companies such as the Florida Casket Company, Chattanooga Coffin & Casket Company, and Columbus Casket Company. They also were apparently purchasing the hardware to trim their own caskets from three primary companies: Victor Casket Hardware Company and Parsons Casket Hardware Company.

It isn't clear how successful the hospital was in the casket business. The Board minutes reveal that the caskets were to be sold to local merchants "around the Hospital at the same price they would have to pay at the factory, less freight rate" (Board of Commissioners of State Institutions, Minute Book I, RG S-431, October 28, 1927, pg. 424). So the overall savings to local merchants would have been relatively minor.

Indeed, by 1936 the Casket Factory was closed with the observation that the hospital was faced with "high cost of production in comparison with mass production prices" (Anonymous 1939:13). Perhaps what the report really meant is that the effort to sell caskets was being suspended, since the 1946-1948 report mentioned that the Construction Department shops "build and furnish caskets for deceased, indigent patients" (Anonymous 1949:49).

This practice continued in 1950 (Anonymous 1951:41) and in 1976 a newspaper article explained that the hospital was still making

its own coffins from “medium-grade pine in the hospital carpentry shop, lined with white muslin stapled to the inside walls and painted battleship gray” (“Florida State Hospital Cemetery: Efficient, Anonymous,” *St. Petersburg Times*, August 16, 1976). The indigent were still being buried without cost, although families can “voluntarily pay about \$170.”

At the time burials were conducted on Mondays, Wednesdays, and Fridays because those days worked best for the prison labor that excavated the graves. In 1976 the hospital also began using concrete vaults (“Chattahoochee Changes,” *News Herald*, February 8, 2004).

Undertaking, Embalming, and Praying

By at least 1919 the hospital had employed an embalmer, P.L. Laing, on-site. When his \$150 a month contract ran out on October 1, 1920, the Superintendent reported that Laing had requested a raise. The Superintendent apparently supported this, pointing out that the state had saved about \$650 by having its own embalmer – implying that perhaps prior to this, bodies had been embalmed locally.

The Board of Commissioners, always looking for a bargain, countered offering \$100 a month, plus that portion of the \$20 fee charged those who could afford it over the actual cost. In short order Laing accepted the \$150 a month salary, perhaps suggesting he realized relatively few relatives of indigent patients were able to pay \$20 for embalming and he was better with a standard salary (Board of Commissioners of State Institutions, Minute Book F, September 30, October 9, 1920, RG S-431, pg. 177, 189). Laing did obtain a raise, to \$175 a month, in mid-1925 (Board of Commissioners of State Institutions, Minute Book H, July 28, 1925, p. 185).

Throughout the 1920s the accounts periodically indicate the purchase of embalming fluid from companies such as The Embalmer’s Supply in Westport, Connecticut, Champion Chemical Company of Springfield, Durfee Company in Grand Rapids, Max Huncke Chemical

Company in St. Louis, and Frigid Fluid Company of Chicago.

By the 1940s attention had turned to the role of the Hospital’s Chaplain. In the 1942-1944 report, “the chaplain conducts funeral services for deceased patients and writes to members of the deceased patient’s families who are unable to come to the hospital for such services” (Anonymous 1945:37).

While attention shifted from the reality of preparing bodies for burial to the more ethereal task of offering prayers and ushering the deceased into eternity, the two were still closely related. In fact, by 1950 a new Mortuary/Chapel Building had been constructed (Anonymous 1953:37).

One of the earliest mentions of the hospital’s cemetery occurred in the 1956-1958 report,

At present interments in the hospital cemetery total about 30% of the deaths in the hospital. The hospital maintains its own cemetery with a present area of about 40 acres for the accommodation of both white and colored patients, and has perpetual care with permanent markers for each grave (Anonymous 1959:32-33)

Another brief mention of hospital’s burial ground is found in the 1960-1962 report,

our cemetery, located about one mile from the hospital, is well maintained and permanent markers are provided at each grave. Also, a record of the location of each grave is kept by the hospital (Anonymous 1963:38).

This same report explains that the hospital’s Funeral Department, as it was then called, “serves this large institution in much the same way as other funeral homes serve their communities,

preparing the remains of those who pass away here for removal [i.e., shipment home], or for burial in our Hospital Cemetery, if relatives do not desire removal for burial elsewhere" (Anonymous 1963:37-38).

At least as late as 1966 the hospital retained a licensed funeral director, L.J. Herring.

The Human Dimension

It is easy in a historical study to ignore the human tragedy of death. This tragedy becomes even more palpable when it involves the poor. For the hospital, however, it seems clear that it was little more than the arrangement of logistical and financial details.

In a December 1, 1916 letter from the Superintendent concerning the condition of Mr. Wyatt Aldridge to his wife, the Superintendent advised,

you may be expecting to hear the worst at any time. Should you desire to have his body moved in the event of death you should make the necessary financial arrangement with this office beforehand so as to avoid delay. The casket for shipment will cost \$16.50, and the transportation charge will be double one railway ticket. An embalmers' fee of \$28.80 will also be necessary. This amount must be guaranteed this office some bank or the express company (Florida State Archives, RG S-1063, Carton 14, Folder 13).

On January 17, 1917 Aldridge's daughter, Ella Parker, wrote back explaining that should her father "pass out" to,

Wire or Phone me at once. So I can use my ideas concerning his body. If I can Raise the Means. I may desire other arrangement (Florida State Archives, RG

S-1063, Carton 14, Folder 13).

For many we found letters from some member of the community able to write for a friend or neighbor,

I am writing you asking of an insane that was taken there from Sanford, Fla during the month Sept or the 1st of Oct his name is Joe Brown and his wife wants to know if he is in the asylum or is he living or dead, please notify me at once in regards of this man (Florida State Archives, RG S-1063, Carton 14, Folder 4).

In response the Superintendent wrote that Joe Brown died on October 22, 1916 and that "the body was interred in the hospital cemetery where his grave has been marked and numbered for future identification (Florida State Archives, RG S-1063, Carton 14, Folder 4).

In some cases family members wrote long, pleading letters asking for information. Emma Johnson wrote the hospital a four page letter in September 1917 asking about her husband, J.B. Johnson. She explained that she "wrote here to him and wrote, but however fail to hear from him" (Florida State Archives, RG S-1063, Carton 14, Folder 56). The response was short,

I have your letter of recent date, making inquiry as to the condition of your husband, B.J. Johnson, and replying you are advised that he died here on June 30, 1917, the cause of his death being cerebro spinal syphilis (Florida State Archives, RG S-1063, Carton 14, Folder 56).

No mention was made of the individual's burial.

In some cases it was the hospital writing a local sheriff or some other official to notify them of a death of a patient from their area and explaining that having no other instructions the

individual was buried "in the hospital cemetery and mark[ed] the grave plainly, so that it can be identified at any time" (Florida State Archives, RG S-1063, Carton 1, Folder 15).

In some cases the hospital sent telegrams notifying relatives of the death of their loved one,

Mack Friarson died this evening if we have a guarantee of Twenty-Five dollars by Two o'clock tomorrow afternoon we will ship body to Chipley. Later it will cost thirty dollars more for embalming (Florida State Archives, RG S-1063, Carton 14, Folder 44).

The return telegram was simple, "Bury there not able to have body shipped here" (Florida State Archives, RG S-1063, Carton 14, Folder 44).

Some families, while unable to pay shipment charges home, still provided very specific burial instructions. For example, upon the death of J.W. Gatton on January 15, 1928, his wife responded by telegram, "Have priest bury remains with rosary plainly will pay expenses" (Florida State Archives, RG S-1063, Carton 80, Folder 29). There is no indication that the widow was charged anything (burials in the hospital cemetery were generally done without cost), but there is also no indication that a priest was called or that a rosary was included.

There are more than a few records that reveal bodies were picked up by families for transport home. The body of J.H. Brown, who died on August 22, 1927 was turned over to his son who took it back to Brookier, Florida for burial (Florida State Archives, RG S-1063, Carton 79, Folder 72). Sometimes bodies were transported home in cars, other times in trucks.

Some bodies were shipped home. The relatives of Annie Newton were advised by telegram that she died on March 24, 1933 and that embalming and transportation would cost \$62; casket and robe would cost \$55, \$75, or \$95 depending on the quality. Shortly thereafter the

hospital received a telegram advising them to hold the body that the Pharr Funeral Home in Miami was making arrangements to have the remains shipped home (Florida State Archives, RG S-1063, Carton 11, Folder 1).

Some records leave many questions unaddressed. For example, with the death of Leslie Laughlin on December 1, 1928, his relative in Whittier, California responded by telegram,

Financially unable to care for body Leslie Homer Laughlen was in US Navy during World War and should be entitled to government burial please send your records including finger prints (Florida State Archives, RG S-1063, Carton 83, Folder 73).

There is no further paperwork to indicate that the hospital provided any information.

Perhaps the saddest response we identified was that of a mother. Notified that her young son, Carry Griffin, at the hospital for 11 months and 9 days, had died, she responded by telegram,

Go ahead and bury my boy would be glad to have him home but unable to stand expense (Florida State Archives, RG S-1063, Carton 21, Folder 104).

Not all interactions with families were entirely sympathetic. In the case of the death of Mary Coles in 1920 the family failed to provide any instructions regarding burial so she was buried in the hospital cemetery. Shortly thereafter the family sent an insurance form to the hospital. It was dutifully completed and returned, much to the unhappiness of the family since the individual died of syphilis – a disease which precluded the family collecting the insurance. The Superintendent responded,

Replying to your [letter] of recent date relative to the cause of the death of Mary Cole, you are

advised that the cause as stated on blanks filled out for you is correct. I am sorry that she can not get her insurance but we are powerless to make changes in the diseases which people have and from which they sometimes die. The fact is, Mary should not have been brought to this institution for the insane for she was not insane in the ordinary sense of the term. She was seriously ill and in the last states of the disease from which she was suffering. The disease was Syphilis. If her relatives had kept her home only a little longer she could have died at home and been buried there but instead she was sent here and soon died of the disease stated above (Florida State Archives, RG S-1063, Carton 2, Folder 142).

The files reveal that in the cases where the paperwork survives, relatives were treated with the greatest respect that could be offered by an institution that was underfunded and overcrowded.

Efforts were made to encourage prior planning and where this was not done, telegrams concerning an individual's death usually went out in a timely manner. Offers were made to ship relatives home, requiring the cost of embalming, shipping, and casket be paid in advance. If an individual was to be buried at the hospital it was done without cost to the family. Individuals were routinely embalmed. Families could also opt for a more expensive hospital funeral, although the great majority were unable to do so.

These observations are limited to the

twentieth century. The records no longer survive to suggest whether individuals were routinely embalmed in the late nineteenth century.

Colored Men's Building

This structure is of special interest since it is situated between Cemetery 1 to the north and Cemetery 2 to the south.

In 1911 the Superintendent, again facing overcrowding, commented that "the building for negro men, which was erected during 1905-1906, is filled almost to its safe capacity, housing at present over 200 patients" (Anonymous 1911:8). He was authorized to erect a new building for African American men or to make additions to the existing building, at a cost not to exceed \$30,000 (Board of Commissioners of State Institutions Minute Book C, June 20, 1911, pg. 339).

The decision was made to add to the

Figure 24. "Colored Male Building" after its addition in 1912.

existing structure's eastern end, making it the largest structure on the grounds (Anonymous 1913:11). By April 1913, it was reported that the

new Colored Male Building is 320 feet long and 40 feet wide, main part, with two ells 40 ft. by 40 ft. Part of this building [the western] is two stories high and part [the eastern] three stories. The old part of this building, taken with the new part makes a building 520 feet long, 40 feet

Figure 25. The “Colored Men’s Building” and its addition about 1912 (Florida State Archives, RG S-1080, Item 18).

Figure 26. Florida State Hospital grounds about 1920 showing the “Colored Men’s Building” (T) (Florida State Archives, RG S-1081, Item 5).

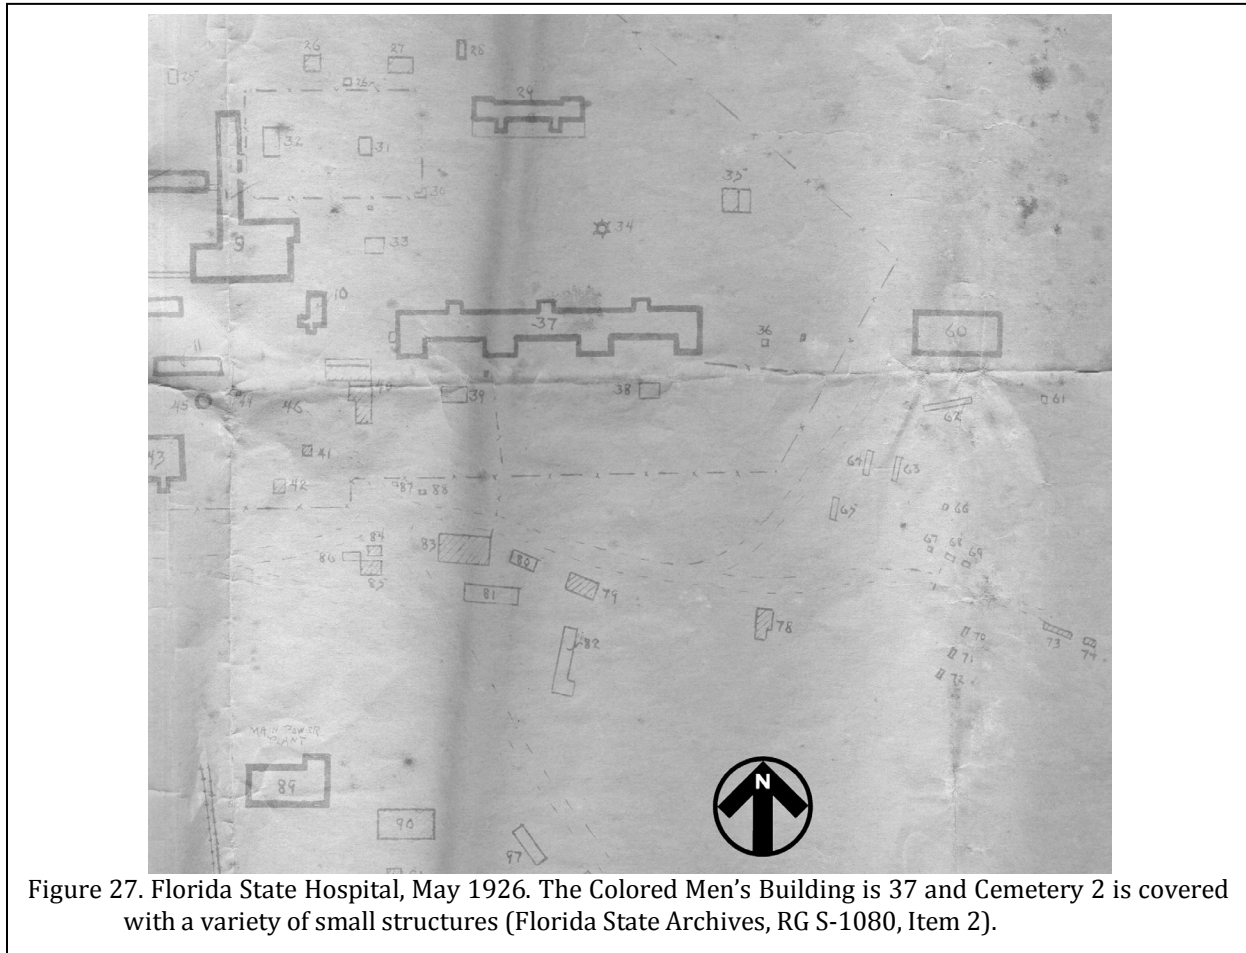

Figure 27. Florida State Hospital, May 1926. The Colored Men's Building is 37 and Cemetery 2 is covered with a variety of small structures (Florida State Archives, RG S-1080, Item 2).

wide, with four ells 40 feet by 40 feet. The old part of the building is in need of paint very badly (Board of Commissioners of State Institutions Minute Book D, April 3, 1913, pg. 92).

Figure 24 shows a photograph of this structure about 1913 taken from the southwest, looking northeast. Cemetery 1 would have been behind or north of this structure, while Cemetery 2 would have been to the south, beyond the board fence that enclosed the colored male yard.

There are three building plans identified that show this structure. Unfortunately only one is dated, showing the property in May 1926. Earlier, however is a drawing that shows the structure as it was undergoing renovation about 1912 (Figure

25). Wagon, mule, and horse sheds are shown to the southwest of the structure. To the west are a bakery and storage building. Nothing is shown where Cemetery 2 would have been located at this time.

Figure 26 shows the structure about 1920. To the west the grounds are quite cluttered, but nothing is shown to the north or south.

Figure 27, illustrating this portion of the hospital grounds in 1926 shows the property south of the "colored male building" filled with a variety of generally small structures. It seems clear that by this time Cemetery 2 was no longer in existence.

Prison Facilities

By at least 1930 the hospital was involved

in the construction of a new “convict” or prison camp. Constructed were a stockade, dining room, cottage for the guards, a water tank, sweat box, and a lookout tower (Anonymous 1933:38). By about 1935 the Superintendent’s report indicated that there were “three prison camps located on the Hospital reservation” (Anonymous 1937:45). Two of these are today known as the East and West Units of the Apalachee Correctional Institution in Jackson County, under the control of the Florida Department of Corrections.

In 1934 the Hospital noted that its Construction Department was primarily responsible for such activities as “construction of all buildings not let on contract, all remodeling, repairing and painting, the manufacture of the Institution’s furniture, [and] surveying for construction and landscaping” (Anonymous 1937:39). It was also responsible for the “operation of a colored prison camp” – perhaps the one constructed in 1930. There was nothing in the reports that suggested any uneasiness combining the functions of a hospital for the mentally ill with a prison camp and the report went on to explain that the,

Service of seventy-five colored state prisoners are used by the Construction Department in connection with the sawmill, and by other departments in terracing and improving the ground and in maintaining proper drainage (Anonymous 1937:39).

Also in 1934, a new one-story frame building with a metal roof had been constructed for the housing of prisoners.

We have not determined when the “Colored Men’s Building” and the detached “Colored Patients’ Dining Rooms” were converted into the River Junction Prison Workcamp, although River Junction was apparently established in 1974 to house adult male inmates. In 1989 it was designated a female facility and in 1991 was converted back to an adult male facility. The facility was closed in October 1999, only to

reopen in June 2000 as a work camp “primarily for elderly inmates” (www.dc.state.fl.us/facilities/region1/116.html). It is attached to the nearby Apalachee Correctional Institution.

Cemetery Expansions

We assume that the cemeteries associated with Florida’s activities in Chattahoochee began with the deaths of those constructing the U.S. Arsenal, including at least one worker and the two officers in charge. This first cemetery, known historically as part of Cemetery 3 (8GD741), was situated a mile to the east-southeast in a low and relatively unattractive area. It was within the confines of the property set aside for the arsenal, but why such a remote area was chosen is unknown.

With the conversion of the arsenal to Florida’s first penitentiary, we have been able to document 26 deaths. Based on the identification of human remains within what is today the River Junction Work Camp (and identified as 8GD138), it seems likely that the penitentiary cemetery was about 1,000 feet east of the arsenal walls. Although we have found no record, the use of what became Cemetery 3 may have been viewed as too remote – and time consuming – for the burial of prisoners. Alternatively, it may have been thought improper to mingle soldiers and prisoners. Regardless, the use of Cemetery 1 was certainly convenient to the penitentiary.

During the first five years of the hospital’s existence its population was relatively small and there were only 40 deaths. In the following five years the number of deaths climbed to 140, and five years after that the number increased to 186. The hospital may have found that Cemetery 1 was too close to various farming activities and was being expanded too quickly. While there is no record, it seems reasonable that in the late nineteenth century, around January 1897, hospital administrators decided to shift the burial ground to what has become known as Cemetery 2 (8GD1001). While still on hospital property, it was further removed from farming activities and provided a seemingly large, open area of 2 acres.

This work included the preparation of maps for each cemetery with the data from extant headboards being transcribed. Figure 28 shows Cemetery 2 as it appeared in late 1923. Division 1 held 211 white female patients; Division 2 contained 205 white males and two white females; Division 3 included 311 African American females; Division 4 held the remains of at least 418 African American males in the west, while on the east end there were an additional 91 white male patients.

showing Location and Names of Graves for the purpose of Removing to New Cemetery on the [Ric]hardson Place. [Th]e Numbers on this plat in Pencil are the [n]umbers which will Correspond to the Numbers [on] the New plat" (Figure 29).

There are indeed numbers, in red pencil, on this secondary plat. In addition, there is a notation on the edge of one (Division 2) that reads, "207 Bodies Disinterred." This number does correspond with the 205 white males and 2 white females reported to be in that division. Each of the various plans has red numbers, although not all graves are numbered. Some graves have blue checks, other have pencil "x" marks. The suggestion is that some graves could not be located or perhaps

In any event, there is considerable

What little we know of Cemetery 2 comes from an effort in the summer of 1923 to document the hospital's two cemeteries (Cemetery 2 and 3).

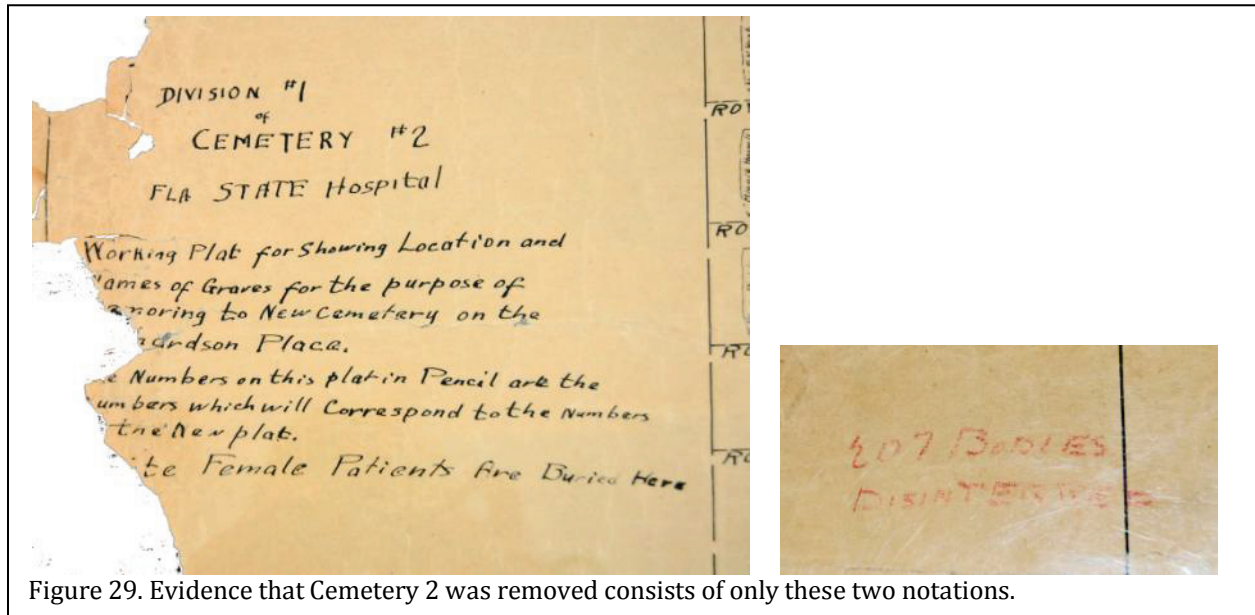

Figure 29. Evidence that Cemetery 2 was removed consists of only these two notations.

evidence to suggest that an effort was made, sometime after 1923, to remove the bodies in Cemetery 2. The indication is that they were relocated to the Richardson Place. We have not, however, found any corroborating evidence in hospital records or in the Board of Commissioners of State Institutions Minute Books. It may be that no contract was let for the removal and instead local prisoners conducted all of the work.

bodies were buried where there was still existing space. So while the cemetery began with two roads forming four divisions, this plan did not last. Both cemeteries, however, were surrounded by barbed wire fences, probably as much to prevent intrusions by farm animals as any sort of human disturbance.

The organization and effort to track

At the same time that Cemetery 2 was being mapped, so too was Cemetery 3 (8GD741). Based on the map, this cemetery consists of burials that took place immediately on the heels of Cemetery 2 being filled.

Cemetery 3, at just under 4.9 acres, is reported to contain 2,248 bodies. Unlike Cemetery 2, the divisions here are not as organized. As one became filled,

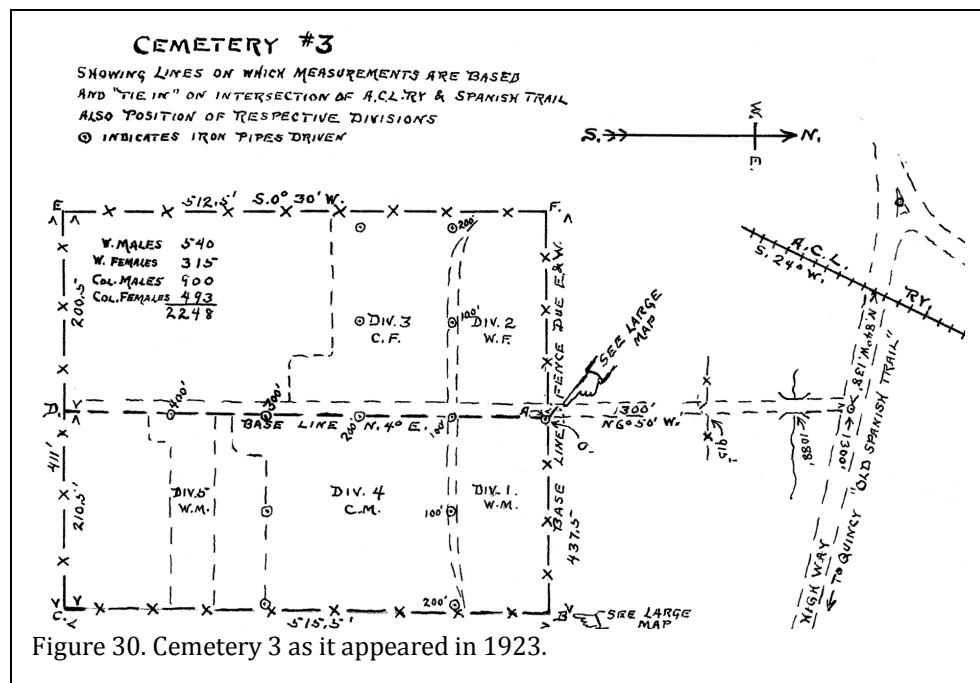

Figure 30. Cemetery 3 as it appeared in 1923.

burials that is evidenced by the 1923 plans was short-lived. By the following year notations were being made in pencil and it appears that the Cemetery 3 map was not being regularly updated.

By about 1926 Cemetery 3 had run out of available space and the hospital opened yet another cemetery – called Cemetery 4 (8GD1002) in this study. Regrettably little is known about this burial ground. Although located south of Cemetery 3, even how it was accessed is not entirely clear. It is likely that graves continued to be marked using headboards, although none survive today. The cemetery was again laid out in a simple square with two bisecting roads and four divisions – separating blacks and white, and males and females. Measuring only 2.5 acres, Cemetery 4 also lasted only a relatively brief period of time and by 1931 Cemetery 5 (8GD1003) was opened by the hospital.

Cemetery 5 (8GD1003) was the first relatively large burial ground, encompassing over 19.5 acres. This suggests that someone at the hospital sought to make Cemetery 5 the last one opened by the hospital, although again we have been unable to find any records regarding planning efforts. The acquisition of the property, however, is documented.

In 1921 the hospital superintendent requested permission to purchase a 76 acre parcel that adjoined the hospital lands. The Board of Commissioners granted their approval for a price not exceeding \$1,500, provided a satisfactory title could be obtained (Board of Commissioners of State Institutions Minute Book F, May 7, 1921, pg. 314). Within just 20 days the superintendent came back requesting approval of a bill for the land from Allen T. Richardson for \$1,485

(Board of Commissioners of State Institutions Minute Book F, May 27, 1921, pg. 331).

The deed for the property reveals that the “Richardson Place” was “the west half of the Northwest quarter, Section 2, Township 3, Range 6 West” (Gadsden County Register of Deeds, DB JJ, pg. 533). The deed reveals that when Jeremiah Richardson, Sr. died intestate in 1893 the property passed to his five sons. Eventually Allen T. Richardson acquired the interests of his brothers. The deed also reveals the purchase price to be \$1,500, not \$1,485 as reported to the Board of Commissioners. Excluded from the sale was a 4 acre tract previously sold to James Jones.

It seems highly likely that this property, purchased May 26, 1921, is the same “Richardson Place” that Cemetery 2 was moved to several years later. Cemetery 5, however, was not begun until 1931 when the first burial of the new cemetery occurred. There is no indication that Cemetery 5 includes any of the burials from Cemetery 2 (although several burials from Cemetery 4 were moved to Cemetery 5 so they would be accessible to families who wished to visit).

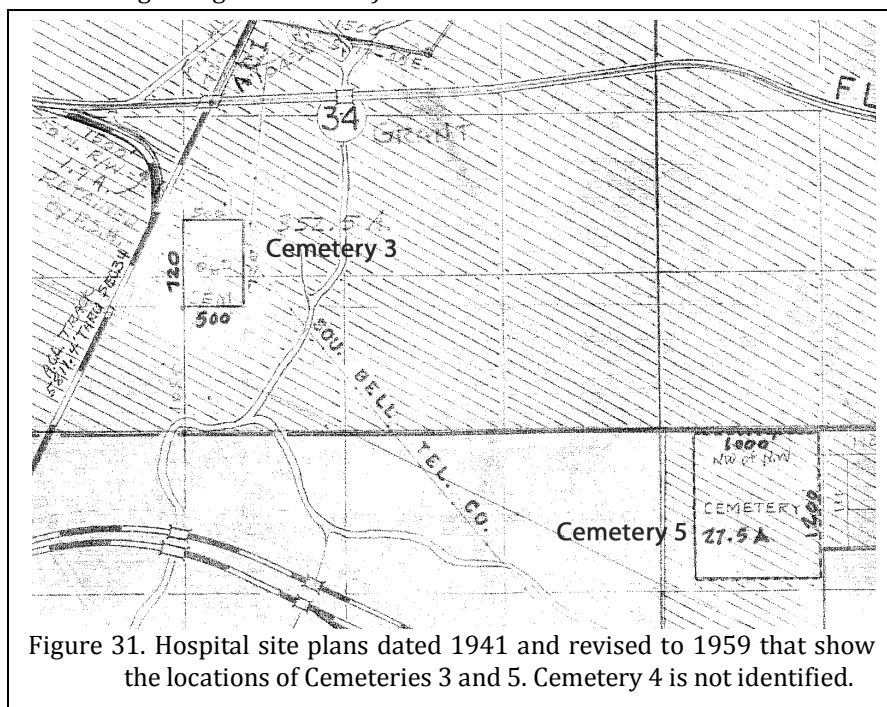

Figure 31. Hospital site plans dated 1941 and revised to 1959 that show the locations of Cemeteries 3 and 5. Cemetery 4 is not identified.

Figure 32. Aerial photo of the Cemetery 1 and 2 area north and south of the “Colored Men’s building” in 1938.

Curiously, a 1947 drawing of hospital property shows Cemeteries 3 and 5, but fails to identify Cemetery 4 (Figure 31). More useful are a series of aerial photographs taken in 1938, 1947, 1955, and 1978.

The 1938 aerial shows the vicinity of Cemetery 1 already well developed. The area of Cemetery 2 is not so developed, although it is no longer possible to see the cemetery road network

(compare Figure 32 with Figure 28). In addition, while the 1923 plans show at least 17 pines and one oak in the cemetery, only a few trees are still present in 1938.

Figure 33 shows the vicinity of Cemeteries 3 and 4 in 1938. Cemetery 3, while still relatively clear of trees, no longer shows evidence of the road network. No graves are visible.

Figure 33. Aerial photo of the Cemetery 3 and 4 area south of what is today U.S. 90 in 1938.

Cemetery 4 is found in a large open area, either a field or possible cut-over area. The road network is clearly distinct as a bisecting road and a circumferential road. Some additional roads are also visible within the cemetery. Although not as clear as one might wish, it appears that in 1938 Cemetery 4 was being accessed by way of the road through Cemetery 3 that then cut across the open fields.

The vicinity of Cemetery 5 is shown in Figure 34. This photo reveals that the cemetery has been laid out with a rigidly north-south road and at least some graves to the east. The access road to the cemetery is also clearly evident coming off U.S. 90 and traveling through what had been terraced agricultural fields. An orchard is still present along the highway.

What isn't clear in Figure 34 is that there is any clearly defined area on the Richardson Place (the northern limit of which was at the northern edge of Cemetery 5) where Cemetery 2 might have been relocated. It appears that in 15 years the location – if it was on this tract – had disappeared.

Figure 34. Aerial photo of Cemetery 5 on the Richardson Place in 1938.

By 1947 relatively little had changed at any of the cemeteries. Figure 35 shows that the area of Cemetery 1 had not changed except that a water tower was constructed on or at the edge of the cemetery. In the area of Cemetery 2, the fence around the "Colored Men's Building" had been changed and a new structure had been built within this enclosure. But it is outside the enclosure, where Cemetery 2 was likely located, that we begin to see considerable construction. The new road network is completed and what is today a laundry has been built. Warehouses and other structures are built to the south of the

Figure 35. Aerial photo showing the vicinity of Cemeteries 1 and 2 in 1947.

main east-west road. If Cemetery 2 was not moved, by at least 1947 there had been major

Figure 36. Aerial photo showing the vicinity of Cemeteries 3 and 4 in 1947.

disturbances.

Figure 36 shows that while Cemetery 3 had been completely abandoned and was rapidly being overgrown, Cemetery 4 was still being maintained. The road network is no longer readily visible, suggesting that there was relatively little traffic; but the absence of vegetation suggests that the hospital may have been working to control vegetation, perhaps using readily available prison labor.

By 1947 the power line easement cutting across the southern edge of Cemetery 4 had been constructed. It does not appear, however, that this initial construction caused much damage to the cemetery, suggesting that it has been maintenance from the 1950s through today that has damaged graves in the easement.

Another easement, running south across U.S. 90 along the east edge of Cemetery 3 before turning to the southeast, has been constructed. Reference to Figure 31 shows this to be a Southern Bell easement and it explains the glass insulators and pole still observed in the woods around Cemetery 3 today.

When we compare Figures 37 and 34 it becomes apparent that Cemetery 5 was begun in an area that was already cleared and available to the hospital. Between 1938 and 1947 the southwestern edge of the field had been allowed to go fallow and part of the cemetery property, not yet being used, was growing up. Several roads are visible in the cemetery, but the overall layout of the property does not appear to have well defined by this point.

To the south of Cemetery 5 is the power line easement that intruded into Cemetery 4. Otherwise, this photo still does not reveal any likely candidates for the relocation of Cemetery 2.

Figure 37. Aerial photo showing the vicinity of Cemetery 5 in 1947.

By 1955 Cemetery 5 had been relatively well defined. There were still numerous clumps of trees along the eastern edge, but roads are clearly defined in several areas.

Between 1955 and 1977 the “Negro Men’s Building” was significantly altered. The western portion was substantively changed, resulting in the south elevation having only 3 ells. The water tower was removed and the structure built on the western portion of Cemetery 1 was further expanded.

In 1978 Florida’s Division of Historical Resources was apparently contacted when skeletal remains were found north of the “Negro Men’s Building” during construction activities. Archaeologist Calvin Jones visited the site and found that burials had been encountered to the west during construction between 1950

The aerial photos from 1955 show continued development around Cemeteries 1 and 2. Additional structures have been added and existing structures have been enlarged. In the area of Cemetery 1 a large structure appears to have been built on the cemetery, probably destroying the western portion (Figure 38). Years later the presence of burials in this area would be noted when yet another construction project “happened upon” Cemetery 1.

By 1955 Cemeteries 3 and 4 had been entirely reclaimed by forest and cannot be readily discerned in the aerial photograph (Figure 39). Although the eastern edge of Cemetery 3 can be identified, the other boundaries are not visible. While perhaps all of Cemetery 4 is still relatively open, it has blended into the rest of the fallow fields in the area. The road network is no longer visible and it is likely that the hospital was no longer doing any maintenance in the vicinity of this cemetery.

Figure 38. Aerial photo showing construction on Cemetery 1 and the vicinity of Cemetery 2 in 1955.

Figure 39. Vicinity of Cemeteries 3 and 4 in the 1955 aerial photo.

and 1955. Those consisted of eight burials in a roughly north-south trench about 4-feet in width. There is no notation regarding what happened to those earlier remains, but apparently there was little concern as additional construction took place about 50 feet to the east less than 30 years later.

Jones found that a new north-south trench, about 40 feet to the east of the burials found in the 1950s, had again identified a line of burials – this time six were identifiable. The maps he prepared are shown as Figure 40. Jones found good skeletal preservation, at least one clothing item (a porcelain button) was found associated with one burial, and wood coffin remains were present.

The site was given the site number 8GD138, but the location was apparently never adequately identified. With the additional work conducted by Chicora Foundation the location was better identified and the site form updated.

Of considerable interest is that the cemetery, thought to present a distance of at least 40 feet square, may contain about 32 burials – suggesting the cemetery is a size consistent for the penitentiary burial ground. Jones also felt the graves were consistent with the early prison cemetery “based on their character of burial and condition of preservation” (8GD138 notes on file, Florida Division of Historical Resources).

A small collection of skeletal remains were retained from the construction disturbance, curated by the Division of Historical Resources as Accession No. 90.47. The remains have been briefly examined for metric and non-metric data. Rather too much emphasis has been placed on the “relatively poor preservation” of the bone, typified by “acid etching and demineralization.” The scientific value of the collection was assessed as “moderate,” presumably because of the incomplete collection and inability to define racial ancestry. It seems that taken in totality, Jones clearly indicates

preservation as far better than suggested by the scattered remains actually collected and retained. Moreover, identification of a largely male African American prison population is highly unusual and it offers considerable opportunities for exploration of diet, disease, and other conditions of late nineteenth and early twentieth century lifeways.

Chattahoochee’s cemeteries were not visited again until October 2005 when Louis Tesar visited the woods around Cemetery 3 and 4 when a cemetery was reported in that area. The Division of Historical Resources had previously recorded what they called the “Chattahoochee Elementary Cemetery,” (8GD714) based on a newspaper account of Cemetery 3. Unfortunately, that newspaper article talked of the cemetery as being in proximity to the school, so the site form significantly misplaced the cemetery location.

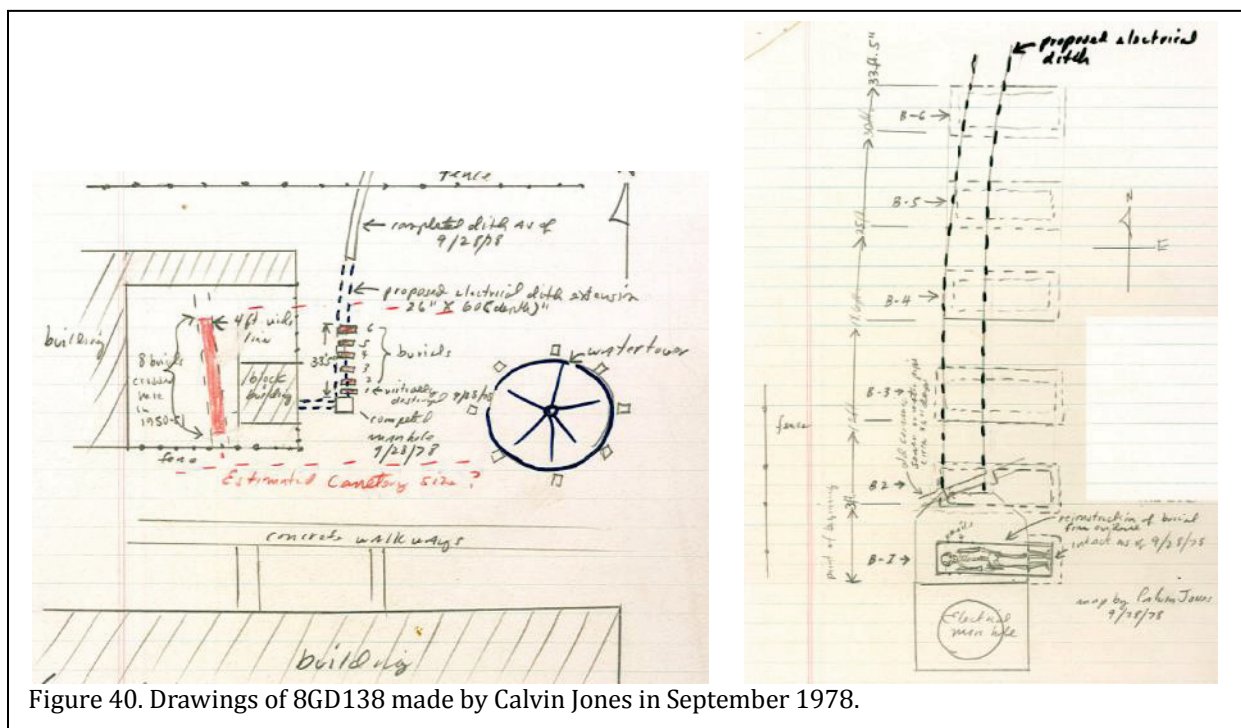

Figure 40. Drawings of 8GD138 made by Calvin Jones in September 1978.

Tesar was at first unable to find the “Chattahoochee Elementary Cemetery,” but did stumble on Cemetery 4. He commented that the cemetery was impacted by the power line easement and that there are “over 200-250 graves in that cemetery” (memo from Louis Tesar dated October 18, 2005). Eventually Cemetery 3 was identified. Tesar described it as “larger than several conjoined football fields” and commented on the number of wooden headboards still extant.

Sadly, neither cemetery was recorded and, in spite of the visit, both cemeteries would remain essentially lost (at least administratively), for another five years.

While local historians and genealogists continued to be interested in the Chattahoochee cemeteries, there seems to have been no further investigations until Ms. Jennifer Wood, with the Department of Corrections, visited Cemetery 3 in October and December 2010. It was those visits that spurred the efforts to identify the cemeteries associated with the Florida State Hospital and ultimately resulted in this study.

HISTORIC SYNOPSIS

Ground Penetrating Radar Study

As part of the assessment and investigation, GEL Geophysics of Charleston, SC conducted a limited ground penetrating radar investigation of Cemeteries 1, 2, 3, and 4. The goal at each cemetery was slightly different, but in general focused on helping the Department of Children and Families better manage the cemetery resources.

For example, at Cemeteries 1 and 2 the goal was to determine, if possible, whether cemeteries were present. Cemetery 1 was thought to be present, based on several accidental encounters, but additional assurance was thought prudent. Cemetery 2 was reportedly moved, so there we sought some confirmation that anomalies consistent with burials were either present or not.

At Cemetery 3 the goal was to better define the southern edge of the property – an area where burials were not clearly visible on the surface and where the existing map failed to show use.

At Cemetery 4 the aerial photographs were thought to show burials extending into the power line easement at the southern edge of the cemetery. The geophysical exploration sought to determine whether burials were actually present in the easement.

This study was conducted by Mr. Brandon Chatham, Geophysical Specialist with GEL Geophysics between February 28th and March 2, 2011.

Methodology

Ground Penetrating Radar

Ground penetrating radar (GPR) is an

electromagnetic method that detects interfaces between subsurface materials with differing dielectric constants. The GPR system consists of an antenna, which houses a transmitter and receiver; a profiling recorder, which processes the received signal and produces a graphic display of the data; and a video display unit, which processes and transmits the GPR signal to a color video display and recording device.

The transmitter radiates repetitive short-duration EM signals into the earth from an antenna moving across the ground surface. Electromagnetic waves are reflected back to the receiver by interfaces between materials with differing dielectric constants. The intensity of the reflected signal is a function of the contrast in the dielectric constant at the interface, the conductivity of the material, which the wave is traveling through, and the frequency of the signal. Subsurface features that may cause such reflections include:

- natural geologic conditions such as changes in sediment composition, bedding and cementation horizons, voids, and water content, or
- man-introduced materials or changes to the subsurface such as soil backfill, buried debris, tanks, pipelines, and utilities.

For this work, the goal was to identify man-introduced changes – the existence of burial features.

The profiling recorder receives the signal from the antenna and produces a continuous cross section of the subsurface interface reflections, referred to as “reflectors” or “reflection events.”

Depth of investigation of the GPR signal is

Figure 41. Use of the GPR in the area of Cemetery 1 at the River Junction Work Camp.

highly site specific, and is limited by signal attenuation (absorption) of the subsurface materials. Signal attenuation is dependent upon the electrical conductivity of the subsurface materials. Signal attenuation is greatest in materials with relatively high electrical conductivities such as clays and brackish groundwater, and lowest in relatively low conductivity materials such as unsaturated sand or rock. In addition, the presence of reinforcement bar in concrete structures may severely attenuate the GPR signal such that objects below the slab may be undetectable. Depth of investigation is also dependent on antenna frequency and generally increases with decreasing frequency; however, the ability to identify smaller subsurface features is diminished with decreasing frequency.

GEL Geophysics uses GPR antennas that are internally shielded from aboveground interference sources. Accordingly, the GPR signal is not affected by nearby aboveground conductive objects such as metal fences, overhead power lines, and vehicles. Therefore, no spurious reflection events are generated on the GPR data by above ground features, which could lead to false interpretation of subsurface anomalies.

Field Procedures

The geophysical investigation was performed using a RAMAC GPR system configured with a 250 MHz antenna array. The areas of investigation included the southern boundaries of the "Cemetery 3" and "Cemetery 4", the entire area shown as "Cemetery 2," and the outlined area shown for the "Cemetery 1" within the existing prison. The GPR data was collected with 5 feet spacing between profiles, unless undergrowth, buildings or other cultural features prevented access. The geophysical data was processed and interpreted in the field, and anomalies having the signature consistent with potential graves were marked in the field using paint.

The data points were collected by Chicora and entered onto their maps of the various cemeteries.

Results of the Investigation

Cemetery 1

Cemetery 1 (Figure 42), a potential burial site, was investigated within the existing prison facility where graves had previously been exposed. GPR profiles were collected on 5-foot spacings where permitted within the outlined area.

Two utilities duct banks are located in the area where the graves had been exposed. Their presence limited the effectiveness of GPR in that location. Due to the concentration of cultural interferences and underground utilities, much of the area yielded GPR data that was inconclusive. However, 10 anomalies were marked within the explored area (5 in each row shown).

Cemetery 2

Cemetery 2 is within the Florida State Hospital grounds, as shown on Figure 43. GPR profiles were collected north/south with 5-foot spacing throughout the outlined area plus a 50

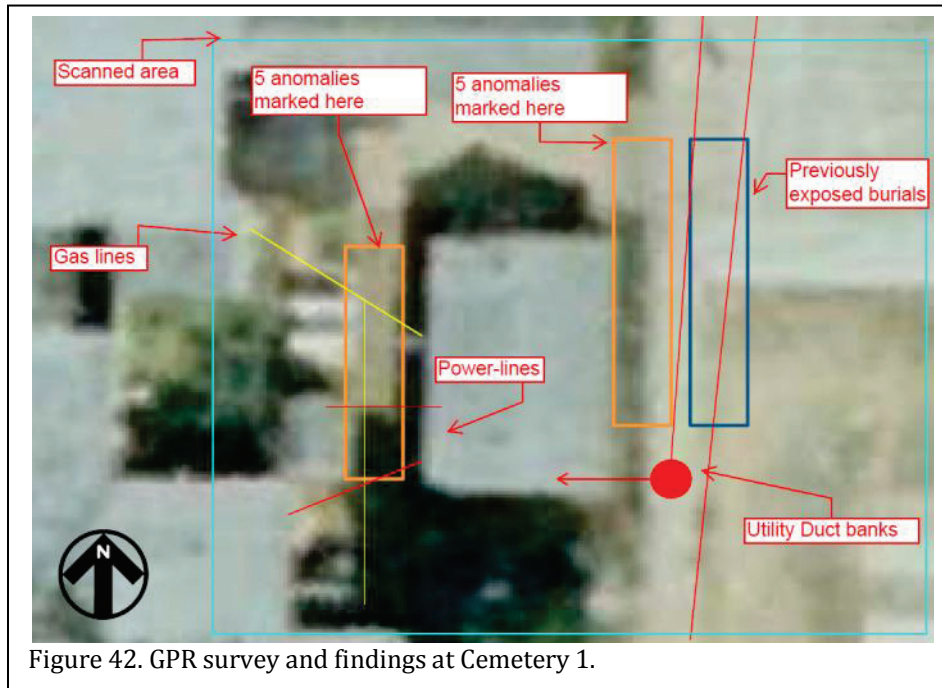

Figure 42. GPR survey and findings at Cemetery 1.

feet buffer. Much of the area was omitted due to cultural features such as buildings, curbs, decorative planters etc. In addition, there are a significant number of underground utilities, some of which were individually identified due to the

Creek. Both corners of the southern boundary were investigated, and potential burial anomalies were marked. Profiles were extended approximately 50 feet past (to the south) the last occurrence of any potential burial anomaly. Much

of the southern boundary of Cemetery 3 had a significant brush pile limiting access to the full extent of the southern boundary. Anomalies were found along the northern edge of the brush pile, yet none were identified to the south of it. Profiles were extended on the southern side of the pile where possible. The data showed a layer ranging from four to six feet characteristic of the top of the water table or a clay or other geologic horizon. The anomalies marked in this area were fairly shallow (approximately 2.5 to 3.5 feet below the surface).

Figure 43. GPR survey and findings at Cemetery 2.

utility density.

Only three potential burial anomalies could be identified in the study area. These were marked in the northeastern quadrant of Cemetery 2. The surrounding black outline is the posited boundaries of the cemetery based on the available mapping data (see Figure 28).

Cemetery 3

Cemetery 3 is located in a wooded area south of US-90 and adjacent to Mosquito Creek. Both corners of the southern boundary were investigated, and potential burial anomalies were marked. Profiles were extended approximately 50 feet past (to the south) the last occurrence of any potential burial anomaly. Much of the southern boundary of Cemetery 3 had a significant brush pile limiting access to the full extent of the southern boundary. Anomalies were found along the northern edge of the brush pile, yet none were identified to the south of it. Profiles were extended on the southern side of the pile where possible. The data showed a layer ranging from four to six feet characteristic of the top of the water table or a clay or other geologic horizon. The anomalies marked in this area were fairly shallow (approximately 2.5 to 3.5 feet below the surface).

Cemetery 4

Cemetery 4 was

investigated to attempt to determine its southern boundary. The wooded area north of the power line easement had extensive evidence of burials, such as sunken graves right up to the edge of the easement. GPR profiles were collected from the edge of the known burials heading south across the power-line easement. Numerous anomalies were marked up to 25 feet into the existing easement.

Summary

The geophysical technology employed in this investigation is non-intrusive. As with any non-intrusive technology, there is a possibility that features may exist at the cemetery sites that are not detectable due to method limitations, subsurface soil conditions, or the occurrence of features below the depth of penetration of the signals. The maximum GPR system penetration at the site varied from 6-9 feet below land surface. Any subsurface objects below the depth of penetration were not detectable during this investigation. The extensive cultural features, underground utilities, and extensive root networks in the forested areas along with the presumed deterioration and condition of the burials all contributed to less than ideal conditions for identification using GPR. The geophysical anomalies identified within these areas are not specifically indicative of burials. However, all of the anomalies identified in these areas have non-specific characteristics that warrant further investigation.

The presence of at least 10 potential burials at Cemetery 1, combined with the 14 identified during two episodes of trenching, brings to 24 the suspected minimum number of interments at this location.

At Cemetery 2 the identification of three possible anomalies may suggest some burials were not removed. It is also possible that these anomalies are the remnants of burial removals. Unfortunately there has been no published study comparing original burial excavation and burial exhumation signatures. Regardless, since only a few features were identified, it seems likely that

this burial ground may have been removed.

Anomalies at Cemeteries 3 and 4 were distinct and generally easily discernable. As noted, burials at the southern edge of Cemetery 3 appear to be shallow, possibly the result of the high ground water. Anomalies at Cemetery 4 are also shallow, but here the power line easement construction appears to have removed several feet of overlying soil.

Assessment of Cemetery 1

Cemetery 1 (8GD138) is situated within the River Junction Work Camp, on TIITF property used by the Florida State Hospital and subleased to the Department of Corrections. It is situated on parcel 1-34-4N-6W-0000-00200-0100 (see Figures 2, 3, and 42). The area has been heavily impacted by construction today associated with the River Junction Work Camp, although the cemetery was likely “lost” while the property was

vehicular access; there is a gate off Pecan Lane at the north end of the facility. With no need for routine vehicular access, circulation is not an issue. In most areas where the cemetery is thought to exist, there is inadequate room for vehicular travel. Some open space does exist east of the posited cemetery boundaries, in an area where the water tower stood during the early twentieth century. That area today consists of a

being used by the Florida State Hospital. We estimate that the cemetery is confined within a space of about 50 by 50 feet.

Many of the issues typically considered during a preservation assessment are not significant concerns in the case of Cemetery 1. Nevertheless, they will be briefly outlined for the sake of consistency.

Road and Pedestrian Issues

Vehicular Access and Circulation

The cemetery is located within the fenced confines of River Junction and there is no routine

shuffle board and basketball court.

Pedestrian Access

Pedestrian access is controlled and requires extensive security clearance and protocols. Thus, while pedestrian access is technically possible, it is difficult and we cannot foresee any significant site visitation. The cemetery is essentially inaccessible to the general public, as well as to individuals who may claim to have ancestors buried there.

In addition, once the cemetery is accessed, there is nothing to suggest its presence. The area is heavily impacted by various prison

facility buildings and activities.

Universal Access

Universal access is technically possible since the facility has ramps and the various gates are of sufficient width for wheelchairs. However, since the cemetery is not likely to attract visitation, ADA compliance is not likely to become an issue.

Security Issues

The typical security issues faced by most cemeteries are vandalism and theft. Neither is likely to be a concern at Cemetery 1, not only because it is located within a prison facility, but also because there are no longer any above grade indications of the cemetery or its burials.

In fact, as Figure 45 reveals, the cemetery has been extensively damaged by various construction activities, including utility lines (gas, electrical, and drainage were all noted) and the construction of several buildings (all concrete block on at-grade concrete slabs).

A much greater threat to this cemetery than vandalism, theft, or graffiti is the continued operation of River Junction or even the Florida State Hospital should they reclaim the property. The loss of cemetery integrity is the result of institutional decisions, not outside forces.

Figure 45. Area of Cemetery 1. The top photo is looking north on the east side of a concrete block structure situated in the middle of the cemetery. It is in this area that graves were most recently identified in 1978. The bottom photo is looking north on the west side of that same structure. Burials were identified on both sides.

Fixtures and Furnishings

Like other topics discussed thus far, Cemetery 1 exhibits no cemetery buildings, cemetery fences, plot fixtures, or other amenities. All features associated with the burial ground have disappeared and today nothing remains that

might suggest a cemetery once existed at this location.

Landscape Maintenance

Nothing remains of the original cemetery landscape and today maintenance practices are those associated with institutional buildings and grounds.

As previously discussed, Cemetery 1 remained relatively untouched into the 1950s (see Figure 38, for example). It wasn't until the mid-1970s that the cemetery began to be covered by construction and damaged by utility construction. The presence of a probable voodoo feature – hair and paper within a sealed bottle – buried in the area of the cemetery also suggests that the cemetery was recognizable at least into the early twentieth century.

Other Maintenance

In this category we typically consider issues such as trash or signage. Such maintenance issues are not applicable to the current situation and we don't recommend any signage.

Conservation Issues

There are no remaining markers or other features associated with the penitentiary burying ground, so there are no conservation issues to be considered.

It is, of course, appropriate to note that the Secretary of Interior's Standards for Preservation (applicable to sites, including cemeteries, eligible for inclusion on the National Register of Historic Places) also address archaeology, noting succinctly that, "Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken" (http://www.cr.nps.gov/hps/tps/standguide/serve/preserve_standards.htm).

Cemetery 1 has been poorly protected and suffered considerable damage as a result. It is all the more tragic that this damage has occurred

to a cemetery and the human remains that it contains. It is fortuitous that the remains appear to have been deeply buried – this may have helped minimize disturbance associated with modern activities.

Recommendations

Significance

This site is no longer recognizable as a cemetery. Nevertheless, the available information, collected by archaeologist Calvin Jones in 1978, suggests the remains are deeply buried – up to 4.7 feet below grade. This would serve to protect the site from a range of modern disturbances and construction features.

Jones also indicated that the site exhibited good wood and metal preservation. While the skeletal remains exhibit the type of damage that would be expected from 100 years of exposure to acidic soils, it appears that both metric (these are standard measurements defined in the nineteenth and twentieth centuries for recording the size of various attributes of the skeleton) and non-metric (these are discontinuous or discrete traits that are anomalies in the normal anatomy of the skeleton; they are not measurable and simply recorded as present or absent) analysis is possible.

Thus, there is good reason to expect that site integrity – the condition of the remains and their original context – is high.

There should be little question that the information contained in the cemetery can address significant research questions.

The analysis of mortuary items (coffin hardware, for example) and personal remains (such as clothing) contributes to our understanding of social status, ideologies, possible age and sex, as well as temporal dating of burials. The work may also supplement folklore, oral history, and genealogical research.

The analysis of the skeletal remains, including morphological characteristics, discrete traits, dental features, and pathological conditions

provides critical data on diet, disease, mortality, and health.

There are other studies that can address an even broader range of questions. The presence of parasites can be examined by treating the soil collected from the grave in order to rehydrate the ova of any parasites that were present in the lower intestines, such as hookworm, echinococcus, and tapeworm. Blood grouping, HLA typing, and antibody absorption, while possible contamination is a concern, can address a broad range of significant genetic questions. Where other aging attributes are ambiguous histomorphometrics, which involves the sectioning of long bones to count osteons, can assist in aging the remains. Carbon isotope analysis may address differences in diet. Trace element analysis may also address dietary questions, with zinc, copper, molybdenum, and selenium usually associated with animal protein and strontium, magnesium, manganese, cobalt, and nickel generally associated with vegetable materials. Heavy metals analysis, often focusing on lead, can be examined to explore health and sources of contamination in the diet. Finally, radiographic studies can identify transverse lines of increased density on the ribs, on both ends of the tibia and on the distal end of the femur to study dietary stress.

These are all data sources where the only available information will be provided by bioanthropological studies. Other sources, such as prison records, either do not exist or fail to provide meaningful data. In some cases, the bioanthropological data can be compared to documents in order to determine if those documents are accurate (for example, regarding causes of death).

Thus, Cemetery 1 is recommended as eligible for inclusion on the National Register of Historic Places under Criterion D, information potential at the state-wide level.

Legal Protection

In simple terms, Florida Statute 872.02 makes it illegal to willfully and knowingly disturb human remains. Disturbance is a felony of the

second degree.

Florida Statute 872.05 deals specifically with unmarked burials. This law requires that all work cease and law enforcement, including the local medical examiner, be notified; all activity that may affect the remains is to cease. If the remains are not considered forensic (i.e., have been buried over 75 years), then the State Archaeologist is to be notified and the Division of Historical Resources may assume jurisdiction over the remains.

The statute does not require excavation of the remains “unless circumstances require excavation to prevent destruction of the human skeletal remains” (Florida Statute 872.05.09).

Treatment

While the preferred treatment for archaeological sites is typically preservation in place, such a recommendation for Cemetery 1 is not professionally responsible. An effort was made to allow construction activities in 1978. Since that time additional utilities have been constructed and just as the cemetery was “forgotten” after its exposure in the 1950s, it was again “forgotten” after Jones’s examination in 1978.

Consequently, we recommend that the remains in this cemetery be archaeologically excavated, fully analyzed, and eventually reburied. This process, of course, is not as simple as it may at first sound.

It will be necessary to make the cemetery fully accessible to archaeological study. This will include the ability of archaeological crews and equipment to have full and unfettered access to the property. Security fences will need to be relocated; utilities must be identified, marked, and in some cases shut-off for the safety of workers; many movable objects will need to be removed; and concrete pads will need to be broken up and hauled away. At least one building – identified as 11430006 – is almost certainly sitting atop burials and will need to be removed in order to allow access to the remains (alternatively, it may be

possible to cut through the floor and excavate under the building roof).

Given the depth of the burials, it will be necessary to remove as much of the overburden as possible using mechanical equipment, such as track hoes or small excavators with toothless buckets. Once each grave has been exposed, it will require between 1-2 days for a team of two archaeologists to fully excavate, document, conduct the in-situ analysis necessary, and remove a burial.

With the remains removed from the ground, the prison would be in a position to begin restoring the facilities and buildings. Analysis of the remains, however, would likely require 4-6 months by a bioanthropologist.

Following the publication of the results of the work, the remains should be respectfully reinterred at a suitable cemetery with perpetual care. Typically human skeletal remains can be reburied using the Wilbert Funeral Services Loved & Cherished 31 inch combination infant casket and vault (http://www.wilbertonline.com/store/item.asp?ITEM_ID=114&DEPARTMENT_ID=125). The benefit of this approach is that each body receives its own coffin, providing appropriate respect and dignity. The Wilbert, however, does not require a separate vault, so the overall cost is reduced.

With the removal of Cemetery 1, we recommend that the original site be marked on Pecan Lane with a Florida Historical Marker. Typically these markers are used only for Heritage Sites and Heritage Landmarks, both of which require the retention of significant elements. The State Historical Marker Council should be asked

for a waiver. It is our belief that it is appropriate to mark the original cemetery location since at least some of the remains will not be recoverable. The marker provides an opportunity to make the public aware of the penitentiary burials, their loss, and eventual removal to a safe location.

We anticipate that the excavation of these remains and their analysis will cost about \$230,000. This does not include possible security issues such as fence relocations or damage to fences, concrete, or buildings currently on top of Cemetery 1 or in the immediate vicinity.

Figure 46. Example of the Wilbert Loved & Cherished casket and vault combination suitable for reburial of human skeletal remains.

Assessment of Cemetery 2

Cemetery 2 (8GD1001) is situated about 600 feet southeast of Cemetery 1 on property of the Florida State Hospital. It is situated on parcel 1-34-4N-6W-0000-00200-0100 (see Figures 2, 4, and 43). Begun about 1897, it represents the first cemetery documented to have been used by the hospital. Unfortunately, there is no record of where patients were buried prior to 1897, so there are perhaps over 500 burials unaccounted

Road and Pedestrian Issues

Vehicular Access and Circulation

The Florida State Hospital, with the exception of the forensic units, is an open campus and visitors may easily drive Main Street through what was once the area of Cemetery 2. Main Street

Figure 47. The area of Cemetery 2 as it exists today. Panoramic view is to the west.

for (although some may be found in Cemetery 3).

There is some evidence that Cemetery 2 was moved about 1923, although where the bodies were reinterred is unknown. GPR studies of Cemetery 2 have found little evidence to suggest that burials still exist at this location, although it is possible that some remains were not removed or were not entirely removed.

By 1947 structures and roads had been built on the location of this cemetery and by 1973 the area had taken on its modern appearance. There are relatively few areas of this cemetery that are still sufficiently intact enough that any remaining burials might be preserved.

As with Cemetery 1, many of the issues typically considered during a preservation assessment are not significant concerns. We have, however, briefly reviewed the typical issues.

passes the remaining armory of the U.S. Arsenal and terminates at a small pond. The only “circulation” within what was the cemetery are today various parking lots for the laundry, transportation building, and operations and facilities. Interspersed are planting areas. There are abundant utilities running through the area, including electrical, water, gas, sewer, and storm water. Many of the structures are constructed partially below grade or have excavations for loading docks.

Pedestrian Access

The entire cemetery, except for areas now under buildings, is available for pedestrian access. However, there is no evidence of the cemetery and nothing remains to view or commemorate those who may once have been buried here. As described above, the area is heavily impacted by various hospital buildings and activities.

Universal Access

Universal access for this area would be difficult given the steep slopes. However, since the cemetery is not likely to attract visitation, ADA compliance is not likely to become an issue.

Security Issues

The typical security issues faced by most cemeteries are vandalism and theft. Neither is likely to be a concern at Cemetery 2, not only because it is located within the hospital facility with a security department, but also because there are no longer any above grade indications of the cemetery or its burials.

Figure 48. GPR study in the lawn area that was once Cemetery 2. View is to the east; Main Street is in the background.

In fact, as Figure 47 reveals, the cemetery has been extensively damaged by various construction activities, including utility lines and the construction of multiple buildings.

Fixtures and Furnishings

Like other topics discussed thus far, Cemetery 2 exhibits no cemetery buildings, cemetery fences, plot fixtures, or other amenities. All features associated with the burial ground have disappeared and today nothing remains that might suggest a cemetery once existed at this location.

Landscape Maintenance

Nothing remains of the original cemetery landscape and today maintenance practices are those associated with institutional buildings and grounds. For example, the original cemetery plans indicate the presence of many pines, as well as an oak. Today no trees remain in the cemetery area.

Other Maintenance

In this category we typically consider issues such as trash or signage. Such maintenance issues are not applicable to the current situation and we don't recommend any signage until it can be determined if the cemetery has been moved from this location.

Conservation Issues

There are no remaining markers or other features associated with Cemetery 2, so there are no conservation issues to be considered.

It is, of course, appropriate to note that the Secretary of Interior's Standards for Preservation (applicable to sites, including cemeteries, eligible for inclusion on the National Register of Historic Places) also address archaeology, noting succinctly that, "Archeological resources will be protected and preserved in place. If such resources must be disturbed, mitigation measures will be undertaken" (http://www.cr.nps.gov/hps/tps/standguide/serve/preserve_standards.htm).

Cemetery 2 may have been moved, but it is distressing that the hospital failed to adequately document the removal and then failed to adequately or appropriately document the reinterment location.

Recommendations

Significance

This site is no longer recognizable as a cemetery. The GPR study found only a small area where several anomalies might suggest the possibility of graves – either intact or possibly disinterred.

There is, however, ample documentation from Cemetery 1 that indicates any human remains present are likely to be in relatively good condition, if undisturbed. We have also previously explained the large amount of information that can be obtained from the recovery of human remains and its extraordinary scientific value.

Legal Protection

We have previously outlined the provisions of Florida Statutes 872.02 and 872.05. The applicability of these laws are uncertain since there is a claim (unsubstantiated) that the cemetery was removed.

Treatment

Beyond the scientific and legal issues, there is a fundamental issue of human decency that requires the question of the cemetery's removal to be resolved.

If the cemetery has been removed, then the focus should be directed toward the identification of the new burial location. If the cemetery was not removed, but simply destroyed by hospital construction, then the issue becomes one of accountability.

Consequently, we recommend limited archaeological investigations to ascertain whether the cemetery was removed.

This work should involve the

identification and marking of all utility lines in the open, grassed area south of the River Junction fence. This area represented the northwest edge of the cemetery including portions of Division 1 (white females) and Division 2 (African American females).

With utilities marked, a track hoe or small excavator with a toothless bucket should be used to strip off the upper foot of overburden in order to expose the underlying subsoil where grave stains would be clearly visible. Since the soils are reported to be the Cowarts-Nankin complex, the upper 0.6 foot is likely a dark brown loamy fine sand. Below this to about 0.9 foot is a strong brown fine sandy loam. Distinct grave outlines may not be visible until a depth of about 1.5 to 2.0 feet.

The literature documenting disinterments is not abundant, but there is some indication that remains are typically not removed as neatly as they are buried. Connolly and his colleagues have recently reported on an Oregon cemetery where some graves were removed in 1901. Those disinterred features were amorphous, suggesting only vague knowledge of the burial location and perhaps removal by several individuals digging in different areas. Moreover, virtually all of the “removed” burials were found to contain both skeletal remains as well as clothing items. Thus, removal was, at best, partial (Connolly et al. 2010). While limited, this may be sufficient to help identify the archaeological features encountered at Cemetery 2.

We anticipate that this additional archaeological research to ascertain whether Cemetery 2 was removed will require about \$20,000.

Additional Research

If Cemetery 2 has been removed, it is unlikely that any further archival research will result in the identification of this new burial location. While it is always possible that a map will surface with additional details, we believe that the bulk of the available records have been examined. The only clue is that in 1923 the burials

were reported to have been removed to the Richardson Place – which we believe to be the property purchased in 1921 from Allen T. Richardson and where Cemetery 5 is today located.

It is possible that a field survey of the Richardson property, combined with more intensive examination of aerial photographs, may identify where the remains from Cemetery 2 were reinterred. It may also be useful to compare the available maps of Cemetery 5 with the actual cemetery area in the hope of identifying some anomalous locations. Eventually additional GPR work may be beneficial.

We can account for only one burial from Cemetery 2, that of W.F. Horne, a white male who died in 1909. He was originally buried, with a marker, in Section 2, Row 9, Grave 27 of Cemetery 2. Today his marker at least is in Cemetery 5, A West 500. Other burials with markers in Cemetery 2 have not been accounted for.

We anticipate that upwards of \$30,000 may be required for the effort to identify where Cemetery 2 was relocated.

Assessment of Cemetery 3

Cemetery 3 (8GD741) is situated about 0.5 mile southeast of Cemetery 2 or about 1.5 miles by road from the center of the early twentieth century hospital complex. It is situated on parcel 1-34-4N-6W-0000-00100-0100 (see Figures 2 and 5), which is leased by TIITF to the Department of Corrections. That agency has turned management of the property over to Prison Rehabilitative Industries and Diversified Enterprises, Inc. (PRIDE), a nonprofit corporation authorized by the Florida Legislature in 1981 to operate the state prison industries. They do not appear to be actively using the property, so the purpose of the lease is unclear.

Although Cemetery 3 contains the burials of two officers who died building the U.S. Arsenal in 1835, patients were not buried in this cemetery until 1905, immediately after Cemetery 2 ceased being used. The cemetery was divided into essentially eight different sections, although only five formal “divisions” are identified (see Figure 30). Early records for the cemetery include a map prepared in 1923 and various journals prepared by the hospital

Figure 49. Overviews of Cemetery 3. The upper photo shows Division 2 looking southwest. The lower photo shows Division 4 looking west.

undertaker. While these records are relatively complete early in the cemetery’s history, by the mid-1920s, the record keeping had declined.

About 1927 the cemetery was closed and a new cemetery (Cemetery 4) was opened by the hospital.

Cemetery 3 does, however, contain at least 18 burials identified as dating from 1885-1891. Several of these can be matched to patients reported on the 1885 census of the institution, suggesting that Division 6 of this

cemetery may represent burials predating Cemetery 2.

By 1938 Cemetery 3, abandoned for about a decade, was already being overtaken by trees in some areas. By 1948 only the eastern half of the cemetery was still relatively open and clearly defined in aerial photographs. In 1955, 27 years after its last use, the cemetery had blended back into the forest and was no longer recognizable in aerial photographs. Situated in an area of woods, the cemetery was not damaged and remains today largely as it was when last used. Many of the wood headboards are still present, although none have their original numbering system still intact. Graves are generally easily recognizable because they have sunken. A few of the graves are marked by commercial stones, erected by family members determined to prevent their loved ones from becoming nothing more than a number or being forgotten as their wood headboard rotted

and was lost.

Road and Pedestrian Issues

Vehicular Access and Circulation

The original access to Cemetery 3, while running off U.S. 90 as it does today, has been lost.

The current access is a rough, single lane road (essentially a trail suitable for 4-wheel drive vehicles) that has recently been cut through the woods by inmates at River Junction. It terminates at what was originally the central entrance road to the cemetery.

This current access road is just east of the abandoned railway corridor that once crossed U.S. 90 and is on a slight rise that requires vehicles turn off the paved road at the rail easement and then turn south onto a cleared utility line cut before entering the woods.

The road is situated primarily on Telogia sandy loam, a somewhat poorly drained soil with very slow water permeability. From December through April the seasonal high water table may be within 1.5 to 3 feet of the surface. The road to the cemetery also crosses about 100 feet of Ousley, Rutlege, and Pickney soils. These soils are also somewhat poorly drained, but they are also rated as commonly flooded from December through April and August through September.

While the existing trail is adequate for initial maintenance efforts, routine maintenance of the cemetery, as well as allowing families access to the burials of their loved ones, requires that the Florida State Hospital construct a suitable road to the cemetery.

The Department of Children and Families has internal architectural, engineering, and construction expertise. Sometimes, however, limited use roads such as this are over engineered. We offer these few comments solely for consideration.

We believe that the light use anticipated will allow the construction of an unpaved, but permanent road. The cost may be estimated at about \$5 per linear foot, or approximately \$4,000.

A road width of 14 feet is adequate for a single lane road and yet is wide enough to enhance surface drying during wet periods. We recommend shoulder widths of 4 feet since it is possible that maintenance may require the use of towed trailers. Ditches may be required in some

areas, but should be as limited as possible. Brush, trees and roots should be removed from the part of the right-of-way needed for surfacing and ditches. Beyond that, clear 2 to 3 feet or more of brush and trees on either side of ditches to further enhance surface drying.

The corridor is relatively straight; however, the basic rule is to have a minimum radius horizontal curve of 35 feet for short-body vehicles when only low volume traffic is anticipated, as in this case.

The traditional gravel road construction is a crowned road. These generally have cross drainage culverts, ditches on the sides of the roadway, and water turnouts at intervals along the road. Also, the roadbed cross section itself normally slopes downward from a high point in the center to the shoulders.

Since it is critical to prevent water build-up in ditches, water should be channeled away from the road into adjacent vegetated areas for dispersion.

The road should be constructed using geotextile fabric to reduce rutting, improve drainage, and increase the loadbearing capacity of the road. With geotextiles, crushed rock over washed gravel can support the light traffic anticipated, but crushed rock over large 3-inch diameter rock is better.

Once constructed, we recommend that the road be kept closed except for visitation or maintenance. Maintenance should be minimized during wet weather or periods of freeze-thaw in order to prevent damage to the road. A program of periodic road maintenance, including regrading, should be developed.

The hospital should evaluate whether the construction of the suggested road will require federal or state permitting.

In addition to the road itself, we recommend the creation of a parking and turn around area. For most vehicles this need not be larger than about 12 by 24 feet.

Originally the cemetery contained two roads, initially dividing the burying ground into four divisions. These roads were likely little more than dirt paths and there is no clear indication of them today. We do not recommend that the roadways be re-established since it is possible that some of the roads were partially incorporated into burial areas. We do not believe the roads are so essential as to warrant additional archaeological investigations to ensure that no graves are present.

As an alternative, it would be appropriate to entirely remove the trees in the roadways and this will be discussed in greater detail in the landscape maintenance section.

Pedestrian Access

Access in the cemetery is currently limited by the dense brush and numerous sunken graves. Currently efforts are being made to remove the undergrowth and this is an excellent initial step in opening the cemetery and making it suitable for visitation. The issues with vegetation removal will be discussed in more detail in a following section.

There is no evidence that pathways were present historically in this cemetery. Typically, institutional cemeteries were heavily used, exhibited little vegetation, and there was not space for pathways. Any that might have existed received no special treatment. We do not believe that visitation will be sufficient to create wear of the groundcover or erosion. Thus we do not recommend the development of pathways at this time.

Universal Access

There are few naturally limiting factors for ADA compliance or universal access at the cemetery. The topography is such that ramps are unnecessary. The major limiting factor is the poorly drained soil that would make wheelchair access problematical. Likewise, the proposed gravel road from U.S. 90 would be impossible for wheelchair movement.

While extensive modifications would be out of character, at the present level of use we are not convinced that there is a demand adequate to justify either the expense or the damage to the historic fabric.

In addition, the ADA or the Rehabilitation Act of 1973 is generally not interpreted to apply to cemeteries by the Department of Justice. Nevertheless, we are an aging population and it would be appropriate for the hospital to establish a protocol that would allow staff to assist wheelchair patrons or other disabled reach specific gravesites in the cemetery.

Some cemeteries have achieved this goal by training their staff in the correct means of assisting the disabled and by providing golf carts to help ferry individuals to grave locations. This should be a long-term goal of the hospital for the cemetery.

Security Issues

The typical security issues faced by most cemeteries are vandalism and theft. Neither has been a significant threat at Cemetery 3 in the past, as so few individuals knew of its existence. It is likely that as the presence of the cemetery becomes better known, there will be relic collectors looking for wooden headboards and other artifacts. It is therefore essential that the Florida State Hospital include the cemetery in its security plans.

Specifically we recommend that a more substantial gate – perhaps similar to the one present at Cemetery 5 – be erected. This would not only (with the road improvements) give the cemetery a look of greater dignity and worth to the institution, but it would also signal that the property was being cared for. Signage will be discussed in a following section, but we do recommend that the property be clearly posted.

We also recommend that the hospital security detail place the cemetery on its periodic rounds. With the gate kept locked the vehicles of any unauthorized visitors would be immediately identifiable.

Figure 51. Southern portion of Cemetery 3 showing clearing conducted by work crews from River Junction Work Camp.

River Junction).

Landscape Maintenance

Initial Clearing

Work crews from River Junction are currently clearing the cemetery. During our on-site meeting we recommended the removal of all trees 4-inches dbh or less, as well as all brambles and other understory vegetation. Figure 51 shows the tremendous difference removing the understory vegetation makes.

All removed trees should be cut as low to the ground as possible in order to minimize trip hazards. A trimmer/brush cutter (such as the Stihl FS 550 Brushcutter/Clearing Saw) is a good choice for such work.

The goal is to produce a generally clean and easily walked cemetery. Care was to be taken to avoid intentional plantings, as well as damage to the existing wooden headboards.

We recommended that as much of the removed vegetation as possible be chipped on-site and distributed over the cemetery in order to help reduce future understory vegetation.

It is very important to prevent accumulations of dead wood at the periphery of the cemetery. These piles provide harborage for rodents and snakes. They also dramatically increase the fire load, exposing the cemetery to a greater fire threat. Materials that cannot be mulched must be removed from the cemetery for disposal elsewhere as soon as possible.

We recommend also that the clearing of the cemetery extend about 30-50 feet beyond the cemetery boundaries. This creates a clear zone

Fixtures and Furnishings

Cemetery 3 exhibits no cemetery buildings, cemetery fences, plot fixtures, or other amenities. All features associated with the burial ground have disappeared and today nothing remains.

Originally there was a fence surrounding the cemetery. Remnants of this fence reveal that it was 36 inch woven wire, probably topped by two or three strands of barbed wire – a fairly typical farm or pasture fence. A large section of the fence was found at the southern end of the property during recent clearing.

We recommend that a woven wire fence be erected around the cemetery. This will help to clearly identify the boundaries and clearly mark the property. Woven wire is less costly than chain link, less expensive to repair when damaged, and will serve to retain the historic appearance of the property. If the hospital is concerned about maintenance issues, the fence quality can be improved by increasing the weight of the fencing. We anticipate that the cost of the fencing will be about \$8,000 (this cost can be reduced if the fence is erected in-house, perhaps by a work crew from

Figure 52. Example of a large poison ivy vine already growing up and choking out a tree.

where a fire line can be periodically plowed to reduce the threat of a fire in the cemetery. It also creates a clear zone to help reduce damage to the cemetery fence.

Since we do not recommend re-establishing the roads in the cemetery (for fear of impacting undefined burials), the cleared area around the cemetery will permit maintenance vehicles ready access. The original roads through the cemetery may, however, be fully cleared to give an idea of the original organization.

There are areas of poison ivy in the cemetery and management of these areas should begin during this initial clearing phase. There are three reasons to eliminate the poison ivy in the cemetery. The most obvious, of course, is related to its hazard to people. About 85% of people are

allergic to the urushiol in poison ivy and only 1 billionth of a gram is required to cause a rash in many people. The presence of the poison ivy will dissuade many from visiting the cemetery. Beyond this, the poison ivy creates a continuing maintenance problem, necessitating more brush trimming than would otherwise be necessary. The third reason is that the poison ivy will eventually begin to vine and grow up the trees, creating additional maintenance problems (some vines are present already). Without control the poison ivy will eventually shade out its host tree, killing it. Thus, there are ample reasons to bring this problem under immediate control.

Poison ivy is difficult to control since it is spread both by underground rhizomes and by seeds. The seeds are spread quickly by birds and other animals that eat the fruits.

The plant can be controlled by constantly cutting it back, eventually starving the plant. This, however, is a rather long process. Often herbicides are not recommended since they can damage stones. There are relatively few commercial monuments in the cemetery and we believe the benefits of herbicide use outweigh the risks. Moreover, the risk can be minimized by careful application and avoiding prolonged use.

A variety of herbicides can be used, including those containing glyphosate, 2,4-D amine, and triclopyr. Technical fact sheets for each are available at <http://npic.orst.edu/npicfact.htm>. All of these herbicides are translocated from the leaves and cut stems to the rest of the plant, eventually killing shoots and roots, although repeated applications are generally necessary. Many of the herbicides will affect trees, such as oaks and hickories, so it is important to be careful in the use of the herbicides, prevent drift, and limit the amounts used. All require use during active growing seasons.

Recently good results have been reported using triclopyr. This product is widely available to consumers as Bayer Brush Killer Plus ([http://www.bayeradvanced.com/system/product_variants/label_pdfs/000/000/071/original Brush_Killer_Plus_32oz_CON.pdf](http://www.bayeradvanced.com/system/product_variants/label_pdfs/000/000/071/original_Brush_Killer_Plus_32oz_CON.pdf)) or to the

agricultural industry as Dow's Garlon 4 (<http://www.cdms.net/ldat/ld0B0013.pdf>). The former contains only 8.8% of the active ingredient, while the later is 61.6% triclopyr. Of course Garlon 4 is far more expensive, but its higher concentration allows more effective use and better control.

Regardless, it is important the caregivers follow the label instructions. In particular it is critical that triclopyr be applied as a coarse spray

Since triclopyr can damage both oaks and hickories it is also important that the herbicide not be sprayed on the trunks of these trees. An effort should also be made to avoid spraying any of the stones.

For situations where poison ivy is already growing into trees we recommend that the vine be cut as low to the ground as possible. The freshly exposed cut vine extending into the soil should be painted with undiluted Garlon 4 in order to kill the

roots and minimize the potential for it to resprout. This same approach can be used on small trees that are being taken out but have the potential to sucker.

A final task with the completion of clearing and other tasks outlined here is the infilling of sunken graves. The long use of the burial ground without vaults, coupled with the wet soils, has created a topography that collects water, presents significant hazards to the public, and has resulted in excessive displacement of stones. The uneven

topography also makes maintenance more difficult.

The depressions provide clear evidence of graves; we believe, however, that these graves are adequately documented on the available maps. It is therefore possible to bring in sand and backfill these grave depressions.

The process of backfilling graves must be conducted by hand in order to avoid damage to the landscape. Clean sand should be deposited in grave depressions using mini track loaders or muck trucks (powered wheelbarrows). Graves should be filled to within 4-inches of grade, leaving a slight depression. This depression with the clean sand fill will allow graves to be easily

Figure 53. Sunken grave at Cemetery 3.

on windless days. It works best when the poison ivy is actively growing. It is also useful to use an agricultural surfactant (typically non-ionic such as Competitor or silicone based such as Sylgard 309; of the two we recommend the non-ionic surfactant because of its lower toxicity to animals and insects) to improve the wetting of the foliage (poison ivy has waxy leaves that tend to shed water). Garlon 4 also offers the opportunity to mix the herbicide with oils, in which case a surfactant is not necessary. Since oils will cause considerable staining of monuments, we strongly recommend avoiding this approach and mixing the herbicide with water and an appropriate surfactant. A tracker dye (such as Blazon Blue Dye) can be added to ensure that you achieve good coverage, but it is important to avoid spraying monuments since this tracker dye may also stain the stones.

Table 5. Maintenance Plan for Cemetery 3		
Frequency	Activity	Time Required
Monthly	Check cemetery for maintenance problems (erosion, downed trees, and other issues). Respond as appropriate.	1 hour (1 person)
Twice-Yearly	Inspect trees for signs of disease, damage. Respond as appropriate	4 hours (1 arborist)
Monthly	Check road condition; check culverts under road. Respond as appropriate.	1 hour (1 person)
Bi-Monthly	Place additional mulch as necessary.	2 hours (crew of 6)
Quarterly	Remove understory vegetation using brushcutter/clearing saw and Garlon 4 as necessary.	16 hours (crew of 6)

recovered in the future should that be necessary.

On-Going Maintenance

Once the recommended landscape modifications are made (removal of trees, elimination of the understory, application of mulch, removal of downed wood, erection of a fence, and creation of a fire line around the cemetery), there will continue to be maintenance needs. These will, however, be significantly less labor intensive than what the cemetery caregivers face now.

Table 5 outlines the maintenance tasks anticipated at the cemetery, as well as the time that will be required for each.

Other Maintenance

Signage

The existing signage consists of hand-made metal signs apparently erected by a local historian, Grady Turnage. He kept alive the memory of this cemetery and there is no question that the signage helped. It is not, however, adequate today and should be replaced.

From a cemetery preservation perspective, signage is of four basic types: identification, regulatory, informational, and interpretative. They are generally recommended in this same priority.

Identification signage might include the name of the cemetery and might also include the cemetery's date of founding and historic significance (i.e., eligible for listing on the National Register).

We recommend identification signage at the entrance to the physical cemetery. We do not recommend any identification signage at the entrance off U.S. 90 since this may attract too much attention to a cemetery that is remote and difficult to patrol.

The signage should be simple and dignified. If the hospital has a standardized system, the signage at Cemetery 3 should conform. Appropriate verbiage might be:

<p>Florida State Hospital Cemetery 3 Operated from ca. 1876 to ca. 1927</p>

Regulatory signage specifies laws, regulations, or expected standards of behavior. We recommend that the hospital develop signage dealing with, minimally, these issues (perhaps with some modifications of language as might be needed):

- The cemetery is open upon request to the Florida State Hospital, Office of Administrative Services. Any individual in the cemetery at other times is subject to arrest for trespass.

Figure 54. Existing signage at Cemetery 3. The top photo shows the current identification sign. The bottom photo shows the current interpretative signage.

- Many of the monuments and headboards in this cemetery are very old and may be easily damaged. Please refrain from leaning, sitting, or climbing on or handling any monument. All children must be escorted by an adult.
- Absolutely no alcoholic beverages, fireworks, or fire arms are allowed in the cemetery. Proper conduct is expected at all times.
- No pets are allowed in the cemetery.

- Flowers will be removed by the staff 10 days after holidays or when the arrangements become wilted and unsightly. No artificial flowers or plants are permitted.

- No plantings are allowed within the cemetery and the Florida State Hospital will enforce its right to remove any plantings deemed inappropriate, diseased, or damaging the cemetery.

- For additional information concerning maintenance issues, please contact the Florida State Hospital, Office of Administrative Services at _____. In case of emergency contact _____.

The last two types of signage are informational (for example, directional signs) and interpretative (information on historic people buried in the cemetery).

At the present time there is a small interpretative sign, also placed by Turnage, at the graves of the two Army officers who died building the U.S. Arsenal. This sign is placed on the rear of the tree at the two graves and is probably often not seen.

The hospital should evaluate whether it is appropriate to commemorate these graves to the exclusion of the several thousand of patient graves at the cemetery. Every individual's life has worth and value and to specifically single out these two individuals may send the wrong message.

Other Public Outreach

It appears that there is a disconnect between the information available from the State Archives and what is still at the Florida State Hospital. For example, in 1992 an individual wrote the hospital requesting information on the commitment of a sister of their grandfather in the

late 1890s or early 1900s. The hospital responded that they were “unable to provide this information, since we are required by the Florida Department of State, Office of Record Management, to destroy medical records seven (7) years past discharge or death.” In fact, these records are housed at the State Archives as Record Ground 841, S-1062, Commitment Records, 1893-1973.

In another instance an individual visited the hospital, seeking to visit a family member’s grave and was told that “this particular cemetery is an inactive one and no one can get to it because the forest had ‘reclaimed’ the area.” This certainly was an unfortunate way to handle this legitimate public request.

There is also no information available concerning this cemetery – or any of the hospital cemeteries – on the Florida State Hospital website.

Genealogical message boards are filled with less than favorable accounts of being unable to gain information on descendants through official hospital channels. Certainly at least part of the problem is that the hospital did not have the necessary information readily available – and this report will largely resolve that issue.

We recommend that the report be made publically available on the hospital’s web site. In particular the maps and excel spreadsheets that provide information on those buried in Cemeteries 2, 3, and 4 should be made easily available. This will go a long way to addressing the types of questions that families legitimately have concerning their loved ones.

Trash

Trash is not currently a problem at Cemetery 3. The locked gate is likely responsible for preventing a great deal of illegal dumping. We encourage the hospital to remain aware of the threat and take immediate action if a problem is noted.

Otherwise, visitation is anticipated to be so light that there is no need for trash receptacles.

Conservation Issues

As previously mentioned, both commercial marble markers and institutional wooden headboards are still present at Cemetery 3. The nine commercial monuments are illustrated in Figures 55 and 56.

The two military officers were buried in brick box tombs that have cement stucco adhered to the exterior. The Pettigru tomb is topped by a marble ledger carved by Charleston stone carver John White. Since Pettigru was from South Carolina this suggests that the ledger was paid for by his family. Today the ledger is broken into five fragments. The box tomb of John Hills is similar, except that it was topped with a concrete ledger, which was probably standard military practice absent family intervention. Both boxes have been displaced and damaged over the years by a large tree growing between them.

The grave of Sarah A. Straughn was also marked using a marble ledger. In this case, the grave itself is a below grade brick vault. The ledger has been displaced, suggesting an effort to rob the grave and documenting previous vandalism at the site.

Four of the monuments are marble die on bases. Two, perhaps pinned, are still standing, the other two have been toppled. One is a marble pillow style marker and the final specimen is a marble headstone, which is today broken.

In addition to these commercial markers (or in the case of Hills, a locally made ledger), there are at least two examples of brick vaults – one previously mentioned for Straughn and another for an infant. The infant’s grave lacks any obvious cover, although one was likely present.

There is at least one additional marker that was reported from the cemetery in the 1980s – a marble marker for William T. Veatch (March 22, 1857 – July 2, 1920). This marker was not identified during the current survey, but may still be present.

Figure 55. Commercial markers in Cemetery 3. Top row: Carrie Bellamy (d.1922), Charles Pettigru (d. 1835); bottom row: Jessie C. Blanton (d. 1891), Maudie Grant (d. 1919).

Figure 57. Examples of the wooden headboards in Cemetery 3.

Far more numerous than the markers purchased by families are those provided by the hospital – wooden headboards. There appear to be two styles. Most numerous, found throughout the cemetery, are plain pine headboards measuring about an inch in thickness, about a foot in width, and perhaps 2-3 feet in length, with about 1 to 1.5 feet above grade. These typically had the corners cut off to present a “rounded”

appearance.

The second type of headboard, which survives (or was present) on only a few graves today appears to have originally been a wooden cross, although the cross arm is missing. The top is more clearly rounded and the wood is about 1½ inches in thickness.

Figure 58. Examples of numbering tags for headboards. The top row shows two stamped lead numbers, both with nail holes on the middle of each side. The bottom row shows thin metal plates that were perhaps painted. These were attached with a one or two nails on the upper edge.

The headboards, at least in the white “divisions,” had small plaques attached with a number that correlated to the individual buried in that plot. At least initially, these numbers were stamped on lead plates measuring about 2-5/8 inches by 2 inches. These were attached to the headboards using two brass brads, one on each side of the plate. While the plates have fallen or been stripped from the headboards, the nails still remain in many.

At some point the hospital switched to the use of thin metal plates. These exhibit considerable variation in size suggesting they may have been scrap from some other activity in one of the industrial plants on the grounds. There is no evidence of a stamped or embossed number, suggesting the plates were painted. They were attached to the headboards using a single box nail in the upper center of the plate.

All of these tags have fallen or been stripped from the headboards. Many may still be found buried in the soil, although they are often no longer directly associated with a grave. The lead tags have been chewed on by rodents, while the ferrous tags exhibit heavy corrosion.

Treatment

The monuments at Cemetery 3 are critical elements of the landscape that require preservation. Many of the stone monuments require conservation treatment.

For example, the two military graves require stabilization of the box tombs, as well as the repair of the Pettigru ledger. The toppled die on base markers require pins to be set and the stones reset. The broken headstone should be repaired using blind pinning and reset.

These are all common stone conservation treatments and the hospital should allocate approximately \$13,000 for their repair.

Of equal concern are the wood headboards. Unfortunately, their treatment is not nearly as simple and straight-forward as that prescribed for the marble monuments. Efforts in the past to retard deterioration of cemetery wood using various surface treatments, penetrating oils, and encasements have all failed.

Approaches that can extend the life of wood artifacts such as these headboards include efforts to control water and vegetation. By improving the micro-environment in the vicinity of the markers some deterioration can be forestalled (Anthony & Associates 2009).

These efforts include controlling organic debris and vegetation immediately around and on the headboards. Current efforts to remove vegetation will open the cemetery to additional sunlight and help dry both the soil and the wood headboards. This will help reduce biologicals.

Another step that should be implemented is to very carefully excavate all of the remaining wood headboards and replace the mucky soils with quick-draining pea gravel. This will help prevent water from ponding around the headboards and promote drying.

For those headboards still in relatively good condition another approach is the installation of borate rods by drilling holes on the bottom or below-grade lateral face of markers, inserting the rods, and filling the resulting hole with a threaded plastic plug. This can be done in the process of excavating the headboards and resetting them in pea gravel.

The use of borate rods, however, must be part of an on-going maintenance program since the rods have a lifespan of 3 to 10 years depending on environmental conditions.

In some cases it was clear that the below grade portion of the marker had almost nearly decayed, although the above grade portion was

still in relatively good condition. In such cases we recommend the repair of the marker by removing the damaged portion and attaching a new below grade piece to support the headboard. The repair should not impair the aesthetic effect of the marker, although the below grade repair may be treated wood suitable for burial.

If at some point it becomes appropriate to replace markers too damaged for treatment, it is critical that headboards are replaced “in-kind.” This means that the wood utilized should be reclaimed material of the same species that matches as closely as possible the original wood’s density and type of cut. Dimensions and detailing should match the original dimensions and the profile and should not be altered. The “new” headboards should not appear new.

While these recommendations may seem cumbersome, it is important to observe that this cemetery – and the headboards remaining – are a unique historic site and deserve the efforts to ensure the property’s long-term preservation. These actions are no more cumbersome than any maintenance regime for a historic structure.

We estimate that the cost of the initial treatment of the headboards is approximately \$15,000, with an additional \$5,000 allocated every 5 years for regular maintenance.

Recommendations

Significance

We have previously recommended that Cemetery 1 is eligible for inclusion on the National Register of Historic Places under Criteria D, information potential. We have pointed out how this cemetery can make significant bioanthropological contributions to our understanding of diet, disease, and associated osteological questions. In the case of Cemetery 3 it would be easy to associate skeletal remains with surviving medical records to provide data on the patient during life as well as the reported cause of death. In addition, the burials have the potential to address mortuary questions associated with an institutional setting. In some cases we have data

from families, directing that the burials take place in a particular fashion or using specific burial items.

In addition, Cemetery 3 is also recommended eligible under Criterion C, that the cemetery embodies the distinctive characteristics of a particular type – that of the institutional burial typified by hospitals and prisons. This criterion specifically notes that these characteristics may lack individual distinction, but nevertheless represent a significant and distinguishable entity when taken together.

Moreover, the cemetery meets Criteria Consideration D since it derives its primary importance from these design features as well as its association with the historic events associated with the development of mental illness treatment at the Florida State Hospital.

Legal Protection

We have previously outlined the provisions of Florida Statutes 872.02 and 872.05, which clearly apply to this cemetery.

Recommended Activities

The clearing of the cemetery has already begun using inmates from the River Junction facility. They are doing an excellent job, exercising great care to prevent damage. At the time of our visit great progress had been made.

We recommend that the clearing be completed. This work should include special efforts to eliminate poison ivy, as well as mulching the dead wood to establish a good ground cover across the cemetery. Vegetation should be cleared for 30-50 feet beyond the cemetery margin to provide an area for

maintenance vehicles, as well as a fire lane.

With the completion of the vegetation removal, the next critical activity should be the infilling of graves. Clean sand should be placed in the sunken graves, filling them to about 4-inches lower than the surrounding grade.

The next most critical activities include the creation of an all-weather gravel road into the cemetery, in conjunction with an appropriate parking and turn around area. The entrance to the cemetery should have a more substantial gate erected.

A fence should be erected around the cemetery, providing a clear visual barrier.

The hospital's security department should place the cemetery on its routine security patrols.

The cemetery should have both identification and regulatory signage at its entrance. At U.S. 90, however, we recommend only that signage indicate that the property is posted and that trespassers will be prosecuted.

The information generated by this study, especially the maps and Excel list of individuals buried in the cemetery, should be made available

Table 6.
Projected Budget for Cemetery 3

Activity	Estimated Cost	Notes
Priority 1		
Clear and mulch cemetery	-	River Junction crew
Fill grave depressions	500.00	sand only; River Junction crew
Build road to cemetery	4,000.00	
Build turn around and parking area	1,500.00	
Install better gate	500.00	materials only; River Junction crew
Identification signage	500.00	
Regulatory signage	1,000.00	
	\$8,000.00	
Priority 2		
Place information on hospital website	-	
Install fence around cemetery	8,000.00	
Conservation treatments to monuments	13,000.00	AIC Conservator
Conservation treatments to headboards	15,000.00	AIC Conservator
	\$36,000.00	
Priority 3		
On-going maintenance of ground/road	2,000.00	yearly
On-going maintenance of monuments	500.00	yearly
	\$2,500.00	
Estimated Total Budget	\$46,500.00	

to the public by incorporation into the Florida State Hospital website.

Conservation treatments of the commercial monuments as well as the original hospital headboards should be conducted as soon as possible.

Finally, the hospital should recognize the need for on-going maintenance at the site.

Table 6 outlines these recommendations and the anticipated costs.

Assessment of Cemetery 4

Cemetery 4 (8GD1002) is situated about 1,100 feet southwest of Cemetery 3 on a hill top about 500 feet southeast of an abandoned railroad easement. It is situated on parcel 1-34-4N-6W-0000-00100-0100 (see Figures 2 and 5), which is leased by TIITF to the Department of Corrections. That agency has turned management of the property over to Prison Rehabilitative Industries and Diversified Enterprises, Inc. (PRIDE), a nonprofit corporation authorized by the Florida Legislature in 1981 to operate the state prison industries. They do not appear to be actively using the property, so the purpose of the lease is unclear.

Figure 59. Cemetery 4 looking to the south. The flags mark individual rows of graves.

Cemetery 4 began being used by the Florida State Hospital about 1926 as Cemetery 3 was filled. Unlike Cemeteries 2 and 3, no map exists for burials in this cemetery, although aerial photographs suggest at least four divisions were

likely present – with male and female, as well as black and white burials continuing to be segregated (Figure 33). A map has been created based on this assessment and burials in the cemetery have been assembled based on information available from the various journals prepared by the hospital undertaker (Appendix 1 and 2).

Although burials ceased in Cemetery 4 about 1931, the property was still relatively well maintained in 1947. By 1955 maintenance appears to have ceased and the area was being retaken by woods. While Cemetery 3, perhaps because of the maps, remained in the memory of many historians and personnel at the Florida State Hospital, Cemetery 4 was quickly forgotten.

There is evidence that the graves in this cemetery were once marked using wood headboards, although none remain today. It is reported by Grady Turnage (personal communication 2011) that an African American minister reported these headboards were removed for kindling. Given the African American cultural attitudes regarding death and burial grounds, this seems highly unlikely. Nevertheless, no headboards remain today on the relatively well drained soils. Two commercial stones are

reported, although only one was identified during this study. We have also documented that several families had their loved ones removed from this cemetery for burial in Cemetery 5 in order to provide better access.

Even with no headboards, sunken graves are visible throughout the cemetery, making the identification of rows and boundaries very easy.

Road and Pedestrian Issues

Vehicular Access and Circulation

The original access to Cemetery 4 is unclear. The available aerial photographs show roads across the open fields, as well as parallel the railroad tracks. It is not possible, however, to determine which are associated with Cemetery 4.

The railroad easement has been abandoned and is available for road access, but there are several very large mud areas that require repair (Figure 60). There are also several large trees that block access. In addition, the corridor does not provide any turn around. Once arriving at the transmission line easement that crosses the southern edge of the cemetery, there is a very steep bank that prevents vehicle access (Figure 60).

As a result, the only means of access Cemetery 4 today is to walk 0.5 mile to the cemetery. This severely limits public access and makes the required maintenance efforts very difficult.

Consequently, we recommend that the Florida State Hospital develop an agreement allowing the use of the railroad easement for access and then maintain that route by filling in rutted areas and clearing vegetation to allow vehicular traffic for about 0.4 mile. About 330 feet north of where the spur to the hospital joins the main line, a new road should be constructed to the south for a distance of about 750 feet to provide access to the cemetery.

This new road, like that recommended for Cemetery 3, can be an unpaved, but permanent,

graveled road. The soils here are Cowarts-Nankin complex. These are moderately well drained soils and they should support road construction with few limitations. The anticipated cost of this road is about \$1,650. As with the road for Cemetery 3, there should be a parking and turn around area about 12 by 24 feet outside the cemetery.

Although the cemetery originally contained at least one bisecting road, we see no need to replicate this internal arrangement.

Pedestrian Access

Access in the cemetery is currently limited by the dense brush and numerous sunken graves. We recommend that the efforts to clear Cemetery 3 be extended to Cemetery 4. This would entail the removal and mulching of understory vegetation and downed trees.

With the cemetery open it will be possible to map and infill graves, improving the safety of the cemetery and allowing easier movement. We do not, however, envision the need to create any paths and recommend instead that the cemetery be maintained in a relatively rural or rustic condition.

Universal Access

There are few naturally limiting factors for ADA compliance or universal access at the cemetery. The topography is such that ramps are unnecessary. The major limiting factors would be the soft groundcover and the gravel road that would be impassible for wheelchairs.

While extensive modifications would be out of character, at the present level of use we are not convinced that there is a demand adequate to justify either the expense or the damage to the historic fabric.

In addition, the ADA or the Rehabilitation Act of 1973 is generally not interpreted to apply to cemeteries by the Department of Justice. Nevertheless, we are an aging population and it would be appropriate for the hospital to establish a protocol that would allow staff to assist wheelchair patrons or other disabled reach

Figure 60. Access issues for Cemetery 4. The top photo shows rutting and downed trees on the railroad easement. The bottom photo shows the steep slope from the railroad easement to the transmission line corridor. The cemetery is situated at top of the rise in the background, to the left (north) of the H-frame tower.

specific gravesites in the cemetery.

Some cemeteries have achieved this goal by training their staff in the correct means of assisting the disabled and by providing golf carts

to help ferry individuals to grave locations. This should be a long-term goal of the hospital for the cemetery.

Security Issues

The typical security issues faced by most cemeteries are vandalism and theft. Neither has been a significant threat at Cemetery 4 in the past since so few individuals knew of its existence.

Cemetery 4, however, is isolated and accessible from both the railroad and power line easements. This makes securing the cemetery more difficult.

If possible, the railroad easement should be gated at U.S. 90 on the north end and at Florida Route 269A on the south end. If it is not possible to gate the easement, a gate should be established at the road to be constructed off the railroad easement.

We also recommend that the hospital security detail place the cemetery on its periodic rounds. Given the isolation of the

cemetery we understand that it will be difficult to patrol the cemetery on a routine basis, but we do recommend that the property be visited at least every two months to ensure its security. Visitation

on a more regular basis would be beneficial.

Fixtures and Furnishings

Cemetery 4 exhibits no cemetery buildings, cemetery fences, plot fixtures, or other amenities. All features associated with the burial ground have disappeared and today nothing remains to suggest a cemetery is present except for the sunken depressions and two commercial markers.

Cemeteries 2 and 3 were both fenced, so while we have no specific evidence of a fence at Cemetery 4, it seems likely that a woven wire fence was present at one time.

We recommend that a woven wire fence be erected around Cemetery 4. This will help to clearly identify the boundaries and clearly mark the property. Woven wire is less costly than chain link, less expensive to repair when damaged, and will serve to retain the historic appearance of the property. If the hospital is concerned about maintenance issues, the fence quality can be improved by increasing the weight of the fencing. We anticipate that the cost of the fencing will be about \$4,100 (this cost can be reduced if the fence is erected in-house, perhaps by a work crew from River Junction).

Landscape Maintenance

Initial Clearing

We recommend that once Cemetery 3 has been cleared by work crews from River Junction, those crews be transferred to Cemetery 4 to complete similar work. Specifically all trees 4-inches dbh or less should be removed, as well as all brambles and other understory vegetation. There are also numerous downed trees that should be removed.

All removed trees should be cut as low to the ground as possible in order to minimize trip hazards. A trimmer/brush cutter (such as the Stihl FS 550 Brushcutter/Clearing Saw) is a good choice for such work.

The goal is to produce a generally clean and easily walked cemetery. Care is to be taken to avoid intentional plantings, although none were observed during this assessment.

We recommend that as much of the removed vegetation as possible be chipped on-site and distributed over the cemetery in order to help reduce future understory vegetation.

It is very important to prevent accumulations of dead wood at the periphery of the cemetery. Such piles would provide harborage for rodents and snakes. They also dramatically increase the fire load, exposing the cemetery to greater fire threat. Materials that cannot be mulched must be removed from the cemetery for disposal elsewhere.

We recommend also that the clearing of the cemetery extend about 20 feet beyond the cemetery boundaries. This is sufficient to minimize damage to the fence, but less than recommended for Cemetery 3 since there are no headboards in Cemetery 4 that require protection from forest fires.

Since we do not recommend re-establishing the roads in the cemetery (for fear of impacting undefined burials), the 20 foot cleared area around the cemetery will permit maintenance vehicles adequate access. The original roads through the cemetery may, however, be fully cleared to give an idea of the original organization.

A final task with the completion of clearing is the infilling of sunken graves. The long use of the burial ground without vaults has resulted in virtually all of the graves sinking in the cemetery. This uneven topography will make long-term maintenance more difficult and poses a significant hazard to site visitors.

Infilling of the graves, however, should not be conducted until the plan made during this assessment is verified and corrected as necessary. These depressions provide clear evidence of where burials were located and it is critical that this information be maintained.

Table 7. Maintenance Plan for Cemetery 4		
Frequency	Activity	Time Required
Bi-Monthly	Check cemetery for maintenance problems (erosion, downed trees, and other issues). Respond as appropriate.	1 hour (1 person)
Twice-Yearly	Inspect trees for signs of disease, damage. Respond as appropriate	2 hours (1 arborist)
Bi-Monthly	Check road condition. Respond as appropriate.	1 hour (1 person)
Bi-Monthly	Place additional mulch as necessary.	2 hours (crew of 6)
Quarterly	Remove understory vegetation using brushcutter/clearing saw and Garlon 4 as necessary.	8 hours (crew of 6)

The process of backfilling graves must be conducted by hand in order to avoid damage to the landscape. Clean sand should be deposited in grave depressions using mini track loaders or muck trucks (powered wheelbarrows). Graves should be filled to within 4-inches of grade, leaving a slight depression. This depression with the clean sand fill will allow graves to be easily recovered in the future should that be necessary.

On-Going Maintenance

Once the recommended landscape modifications are made (removal of trees, elimination of the understory, application of mulch, removal of downed wood, erection of a fence, and creation of a fire line around the cemetery), there will continue to be maintenance needs. They will, however, be significantly less labor intensive than what the cemetery caregivers face now.

Table 7 outlines the maintenance tasks anticipated at the cemetery, as well as the time that will be required for each.

Other Maintenance

Signage

Cemetery 4 contains no signage.

From a cemetery preservation perspective, signage is of four basic types: identification, regulatory, informational, and interpretative. They are generally recommended

in this same priority.

Identification signage might include the name of the cemetery and might also include the cemetery's date of founding and historic significance (i.e., eligible for listing on the National Register).

We recommend identification signage at the entrance to the physical cemetery. We do not recommend any identification signage at the entrance off U.S. 90 since this may attract too much attention to a cemetery that is remote and difficult to patrol.

The signage should be simple and dignified. If the hospital has a standardized system, the signage at Cemetery 3 should conform. Appropriate verbiage might be:

<p>Florida State Hospital Cemetery 4 Operated from ca. 1926 to ca. 1931</p>

Regulatory signage specifies laws, regulations, or expected standards of behavior. We recommend that the hospital develop signage dealing with, minimally, these issues (perhaps with some modifications of language as might be needed):

- The cemetery is open upon request to the Florida State Hospital, Office of Administrative Services. Any individual in the cemetery at other times is subject to

arrest for trespass.

- Monuments in this cemetery are very old and may be easily damaged. Please refrain from leaning, sitting, or climbing on or handling any monument. All children must be escorted by an adult.
- Absolutely no alcoholic beverages, fireworks, or fire arms are allowed in the cemetery. Proper conduct is expected at all times.
- No pets are allowed in the cemetery.
- Flowers will be removed by the staff 10 days after holidays or when the arrangements become wilted and unsightly. No artificial flowers or plants are permitted.
- No plantings are allowed within the cemetery and the Florida State Hospital will enforce its right to remove any plantings deemed inappropriate, diseased, or damaging the cemetery.
- For additional information concerning maintenance issues, please contact the Florida State Hospital, Office of Administrative Services at _____. In case of emergency contact _____.

This signage should be erected at the entrance to the fence of Cemetery 4. The fence should have no trespassing signs attached on each side to clearly mark the property.

The last two types of signage are informational (for example, directional signs) and interpretative (information on historic people buried in the cemetery). Neither type of signage is necessary at this time.

Other Public Outreach

We have previously explained that the Florida State Hospital needs to do a better job of providing information to the public, including family members of those who died at the hospital.

There is no information available concerning this cemetery – or any of the hospital cemeteries – on the Florida State Hospital website and genealogical message boards contain complaints about the difficulty in obtaining information.

We again recommend that the report be made publically available on the hospital's web site. In particular the maps and excel spreadsheets that provide information on those buried in Cemeteries 2, 3, and 4 should be made easily available. This will go a long way to addressing the types of questions that families legitimately have concerning their loved ones.

Trash

Trash is not currently a problem at Cemetery 4. The remote location and poor access certainly contribute to the site's protection. We encourage the hospital to remain aware of the threat of illegal dumping and take immediate action if a problem is noted.

Otherwise, visitation is anticipated to be so light that there is no need for trash receptacles.

The Cemetery Within the Power Line Easement

The GPR study confirmed the observation based on the historic aerials, that the southern portion of the cemetery was lost to the Progress Energy of Florida easement. There are between 40 and 80 graves within the easement. During the construction of this easement, about 2 feet of soil was cut from the cemetery; the GPR study suggests that the burials, while still present, are shallower because of this loss of overlying soil.

The ideal solution would be for the power line easement to be shifted southward about 50 feet, removing it entirely from the cemetery. This would be the most respective solution and it would be the safest, considering how shallow the burials are and how easily they could be impacted by routine maintenance, especially if it were to take place during wet weather (such as during recovery after a hurricane). Nevertheless, such a solution would be expensive.

Figure 61. Southern portion of Cemetery 4 in the Progress Energy of Florida easement. The centers of graves are marked with red flags. View is to the west, toward the railroad easement.

Perhaps a suitable compromise would be for the utility to mark the cemetery on its plans and indicate on maintenance documents that no vehicular traffic (tracked or rubber tire) is permitted on the cemetery. All repair and/or maintenance work would be required to avoid the cemetery – including any emergency power restoration efforts.

One or the other of these solutions should be officially advanced by the Department of Children and Families to Progress Energy of Florida immediately.

Conservation Issues

As previously mentioned there are two commercial markers reported from this site. One, that of Arione Sowell (February 14, 1858 – October 26, 1930), was not identified during this study. However, a second stone, not previously reported, was found. This stone is that of Louvella Lane (September 8, 1880 – September 12, 1927). The Lane stone is a marble tab in socket, with the die displaced and leaning against a tree.

It is also reported that there were headboards at one time, although none exist today. This seems likely since a metal detector survey of the cemetery identified several metal plates similar to those found in Cemetery 3.

Treatment

The two monuments at Cemetery 4 are a very minor component of the cemetery landscape. Nevertheless, they represent significant historic artifacts that require maintenance. In addition, it is an issue of

respect for the deceased that the stones receive some minimal maintenance.

Resetting of the two toppled stones at the cemetery (assuming the Sowell monument can be identified) is a fairly simple conservation task. The hospital should allocate approximately \$2,000 for their repair.

Recommendations

Significance

We have previously recommended that Cemetery 1 is eligible for inclusion on the National Register of Historic Places under Criteria D, information potential. We have pointed out how this cemetery can make significant bioanthropological contributions to our understanding of diet, disease, and associated osteological questions. Cemetery 3 has been recommended eligible not only under Criterion D, but also under Criterion C, distinctive characteristics.

Cemetery 4, lacking standing headboards

Figure 62. Marble headstone for Louvella Lane at Cemetery 4.

and with only two commercial markers is likely not eligible under Criterion C. It almost certainly, however, meets the requirements of Criterion D, information potential. It appears that the cemetery continued the mortuary pattern found at Cemeteries 2 and 3 and therefore it assumes greater importance because it is one of a series of cemeteries that could provide extraordinary bioanthropological research data on both Euro-American and African American patients. There is the potential, even lacking marked graves, to associate specific individuals with many of the graves, allowing medical records to be matched to osteological data.

Legal Protection

We have previously outlined the provisions of Florida Statutes 872.02 and 872.05, which clearly apply to this cemetery.

Recommended Activities

The clearing of the cemetery can be accomplished using inmates from the River Junction facility. At the time of this assessment they had already begun the clearing of Cemetery 3 and were doing an excellent job.

We recommend that the workers mulch the dead wood to establish a good ground cover across the cemetery. Vegetation should be cleared for 20 feet beyond the cemetery margin to provide an area for maintenance vehicles and provide some protection for the fencing (discussed below).

With the completion of the vegetation removal, the next critical activity should be the infilling of graves. Clean sand should be placed in the sunken graves, filling them to about 4-inches lower than the surrounding grade.

The next most critical activities include the creation of an all-weather gravel road into the cemetery, in conjunction with an appropriate parking and turn around area. The entrance to the cemetery – preferably off U.S. 90 and Florida Route 269A at the railroad easement – should have substantial gates erected.

A fence should be erected around the cemetery, providing a clear visual barrier.

The Department of Children and Families should contact Progress Energy of Florida and either require that the easement be shifted off the cemetery or require that no equipment operate within the boundaries of the cemetery.

The hospital's security department should place the cemetery on its routine security patrols.

The cemetery should have both identification and regulatory signage at its entrance. At public road entrances, however, we recommend only that signage indicate that the property is posted and that trespassers will be prosecuted.

The information generated by this study, especially the maps and Excel list of individuals

Table 8.
Projected Budget for Cemetery 4

Activity	Estimated Cost	Notes
Priority 1		
Clear and mulch cemetery	-	River Junction crew
Fill grave depressions	300.00	sand only; River Junction crew
Build road to cemetery	1,650.00	
Build turn around and parking area	1,500.00	
Install gates at two entrances	1,000.00	materials only; River Junction crew
Identification signage	500.00	
Regulatory signage	1,000.00	
Contact Florida Power and ensure protection	-	
	\$5,950.00	
Priority 2		
Place information on hospital website	-	
Install fence around cemetery	4,100.00	
Conservation treatments to monuments	2,000.00	AIC Conservator
	\$6,100.00	
Priority 3		
On-going maintenance of ground/road	2,000.00	yearly
	\$2,000.00	
Estimated Total Budget	\$14,050.00	

buried in the cemetery, should be made available to the public by incorporation into the Florida State Hospital website.

Conservation treatments of the commercial monuments should be conducted as soon as possible.

Finally, the hospital should recognize the need for on-going maintenance at the site.

Table 8 outlines these recommendations and the anticipated costs.

Assessment of Cemetery 5

Cemetery 5 (8GD1003) is situated about a mile southeast of Cemetery 3 and 1.25 mile east of the intersection of U.S. 90 and Florida Route 269A. The cemetery is on a south facing ridge locally called Goat Hill. It is situated on parcel 2-02-3N-6W-0000-00220-0000 (see Figures 2 and 6), which is incorrectly listed by the local tax assessor as being owned by the Department of Corrections. It is actually owned by THITF and leased to DCF. Although the property was originally acquired by the Florida State Hospital in 1921, the deed actually conveys the property to the State of Florida.

The road to the cemetery, however, is situated on parcel, 1-35-4N-6W-0000-00500-0000, owned by the Department of Corrections.

Cemetery 5 began being used by the Florida State Hospital about 1931 as Cemetery 4 was filled. A rudimentary map of the cemetery exists, consisting of a series of laminated rolls with each roll representing one north-south line of burials in the cemetery. As with other cemeteries operated by the hospital, these were also initially segregated by sex and race. Burials continue in this cemetery today, albeit at a much reduced pace than previously.

Graves in this cemetery were the first to be “permanently” marked using cast concrete with a stamped aluminum plate bearing a burial number. More recently, as these began deteriorating, the hospital has begun to shift to granite markers with carved

numbers. Burial vaults were introduced in 1976 in order to minimize maintenance issues. The hospital issued monuments are all lawn markers (the term applied to flush-to-ground markers). Those monuments placed by family members, with only one exception, have also been laid flat to facilitate easy maintenance.

Figure 63. Cemetery 5 showing rows of lawn markers.

Road and Pedestrian Issues

Vehicular Access and Circulation

Access to Cemetery 5 is a two-lane paved road that meanders southward from U.S. 90 to the cemetery. The road is in good condition and no improvements are necessary.

Figure 64. Road to Cemetery 5, looking south.

The cemetery road enters U.S. 90 at a relatively straight section; U.S. 90 curves about 850 feet to the west and 1500 feet to the east. U.S. 90 at this entrance is a 4-lane highway. The hospital should consider requesting that the Florida Department of Transportation erect a side road (W2-2) sign to the east and west of the cemetery road on U.S. 90. These signs are used in advance of an intersection to indicate the presence of the intersection and the possibility of turning or entering traffic. This would improve the

safety of this entrance.

Vehicular access is controlled by a locked gate. There is ample apron for one vehicle to get off the highway in order to unlock the gate. There is, however, no signage on the gate.

At the cemetery is a black metal gate fashioned from round stock and rebar supported by two brick columns in badly deteriorating condition. There is no parking area, but the paved road continues for about 20 feet into the cemetery before the paving terminates.

The road network in the cemetery consists of grassed roadways with worn tire tracks. The north-south bisecting road is worn and relatively well defined, flanked by crepe myrtles. Other roads are not as well defined. All, however, were in good condition at the time of our visit.

The cemetery, however, lacks convenient circulation. The north-south road terminates at an east-west road at the southern end of the cemetery. Most visitors would feel compelled to turn around off the road to exit the cemetery. The use of lawn markers makes it difficult to know where graves are located and where it is safe and appropriate to turn around.

Pedestrian Access

The cemetery is grassed and relatively easy to walk. There are no pathways, nor are pathways appropriate in this type of cemetery. With roads not well marked, most visitors would feel compelled to stay on the main bisecting road, park, and walk to their loved one's grave. For the elderly this could be a significant walk, especially since the precise location of a grave cannot be easily determined.

It would have been appropriate to include additional cross roads in the plan, ensuring that sections were more conveniently accessible. The current plan creates a monotonous uniformity that creates an exceptionally institutional appearance. While this is softened by the crepe myrtles, it still creates an arrangement difficult for many pedestrians to navigate.

Figure 65. Cemetery 5 entrance. Top photo shows the entrance off U.S. 90 (view is to the south). Bottom photo shows the entrance gate at the cemetery (view is to the north).

Universal Access

There are few naturally limiting factors for ADA compliance or universal access at the cemetery. The topography is such that ramps are unnecessary. The major limiting factors would be the soft turf and the grassed roads that would be impassible for wheelchairs.

While extensive modifications would be out of character, at the present level of use we are

not convinced that there is a demand adequate to justify either the expense.

In addition, the ADA or the Rehabilitation Act of 1973 is generally not interpreted to apply to cemeteries by the Department of Justice. Nevertheless, we are an aging population and it would be appropriate for the hospital to establish a protocol that would allow staff to assist wheelchair patrons or other disabled reach specific gravesites in the cemetery.

Some cemeteries have achieved this goal by training their staff in the correct means of assisting the disabled and by providing golf carts to help ferry individuals to grave locations. This should be a long-term goal of the hospital for the cemetery.

Should the cemetery ever be redesigned, it would be appropriate to pave the roads and create additional cross roads to bring graves into closer proximity of vehicles. This would reduce the effort of the elderly to visit graves.

Security Issues

The typical security issues faced by most cemeteries are vandalism and theft. Neither has been a significant threat at Cemetery 5 in the past. The cemetery is relatively well secured and there is little present at the cemetery to vandalize or steal. Cemetery 5, however, is isolated and appears to be infrequently visited. This certainly creates a situation where vandalism could be an issue.

We recommend that the hospital security detail place the cemetery on its periodic rounds. The cemetery should be visited at least weekly.

Figure 66. Main bisecting road through Cemetery 5, view to the southeast.

This structure should be removed by the hospital since it, also, gives the impression of a lack of care.

The cemetery has a fence, but it is in a state of decay that suggests the cemetery receives only the most minimal maintenance efforts.

The brick entrance pillars are in dilapidated condition. The brick is spalling and badly deteriorating. The OPC caps are shifted,

suggesting that at some time the columns have been hit.

Fixtures and Furnishings

Cemetery 5, as mentioned, exhibits a rather stark institutional landscape broken only by the crepe myrtles and other plantings focused on the main road.

The only cemetery “building” is a portable interment shed (or committal shelter) that is used rather than a tent during burials. This has been left in the cemetery over several graves, giving the appearance that the hospital could not be bothered to move it after the last burial. It should be consistently removed to the edge of the cemetery after burials.

In addition, there is a second, dilapidated portable building that appears to be abandoned at the edge of the cemetery.

Repair of these columns would likely be very costly. We recommend that the columns be replaced. They should, however, be replaced in kind, meaning that identical brick columns should

Figure 67. Current committal shelter has been left sitting in the cemetery over graves. It should be moved to the edge of the field after a burial.

Figure 68. Abandoned committal shelter at the edge of the cemetery. This dilapidated structure should be removed from the cemetery.

be constructed to support the iron entrance gates.

Beyond the columns for a short distance is chain link supported by farm fence posts and iron pipes, suggesting that it has been salvaged from elsewhere and erected here in a haphazard fashion. It is sagging in some sections and is being impacted by tree growth in at least one area. It evidences no effort at maintenance.

Surrounding the remainder of the cemetery there appears to be a woven wire fence, likely dating to the 1930s when the cemetery was first begun. This fence has been largely overtaken by forest and shows no evidence of maintenance.

We recommend that the entire fence surrounding this cemetery be replaced. Woven wire would be the most economical, especially since much of the work could be done by works crews from River Junction. The cost of a new fence would be approximately \$10,300.

Prior to the fence replacement, however, it is critical that the woods surrounding the cemetery be moved back at least 30-50 feet from the cemetery. Currently the woods are encroaching in several areas and at least a few graves are being lost to the woods. This work is

critical, since if it is not done portions of this cemetery will be reclaimed by the forest, just as has happened at Cemeteries 3 and 4. The hospital must make a long-term commitment to the preservation of these burial grounds.

No other amenities are associated with Cemetery 5.

Landscape Maintenance

Turf

The cemetery complex lacks a defined type of turf and appears instead to represent a variety of grasses. Much of the cemetery, however, is dominated by broad leaf “weeds” – undesirable species that cause the grounds to look unkempt and require frequent mowing to keep them in check.

Mowing in the cemetery is likely conducted with large deck riding mowers. Although the markers are flush to the ground, we observed considerable damage being done to the markers by mowing operations. This suggests a very minimal level of care. The hospital must ensure that the work is done not only with respect, but also care to prevent the need for replacement of damaged monuments.

Pest Control

Fire ants were observed throughout the cemetery and this is a significant issue. The hospital should be concerned not only because they cause additional maintenance expenses, but also because they represent a significant liability.

One survey done in 1998 concluded that 33,000 people in the state of South Carolina

Figure 69. Fence issues at Cemetery 5. The top two rows show the condition of the chain link fence at the north edge of the cemetery and the woven wire fence surrounding the bulk of the property. The bottom row shows the condition of the two entrance brick columns.

Figure 70. Turf problems include damage to markers, the presence of fire ants, and animal burrows. The photos also reveal the mixed weeds in the turf.

sought medical attention as a result of fire ant stings. Of those 15% had severe localized allergic reactions and 2% had severe systemic reactions resulting in anaphylactic shock. Thus, fire ants are not simply an aesthetic nuisance, but they can pose a significant threat to the health of cemetery visitors.

We recommend minimally that individual mounds be treated with a product such as Amdro (hydramethylnon). An even better approach is the use of Amdro as a broadcast fire ant bait while fire ants are foraging. After 10-14 days it should then be used as an individual mound treatment on any mounds that continue to be a problem. This approach should be used twice a year, typically in April or May and again in September or October. A good discussion is provided by <http://www.caes.uga.edu/applications/publications/files/pdf/B%2011912.PDF>.

Another issue at Cemetery 5 is the presence of animal burrows about 3-4 inches in diameter. These pose a significant trip hazard and should be periodically infilled.

Trees

The cemetery has had crepe myrtles, oaks, and palms planted along the drives. The crepe myrtles exhibit lichen, which may indicate that the plants are under stress. At least one shows evidence of a previous significant wound. That plant should be removed and replaced with an appropriately sized replacement.

All replacement trees should be of at least 1-inch caliper and meet the minimum requirements of the

Figure 71. Diseased crepe myrtle should be replaced.

American Nursery and Landscape Association's American Standard for Nursery Stock (ANSI Z60.1-2004).

Research is suggesting that trees, especially older mature trees, improve in health when turfgrass is removed under the branch spread and mulch is applied at a depth not exceeding 3 to 4-inches. This is a practice that could be productively employed at the cemetery. Staff should be closely supervised to prevent over mulching of vegetation.

It is also crucial in a cemetery context that trees be periodically inspected and pruned. We do not believe that either has occurred at Cemetery 5.

Trees should be inspected for potential threats to monuments, as well as general health.

Ideally these inspections should be made yearly and after any storm where the winds exceed 55 mph. They should be pruned to remove potentially hazardous dead wood on a yearly basis, but safe pruning every 5 years by a certified arborist is acceptable. Under no circumstances are tree climbers (hooks, spikes, gaffs) to be worn while ascending, descending, or working in trees to be pruned.

There are several trees that would benefit from pruning for either thinning or cleaning. Thinning is a technique of pruning that removes selected branches to increase light and air movement through the crown. This also decreases weight on heavy branches. The natural shape of the tree is retained and its overall health is improved. In cleaning, the pruning removes branches that are dead, dying, diseased, crowded, broken, or otherwise defective. This includes narrow crotches.

In pruning, branches should always be cut just beyond the branch collar (an extension of the main stem) and not flush with the trunk. Large branches should be removed with three cuts to prevent tearing of the bark, which can weaken the branch and lead to disease. All pruning within the cemetery should be performed by an ISA Certified Arborist.

Soil Testing

The hospital does not routinely conduct soil tests in its cemeteries. We recommend such tests be conducted every three to five years. The University of Florida Analytical Services Laboratories provides soil testing for \$10 (http://soilslab.ifas.ufl.edu/ESTL_pages/landscap_evegetable.htm). This is certainly affordable since only one test every five years is necessary.

A single test was collected as part of this assessment. The results are shown in Figure 72. Soil pH is slightly less than optimal (6.0) for most trees. Because of nitrate's transient nature, it is not generally part of the soil test. Phosphorus and potassium are very low to low. Calcium and magnesium levels are both high.

Established trees often do not require fertilization although the turf would benefit greatly. The pH is adequate and no additional liming is necessary this year. Additional tests should be conducted to monitor the situation.

It is recommended that 2.30 pounds of nitrogen be applied per 1,000 square feet. Phosphorus and potassium should each be supplemented at the rate of 0.70 pound per 1,000

around the cemetery.

It is especially important that all monuments be recovered from the woods and that the cemetery boundaries be carefully preserved.

We also identified a range of materials stored at the edge of the cemetery, including a pile of cast concrete monuments, concrete vaults, and

various sign posts. We have previously mentioned the abandoned committal shelter.

Those items that are necessary for the operation of the cemetery

should be neatly stored in a location that can be screened from cemetery visitors. Those items that are no longer necessary should be removed. For example, if the stacked concrete monuments are those that have been replaced with granite markers, the concrete monuments should be removed from the cemetery and destroyed. This is to prevent future confusion regarding the location of graves.

Figure 72. Soil test results for Cemetery 5.

square feet.

In order to minimize salt uptake by the stones, slow release organic fertilizers are preferable to commercial inorganic fertilizers. An excellent source explaining the differences between organic and inorganic fertilizers is <http://www.cmg.colostate.edu/gardennotes/234.pdf>.

The publication <http://pubsadmin.caes.uga.edu/files/pdf/C%20853.2.PDF> provides information on converting traditional inorganic fertilizer recommendations to safer organic recipes. Examples of organic fertilizers include blood meal for nitrogen, steamed bone meal for phosphorus, and sulfate of potash magnesia for potassium.

Edge Clearing

As previously mentioned, we recommend that the forest surrounding the cemetery be cut back 20-50 feet to provide clear exposure of all monuments (several of which are currently being overtaken by the woods), clear access for the cemetery fence, and a fire break

Figure 73. One of several markers about to be overtaken by woods. These areas must be reclaimed and integrated into the cemetery proper.

Figure 74. Maintenance issues at Cemetery 5. Upper left photo shows vaults; these should be screened from public view. Upper right photo shows presumably discarded concrete markers; these should be removed from the cemetery and destroyed. Lower left shows a spoil pile; this should also be screened from public view and should be located where vaults are kept. Lower right photo shows section markers; these should be removed from the cemetery grounds.

We also noted that there were several types of concrete vaults present and some appeared damaged. If these older vaults are not being used, they should be removed from the cemetery grounds – it is poor maintenance practice to allow damaged materials to remain.

It is important that the cemetery be organized to ensure that family and visitors feel the hospital is providing a sense of respect and dignity to those buried here.

Other Maintenance

Signage

Signage at Cemetery 5 is limited to green engraved plastic section markers set on mild steel posts. While clearly made in a local shop, the signs

are adequate. They are not, however, being adequately maintained. All of the markers require painting and at least one sign is broken and missing. This sort of minimal maintenance gives the cemetery a run-down appearance and may suggest to family and visitors that the hospital does not care about the condition of the cemetery.

From a cemetery preservation perspective, signage is of four basic types: identification, regulatory, informational, and interpretative. They are generally recommended in this same priority.

Identification signage might include the name of the cemetery and might also include the cemetery's date of founding and historic significance.

Figure 75. Section markers at Cemetery 5. All require painting and some require new signs.

We recommend identification signage at the entrance to the actual cemetery grounds (once the brick columns have been appropriately repaired). We do not recommend any identification signage at the entrance off U.S. 90 since this may attract too much attention to a cemetery that is remote and difficult to patrol. We do, however, recommend signage at U.S. 90 to indicate that the property is owned by the Florida State Hospital and that no trespassing is permitted. The signage should also indicate who to contact at the hospital for access since this is an operating cemetery.

The signage should be simple and dignified. If the hospital has a standardized system, the signage at Cemetery 5 should conform. Appropriate verbiage might be:

Florida State Hospital
Cemetery 5
Opened in 1932

Regulatory signage specifies laws, regulations, or expected standards of behavior. We recommend that the hospital develop signage dealing with, minimally, these issues (perhaps with some modifications of language as might be needed):

- The cemetery is open upon request to the Florida State Hospital, Office of Administrative Services. Any individual in the cemetery at other times is subject to arrest for trespass.
- Monuments in this cemetery are very old and may be easily damaged. Please refrain from leaning, sitting, or climbing on or handling any monument. All children must be escorted by an adult.
- Absolutely no alcoholic beverages, fireworks, or fire arms are allowed in the cemetery. Proper conduct is expected at all times.
- No pets are allowed in the cemetery.
- Flowers will be removed by the staff 10 days after holidays or when the arrangements become wilted and unsightly. No artificial flowers or plants are permitted.
- No plantings are allowed within the cemetery and the Florida State Hospital will enforce its right to remove any

plantings deemed inappropriate, diseased, or damaging the cemetery.

- For additional information concerning maintenance issues, please contact the Florida State Hospital, Office of Administrative Services at _____. In case of emergency contact _____.

This signage should be erected at the entrance to Cemetery 5. The fence surrounding the cemetery should have no trespassing signs attached prominently to clearly mark the property.

The last two types of signage are informational (for example, directional signs) and interpretative (information on historic people buried in the cemetery). The previously discussed green section signs are examples of informational signage. No interpretative signage is necessary at this time.

Other Public Outreach

We have previously explained that the Florida State Hospital needs to do a better job of providing information to the public, including

family members of those who died at the hospital. There is no information available concerning this cemetery – or any of the hospital cemeteries – on the Florida State Hospital website and genealogical message boards contain complaints about the difficulty in obtaining information.

We again recommend that the report be made publically available on the hospital's web site.

The hospital seems overly concerned with the confidentiality of those buried at Cemetery 5. We recommend that all burials before 1961 be included on the website. This adheres to a fairly standard 50 year rule. After 50 years it is reasonable and appropriate to make full disclosure of all burials.

Trash

Given the isolation of Cemetery 5 combined with the locked entrance we would not expect trash to be an issue. In spite of this we observed a pile of recent beer cans at the edge of the woods. If these represent disposal by staff, the hospital has a significant internal issue that needs

to be investigated. If they have been dumped by others on the property, the hospital should carefully review its policy regarding access.

In either event, trash must be collected and this requires that the hospital conduct routine maintenance. All debris, such as downed limbs as well as trash should be collected every time the grass is mowed at the cemetery.

Figure 76. Beer cans in the cemetery.

Conservation Issues

When this cemetery began the hospital had apparently abandoned the practice of using headboards. Instead graves began to be marked with cast concrete blocks that were embedded with an aluminum plate stamped with the burial number. This practice appears to have been followed for most of the cemetery's history. At some point, however, these cast monuments were abandoned in favor of more durable granite monuments with engraved numbers.

Figure 77. Monuments provided by the hospital. Upper photo shows the older cast concrete marker with aluminum tag. Lower photo shows granite marker.

Many of the cast concrete markers have been damaged and we recommend that the hospital escalate its efforts to replace damaged markers. A critical goal should be to ensure that every grave in this cemetery has a legible monument.

In addition to these institutional markers, the cemetery exhibits a wide range of commercial markers. Some are lawn markers of granite, bronze, and even marble. Some, however, were originally die on base markers; there is even one marble VA headstone. All of these have been laid flat by the hospital, we presume to facilitate maintenance. The only exception to this practice is a slant top granite marker that cannot be easily laid flat.

The practice of setting upright markers flat is not appropriate and should not continue. If the hospital wishes to limit the type of monuments that can be erected, this should be a policy statement that is provided to all families and only lawn markers should be permitted.

Some of the commercial monuments present in the cemetery are illustrated here in Figures 78-81. These illustrate the variety and condition present. They also reveal the extraordinary stories commemorated at Cemetery 5. For example, there is the monument of Cleve Futch who died in 1999 and received a monument from his friends in Unit 3. There is also the monument of Pearl Turner McKinney who died in 1952 and whose stone reveals it was set by a daughter in memory of "a mother who I never knew, with love."

Figure 78. Sample of commercial monuments at Cemetery 5. Upper row, Anna Stasek (April 8, 1883-October 27, 1959) and Arnold L. Braddock (1903-1935). Middle row, Ayres E. Booth, Sr. (May 24, 1890-December 10, 1966), Benjamin Mendoza (July 23, 1907-August 31, 1941). Bottom row, Charlie Amos Thomas (1886-1935), Cleve Futch (July 28, 1938 – March 22, 1995).

Figure 79. Sample of commercial monuments at Cemetery 5. Top row, Edd Williams (1885-1969), Elvira Agnes Levey (January 20, 1908 – May 14, 1952). Middle row, Emma J. Snowden (n.d. – January 23, 1966), Emmie Blanche Owens (August 31, 1881 – August 5, 1959). Bottom row, Franziska Preston (March 30, 1900 – February 23, 1947), Helen Mar DeVoy (1842-1938).

Figure 80. Sample of commercial monuments at Cemetery 5. Top row Ida Guggenheim (1897-1962), Infant McCoy Harris, Jr. (n.d.). Middle row, J.B. Mathews (n.d. – August 20, 1900), John J. Freeland (1883-1931). Bottom row, John Preuss (August 3, 1876 – March 3, 1959), Marion B. Catlett (September 12, 1911 – November 1, 1981).

Figure 81. Sample of commercial monuments at Cemetery 5. Upper row, Mary E. Moon (January 31, 1887 – May 28, 1968), Melvin Burkhalter (October 14, 1860 – September 14, 1927). Middle row, Myron E. Burlingame (n.d. - July 23, 1932), Pearl Turner McKinney (1890 – 1952). Bottom row, W.F. Horne (October 12, 1867 – November 4, 1904). The Horne stone predates Cemetery 5 and was moved from Cemetery 2.

Treatment

At the present time none of the monuments require treatment. We have previously recommended, however, that all damaged cast concrete markers in the cemetery be replaced with granite markers and that the hospital develop a policy to allow only lawn markers in order to prevent headstones from being laid flat.

Recommendations

Significance

Cemetery 5 is recommended eligible for the National Register of Historic Places under Criterion C, that the cemetery embodies the distinctive characteristics of a particular type – that of the institutional burial typified by hospitals and prisons. Fundamental is the minimalist landscape, the use of a formal grid design, and the use of lawn markers with only numbers. This criterion specifically notes that these characteristics may lack individual distinction, but nevertheless represent a significant and distinguishable entity when taken together.

Moreover, the cemetery meets Criteria Consideration D since it derives its primary importance from these design features as well as its association with the historic events associated with the development of mental illness treatment at the Florida State Hospital.

It is likely that this cemetery is also eligible under Criteria D, information potential. This cemetery, like others operated by the Florida State Hospital, has the potential to make significant bioanthropological contributions to our understanding of diet, disease, and associated osteological questions. Like Cemeteries 3 and 4, it is possible to link those buried in the cemetery with death certificates and other medical records that would contribute to the bioanthropological study.

Legal Protection

We have previously outlined the

provisions of Florida Statutes 872.02 and 872.05 which clearly apply to this cemetery.

Recommended Activities

The recommendations offered in this study relate primarily to the improvement of current operations.

We recommend that the hospital request the Florida Department of Highways to erect side road (W2-2) signs to the east and west of the cemetery road on U.S. 90 in order to improve the safety of the cemetery entrance.

We recommend that the hospital security detail place the cemetery on its periodic rounds. The cemetery should be visited at least weekly.

The use of movable committal shelters is an appropriate way to minimize the time and effort required to erect and remove tents. The shelter, however, should be removed from view when not in use. The dilapidated shelter at the edge of the cemetery degrades the cemetery's appearance and should be removed.

The entrance to the cemetery appears rundown and gives the cemetery visitor a poor first impression. The columns require immediate rebuilding. In order to maintain the historic integrity of the cemetery the columns should be rebuilt in kind, meaning the use of brick laid in an identical fashion.

The cemetery fence is in equally poor condition, having received no substantial maintenance in many years. It requires immediate replacement. Prior to this replacement we recommend that the woods surrounding the cemetery be cut back 30-50 feet in order to provide a buffer. This effort will also allow those graves being overtaken by the woods to be reclaimed.

Mowing conducted in the cemetery has damaged many of the monuments. In some cases monuments no longer have legible number plates. In other cases private monuments have been damaged. It is essential that the hospital exercise

greater care in the maintenance operations.

Damaged hospital monuments should be expeditiously replaced with granite markers. No grave should be allowed to go undocumented.

Fire ant mounds must be routinely treated. Animal burrows require periodic infilling.

The care of trees in the cemetery should be improved. At least one crepe myrtle is badly diseased and requires replacement. All trees should have grass below their drip line removed and mulch, no deeper than 3-4 inches, installed. Trees require yearly inspections and periodic pruning.

Debris at the edge of the cemetery, such as unused sign posts and replaced concrete markers, should be removed. Vaults and spoil should be stored neatly and shielded from public view by either privacy fencing or shrubbery.

The cemetery should have both identification and regulatory signage at its entrance. At the public road entrance, however, we recommend only that signage indicate that the

property is posted and that trespassers will be prosecuted.

The information generated by this study, especially the maps and Excel list of individuals buried in the cemetery – at least those prior to 1961 – should be made available to the public by incorporation into the Florida State Hospital website.

The cemetery does evidence some trash. The hospital should have in place a maintenance program to ensure that all such debris are collected prior to every mowing.

While no conservation treatments are necessary, the hospital should establish a policy that allows only lawn markers, thereby preventing the need to lay other types of markers horizontally. As previously noted, it is also critical that all graves be legibly marked.

Table 9 outlines these recommendations and the anticipated costs.

Activity	Estimated Cost	Notes
Priority 1		
Clear edge of cemetery	-	River Junction crew
Replace all illegible hospital markers	5,000.00	estimate for stones only
Rebuild columns at entrance	3,500.00	
Remove debris at cemetery edge	-	River Junction crew
Dismantle and remove abandoned shelter	-	River Junction crew
Move shelter from cemetery to edge	-	River Junction crew
Identification signage	500.00	
Regulatory signage	1,000.00	
Treat fire ant mounds, infill animal burrows	200.00	
	\$10,200.00	
Priority 2		
Place information on hospital website	-	
Install fence around cemetery	10,300.00	
Consolidate and shield vaults and spoil	500.00	River Junction crew
	\$10,800.00	
Priority 3		
Request DOT signage	-	
Improve maintenance and trash collection	-	
	\$0.00	
Estimated Total Budget	\$21,000.00	

Summary

This document provides a detailed reconstruction of the history associated with the Florida State Hospital cemeteries. It provides the results of an initial ground penetrating radar study at four of the five cemeteries. The report provides a detailed assessment and recommendations for each of the five cemeteries identified.

In addition, considerable effort was expended to update the map available for Cemetery 3 and create a map for Cemetery 4. These are provided in Appendix 1.

Finally, Appendix 2 contains a list of those identified as buried in Cemeteries 2-4. This list has been compiled from names found on the maps for Cemetery 2 and 3, as well as the various mortuary and undertaker books present at the Florida State Hospital. The patient files at the Florida State Archives were also used, although only a small portion of these voluminous records could be examined during this study. Of all the activities, the preparation of this list of burials was perhaps the most difficult since it required that multiple lists be merged and duplicate names (often misspelled) be identified. We believe that Appendix 2 provides as complete and accurate an account as is possible given the condition of the available records. It should dramatically help families whose loved ones died at the Florida State Hospital and we recommend that the list be made as widely available as possible.

Summary Recommendations

Individual report sections should be consulted for the detailed recommendations, as well as the justifications for the different observations. Our goal here is simply to highlight the most significant recommendations. We have, however, compiled all of the recommendation tables, reproduced below as Table 10.

Cemetery 1

This cemetery has been knowingly impacted by construction on at least two documented occasions, first in the 1950s and subsequently in 1978. Both times construction proceeded, even though the work was clearly affecting a cemetery. As a result today an undetermined amount of this cemetery – thought to be that of the Reconstruction era penitentiary – has been damaged or possibly destroyed. At least one structure has been built on top of this burial ground and utility lines too numerous to catalog have been run through it. There can be no justification for the damage done to this cemetery or the utter lack of respect shown to those buried here.

There is no option at this point other than the complete archaeological removal of the cemetery. This will allow the surviving remains to be reburied at a location where they are accessible and where they can be assured appropriate preservation. It will also allow the bioanthropological study of a unique population.

This removal will no doubt cause considerable disruption to the normal operations of River Junction. While unfortunate, these disruptions are a very minor cost to ensure that these remains are recovered and appropriately treated.

We recommend this cemetery eligible for inclusion on the National Register of Historic Places under Criterion D, information potential.

Cemetery 2

For years different websites have speculated that Cemetery 2 – associated with the Florida State Hospital between about 1897 and 1911 – had been moved. Between the historic

research and ground penetrating radar study, we are inclined to believe that the cemetery was, in fact, removed. While it appears to have been relocated to the “Richardson Place,” we do not know where on that 75.9 acre tract the burials were placed. It is also unclear how effective the removal in 1923 actually was – as evidenced by several anomalies identified during the ground penetrating radar study.

As a consequence, we are recommending a brief archaeological assessment to determine what evidence of the cemetery may remain and, especially, the thoroughness of the original disinterment effort.

This cemetery is recommended not eligible for inclusion on the National Register of Historic Places, at least based on the currently available information.

Cemetery 3

Cemetery 3 was used by the hospital between 1905 (when at least some sections of Cemetery 2 were filled) and 1927. Cemetery 3 also contains hospital burials between at least 1885 and 1891, suggesting that the southern portion of the cemetery (Division 6) may represent the first burial ground of the Florida State Hospital, dating from 1876 through 1897.

Within a few decades of its abandonment in 1927 the cemetery was effectively lost and the property was reclaimed by the woods.

Efforts are today underway to reclaim the cemetery. Our recommendations focus on how to achieve that goal and ensure that the property continues to be appropriately managed. Our recommendations, for example, include the need to create a permanent road to the cemetery, fence the property, establish necessary signage, develop long-term maintenance plans, and appropriately conserve the monuments that remain, including the monuments of two Army officers who died during the construction of the U.S. Arsenal in Chattahoochee.

While it is understandable that the

Florida State Hospital is focused on its mission to treat those residents suffering from mental illness, the hospital and staff have an equal obligation to ensure the dignity of those who died in their care. The care and preservation of this (and other cemeteries on the property) is therefore of equal importance and requires immediate attention.

Part of our recommendation is that this study, and especially the maps and lists of those buried by the hospital, are made widely available to the public.

The cemetery is recommended eligible for inclusion on the National Register of Historic Places not only under Criterion D (information potential), but also under Criterion C (distinctive characteristics).

Cemetery 4

Cemetery 4 was used by the hospital between about 1926 and 1931. It was located only about 350 yards from Cemetery 3, yet it became even more completely lost. It never received the attention that Cemetery 3 received, perhaps because it could not claim the burial of several junior Army officers. Nevertheless, it is of equal importance to the hospital and the public.

Many of the recommendations offered for Cemetery 3 are repeated for Cemetery 4. The burial ground must be cleared of vegetation, reasonable access must be provided, the cemetery must be fenced to create a clear visual barrier, the intrusion by Florida Power must be dealt with, signage is required, graves should be partially backfilled, and long-term maintenance must be undertaken. While many of these actions can be accomplished by work crews from River Junction, this cemetery, like the others, will require on-going financial support.

Cemetery 4 is recommended eligible for inclusion on the National Register of Historic Places under Criterion D (information potential).

Cemetery 5

This cemetery began being used by the hospital in about 1931, although it contains earlier

burials, at least some of which were removed by family members from Cemetery 4 in order to make them more accessible. Two were apparently relocated from Cemetery 2.

Since it is currently being used by the hospital, Cemetery 5 is in many ways in far better condition than the other burial grounds on the hospital property. Nevertheless, it presents a somewhat rundown appearance to the public and requires more dedicated maintenance. The woods require thinning and moving back from the edges of the cemetery since some burials are being overtaken. The cemetery requires a new fence, as well as the replacement of the brick columns at the entrance. Improvements in maintenance include greater care in mowing, collection of trash, removal of the abandoned committal shelter, and screening of vaults and spoil from the public. Fire ants and animal burrows require treatment.

We also recommend that maps of this cemetery, as well as names of those buried there prior to 1961, be made public by the hospital so that descendants can have easier access to the information.

Cemetery 5 is recommended eligible for inclusion on the National Register of Historic Places under Criterion C, distinctive characteristics.

Priorities and Costs

Table 10 outlines the priorities and costs by cemetery, for a total expenditure of \$366,350 for the five cemeteries.

For most cemeteries we have identified three priorities. These may be viewed in the context of a 5 year plan. Priority 1 items are those activities that should be done during the 2011-2012 or 2012-2013 fiscal years. Priority 2 items should be conducted during the fiscal years 2013-2014 or 2014-2015. Priority 3 items should be completed by end of the 2015-2016 fiscal year.

The single largest expenditure is \$230,000 for the disinterment of Cemetery 1 and that figure does not include reinterment nor does

it cover incidental costs for security measures, utility relocation, or building demolition at River Junction. This activity was not assigned a priority since it represents the only major activity at this cemetery. The action, however, has considerable importance, not only because the work has been delayed for more than 50 years, but also because the cost will only continue to escalate. ***Certainly no additional construction or activities should take place on the cemetery in the interim.***

Cemetery 2 costs account for an additional \$50,000, although this includes both a study to ascertain what might remain, as well as a survey to hopefully identify where those removed from Cemetery 2 were reburied. Again, no priority was assigned, although both should be considered a very high priority. Most particularly the hospital should do everything possible to determine where it reinterred the thousand or more souls thought to be removed from this cemetery.

Cemetery 3 has a budget of \$46,500, much of which (\$36,000) involves the conservation treatment of monuments in this cemetery. Cemetery 4 requires a total budget of \$14,050. Finally, Cemetery 5 requires an expenditure of \$20,800.

SUMMARY

Table 10.
Combined Priorities and Costs for Preservation Activities at Cemeteries 1-5

Cemetery 1	Activity	Estimated Cost	Notes
	Disinterment	230,000.00	
	Historical marker	5,000.00	
	Reinterment		Cost not established
	Estimated Total Budget		\$235,000.00
Cemetery 2	Activity	Estimated Cost	Notes
	Archaeological survey	20,000.00	
	Survey to identify location of cemetery	30,000.00	Confined to the Richardson Place
	Estimated Total Budget		\$50,000.00
Cemetery 3	Activity	Estimated Cost	Notes
Priority 1	Clear and mulch cemetery	-	River Junction crew
	Fill grave depressions	500.00	Sand only; River Junction crew
	Build road to cemetery	4,000.00	
	Build turn around and parking area	1,500.00	
	Install better gate	500.00	Materials only; River Junction crew
	Identification signage	500.00	
	Regulatory signage	1,000.00	
			\$8,000.00
Priority 2	Place information on hospital website	-	
	Install fence around cemetery	8,000.00	
	Conservation treatments to monuments	13,000.00	AIC Conservator
	Conservation treatments to headboards	15,000.00	AIC Conservator
			\$36,000.00
Priority 3	On-going maintenance of ground/road	2,000.00	Yearly
	On-going maintenance of monuments	500.00	Yearly
			\$2,500.00
	Estimated Total Budget		\$46,500.00
Cemetery 4	Activity	Estimated Cost	Notes
Priority 1	Clear and mulch cemetery	-	River Junction crew
	Fill grave depressions	300.00	Sand only; River Junction crew
	Build road to cemetery	1,650.00	
	Build turn around and parking area	1,500.00	
	Install gates at two entrances	1,000.00	Materials only; River Junction crew
	Identification signage	500.00	
	Regulatory signage	1,000.00	
	Contact Florida Power and ensure protection	-	
			\$5,950.00
Priority 2	Place information on hospital website	-	
	Install fence around cemetery	4,100.00	
	Conservation treatments to monuments	2,000.00	AIC Conservator
			\$6,100.00
Priority 3	On-going maintenance of ground/road	2,000.00	Yearly
			\$2,000.00
	Estimated Total Budget		\$14,050.00
Cemetery 5	Activity	Estimated Cost	Notes
Priority 1	Clear edge of cemetery	-	River Junction crew
	Replace all illegible hospital markers	5,000.00	Estimate for stones only
	Rebuild columns at entrance	3,500.00	
	Remove debris at cemetery edge	-	River Junction crew
	Dismantle and remove abandoned shelter	-	River Junction crew
	Move shelter from cemetery to edge	-	River Junction crew
	Identification signage	500.00	
	Regulatory signage	1,000.00	
	Treat fire ant mounds, infill animal burrows	200.00	
			\$10,200.00
Priority 2	Place information on hospital website	-	
	Install fence around cemetery	10,300.00	
	Consolidate and shield vaults and spoil	500.00	River Junction crew
			\$10,800.00
Priority 3	Request DOT signage	-	
	Improve maintenance and trash collection	-	
			\$0.00
	Estimated Total Budget		\$21,000.00
	Estimated Cemetery 1-5 Budget		\$366,550.00

Appendix 1. Documented Burials in Cemeteries 2, 3, and 4

From a historical perspective, the hospital sought to accomplish this same effort in the mid-1980s. A surviving memo dated December 17, 1986 from Faye Alcorn, then Assistant Hospital Administrator, is worth quoting:

The “Cemetery Project” has been on-going for a long period of time, and much effort has gone into having the maps completed and drawn as accurately as possible. However, we continue to have problems with families coming to visit grave sites and not having the exact location of the grave readily available to us because the project has not been completed.

Time frames must be set with your staff for completion of this project. As you are most familiar with the current projects assigned to the staff involved, set some realistic time frames and track these with your staff. The times are due in this office by January 16, 1987.

As I understand the current status of the project, Rodney Smith is in the process of drawing one of the completed sections of the cemetery, Gladys Rowan is still identifying names for the grave sites, and Champ James had his staff complete the verification of the grave numbers on the maps given to him. If this information is not current, provide the up-to-date information along with the time frames.

Thus, the current project is not the first time an effort has been made to cull through records and attempt some sort of comprehensive compilation. Sadly, the effort in the 1980s was not conducted by trained historians and while it is clear that they were sincere in their efforts, they simply did not have the background or training to accomplish the task. And while impatience is understandable, after examining the records ourselves, we can easily understand why the task seemed, to Ms. Alcorn, to drag on. The hospital had regrettably paid little effort to providing those who died under its care with the dignity that we would expect. Similar mismanagement of burial records by Arlington Cemetery and the U.S. Department of Veterans Affairs has caused extensive public outrage. No such outrage appears to have been expressed at losing the burial locations of those under the care of the Florida State Hospital.

Even before the “Cemetery Project” the problems were evident. Another note explains that in 1979 “some of the District people were going through the mortuary” and they suggested that the cemetery records “be moved to a safer place; that in their present location there was a danger of getting wet . . . it looked as though one or two might have gotten wet.”

This may at least partially account for gaps in years and the overall poor condition of the surviving records. As we examined the records, it became painfully clear that records that should be present were no longer extant – probably accidentally lost or intentionally destroyed.

We have recommended that all remaining records be immediately transferred to the State Archives of Florida where they can be appropriately preserved and made available to researchers.

The following list of burials is organized alphabetically to assist in locating the burial location of individuals we have been able to document with some degree of certainty as being buried in one of the Florida State Hospital cemeteries. We do not include Cemetery 5 since presumably the records for this cemetery are the most complete and well organized. We presume that the references in Ms. Alcorn's 1986 memo reference the Cemetery 5 maps.

Our list includes details on the cemetery such as the cemetery number, section, row, and grave. This information requires the use of the maps provided in Appendix 2. Since the organization of the cemeteries was not always consistent or precise, the use of this information may require a visit to the cemetery and some effort to identify the precise burial. We believe, however, that in most cases this can be accomplished.

The list also provides the death date (often several days prior to the burial date), and information on whether the individual was reported as male or female, white or "colored." We have retained the term "colored" since it likely included anyone not "white," i.e., Native American or other person of color. The age was included where readily available. The hospital, however, was not especially precise in recording age. We also include references for the information, allowing other researchers to back track and obtain additional information in some cases. Finally, the lists provide a "notes" column that includes additional information where available. We have also included original grave numbers since these may be referenced in some documents still held by the Florida State Hospital or by the Archives.

It is important to state that this compilation, while incorporating a very massive amount of data, should not be construed as comprehensive. For example, funds were not provided for us to examine all of the patient records housed by the State Archives of Florida as Record Group 841, Series 1063, Medical Records, 1914-1983. A sample were examined and they provided exceptional information, including telegrams and letters to and from families regarding deceased family members, burial instructions, and death certificates. These records account for over 179 cubic feet and require very careful attention and review. We hope that the Florida State Hospital will eventually fund careful examination of these records. Until they provide that funding, the attached list is as comprehensive as possible. It is also far more comprehensive than any previous list – including those documents routinely used by the hospital in its efforts to address family inquiries. We recommend that this list, and the associated map, be made widely available to the public so that families can once again be united.
